1. Scope

The scope of this document is limited to the Enabler Release Definition of the Charging Enabler V1.1 according to OMA Release process and the Enabler Release specification baseline listed in section 5.

3. Terminology and Conventions

3.1 Conventions

The key words “MUST”, “MUST NOT”, “REQUIRED”, “SHALL”, “SHALL NOT”, “SHOULD”, “SHOULD NOT”, “RECOMMENDED”, “MAY”, and “OPTIONAL” in this document are to be interpreted as described in [RFC2119].

All sections and appendixes, except “Scope” and “Introduction”, are normative, unless they are explicitly indicated to be informative.

The formal notation convention used in sections 8 and 9 to formally express the structure and internal dependencies between specifications in the Enabler Release specification baseline is detailed in [IOPPROC].

3.2 Definitions

**Enabler Release**
Collection of specifications that combined together form an enabler for a service area, e.g. a download enabler, a browsing enabler, a messaging enabler, a location enabler, etc. The specifications that are forming an enabler should combined fulfil a number of related market requirements.

**Minimum Functionality Description**
Description of the guaranteed features and functionality that will be enabled by implementing the minimum mandatory part of the Enabler Release.

For definitions of terms not found here, please refer to [OMADICT].

4. Release Version Overview

This document outlines the Enabler Release Definition for the Charging Enabler and the respective conformance requirements for clients and servers claiming compliance to it as defined by Open Mobile Alliance across the specification baseline.

The motivation for the creation of a Charging Enabler was established in the Work Item outlining the effort. The ability to charge for service usage is fundamental when creating services using OMA enablers.

4.1 Version 1.0 Functionality

The first version of the Enabler Release specifies the OMA Charging interfaces and a protocol binding to 3GPP Diameter Applications [TS32.299] based on IETF Diameter Accounting application [RFC3588] and IETF Diameter Credit-Control application [RFC4006].

4.2 Version 1.1 Functionality

The new version of the Enabler Release specifies how the OMA Charging interfaces MAY be exposed as a Payment API compliant with either the SOAP protocol binding of Parlay X Web Services Payment API as specified in [TS29.199-6] or with the HTTP protocol binding of RESTful Network API for Payment [REST NetAPI Payment].

The current version also includes technical refinements and changes to the maintenance of OMA Charging Data Elements [CHRG_DDS].
# 5. Document Listing for Charging V 1.1 Enabler

This section is normative.

6. OMNA Considerations

No OMNA items included in the release.

The OMA Charging Data Elements are defined in a specific data definition specification [CHRG_DDS].
7. Conformance Requirements Notation Details

This section is informative

The tables in following chapters use the following notation:

- **Item:** Entry in this column MUST be a valid ScrItem according to [SCRRULES].
- **Feature/Application:** Entry in this column SHOULD be a short descriptive label to the Item in question.
- **Status:** Entry in this column MUST accurately reflect the architectural status of the Item in question.
  - M means the Item is mandatory for the class
  - O means the Item is optional for the class
  - NA means the Item is not applicable for the class
- **Requirement:** Expression in the column MUST be a valid TerminalExpression according to [IOPPROC] and it MUST accurately reflect the architectural requirement of the Item in question.
8. ERDEF for Charging Enabler - Client Requirements

This section is normative.

<table>
<thead>
<tr>
<th>Item</th>
<th>Feature / Application</th>
<th>Requirement</th>
</tr>
</thead>
