

**Enabler Release Definition for SyncML Common
Specifications, version 1.1.2**
Approved Version 12-June-2003

Open Mobile Alliance
OMA-ERELED-SyncML-Common-v1_1_2-20030612-A

Continues the Technical Activities
Originated in the SyncML Initiative

Use of this document is subject to all of the terms and conditions of the Use Agreement located at <http://www.openmobilealliance.org/UseAgreement.html>.

Unless this document is clearly designated as an approved specification, this document is a work in process, is not an approved Open Mobile Alliance™ specification, and is subject to revision or removal without notice.

You may use this document or any part of the document for internal or educational purposes only, provided you do not modify, edit or take out of context the information in this document in any manner. Information contained in this document may be used, at your sole risk, for any purposes. You may not use this document in any other manner without the prior written permission of the Open Mobile Alliance. The Open Mobile Alliance authorizes you to copy this document, provided that you retain all copyright and other proprietary notices contained in the original materials on any copies of the materials and that you comply strictly with these terms. This copyright permission does not constitute an endorsement of the products or services. The Open Mobile Alliance assumes no responsibility for errors or omissions in this document.

Each Open Mobile Alliance member has agreed to use reasonable endeavors to inform the Open Mobile Alliance in a timely manner of Essential IPR as it becomes aware that the Essential IPR is related to the prepared or published specification. However, the members do not have an obligation to conduct IPR searches. The declared Essential IPR is publicly available to members and non-members of the Open Mobile Alliance and may be found on the “OMA IPR Declarations” list at <http://www.openmobilealliance.org/ipr.html>. The Open Mobile Alliance has not conducted an independent IPR review of this document and the information contained herein, and makes no representations or warranties regarding third party IPR, including without limitation patents, copyrights or trade secret rights. This document may contain inventions for which you must obtain licenses from third parties before making, using or selling the inventions. Defined terms above are set forth in the schedule to the Open Mobile Alliance Application Form.

NO REPRESENTATIONS OR WARRANTIES (WHETHER EXPRESS OR IMPLIED) ARE MADE BY THE OPEN MOBILE ALLIANCE OR ANY OPEN MOBILE ALLIANCE MEMBER OR ITS AFFILIATES REGARDING ANY OF THE IPR'S REPRESENTED ON THE “OMA IPR DECLARATIONS” LIST, INCLUDING, BUT NOT LIMITED TO THE ACCURACY, COMPLETENESS, VALIDITY OR RELEVANCE OF THE INFORMATION OR WHETHER OR NOT SUCH RIGHTS ARE ESSENTIAL OR NON-ESSENTIAL.

THE OPEN MOBILE ALLIANCE IS NOT LIABLE FOR AND HEREBY DISCLAIMS ANY DIRECT, INDIRECT, PUNITIVE, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES ARISING OUT OF OR IN CONNECTION WITH THE USE OF DOCUMENTS AND THE INFORMATION CONTAINED IN THE DOCUMENTS.

1. Scope

The scope of this document is limited to the Enabler Release Definition of the SyncML Common Specifications which provide support for both OMA Data Synchronization (DS) and OMA Device Management (DM) according to OMA Release process and the Enabler Release specification baseline listed in section 5. The Open Mobile Alliance SyncML Common v1.1.2 specifications are based on the SyncML Initiative's v1.1.1 specifications.

The SyncML Initiative, Ltd. was a not-for-profit corporation formed by a group of companies who co-operated to produce an open specification for data synchronization and device management. Prior to SyncML, data synchronization and device management had been based on a set of different, proprietary protocols, each functioning only with a very limited number of devices, systems and data types. These non-interoperable technologies have complicated the tasks of users, manufacturers, service providers, and developers. Further, a proliferation of different, proprietary data synchronization and device management protocols has placed barriers to the extended use of mobile devices, has restricted data access and delivery and limited the mobility of the users.

SyncML is a specification that contains the following main components:

- An XML-based representation protocol
- A synchronization protocol and a device management protocol
- Transport bindings for the protocol

The data representation specifies an XML DTD that allows the representation of all the information required to perform synchronization or device management, including data, metadata and commands. The synchronization and device management protocols specify how SyncML messages conforming to the DTD are exchanged in order to allow a SyncML client and server to exchange additions, deletes, updates and other status information.

There are also DTDs that define the representation of information about the device such as memory capacity, and the representation of various types of Meta information such as security credentials.

Although the SyncML specification defines transport bindings that specify how to use a particular transport to exchange messages and responses, the SyncML representation, synchronization and device management protocols are transport-independent. Each SyncML package is completely self-contained, and could in principle be carried by any transport. The initial bindings specified are HTTP, WSP and OBEX, but there is no reason why SyncML could not be implemented using email or message queues, to list only two alternatives. Because SyncML messages are self-contained, multiple transports may be used without either the server or client devices having to be aware of the network topology. Thus, a short-range OBEX connection could be used for local connectivity, with the messages being passed on via HTTP to an Internet-hosted synchronization server.

To reduce the data size, a binary coding of SyncML based on the WAP Forum's WBXML is defined. Messages may also be passed in clear text if required. In this and other ways SyncML addresses the bandwidth and resource limitations imposed by mobile devices.

SyncML is both data type and data store independent. SyncML can carry any data type that can be represented as a MIME object. To promote interoperability between different implementations of SyncML, the specification includes the representation formats used for common PIM data.

The OMA SyncML Common Specifications v1.1.2 Enabler Release includes the following types of documents:

- The XML-based representation protocol which specifies the common XML syntax and semantics used by all SyncML protocols and is the superset of the DS and DM representation protocols
- The transport bindings
- The Meta Information associated with a SyncML command or data item or collection used by all SyncML protocols

2.2 Informative References

None

3. Terminology and Conventions

3.1 Conventions

The key words “MUST”, “MUST NOT”, “REQUIRED”, “SHALL”, “SHALL NOT”, “SHOULD”, “SHOULD NOT”, “RECOMMENDED”, “MAY”, and “OPTIONAL” in this document are to be interpreted as described in [RFC2119].

All sections and appendixes, except “Scope” and “Introduction”, are normative, unless they are explicitly indicated to be informative.

The formal notation convention used in sections 8 and 9 to formally express the structure and internal dependencies between specifications in the Enabler Release specification baseline is detailed in [CREQ].

3.2 Definitions

Data Synchronization –The act of establishing an equivalence between two data collections, where each data element in one item maps to a data item in the other, and their data is equivalent.

Enabler Release –a collection of specifications that combined together form an enabler for a service area, e.g. a download enabler, a browsing enabler, a messaging enabler, a location enabler, etc. The specifications that are forming an enabler should combined fulfill a number of related market requirements.

Minimum Functionality Description – Description of the guaranteed features and functionality that will be enabled by implementing the minimum mandatory part of the Enabler Release.

3.3 Abbreviations

DS	Data Synchronization
DTD	Document Type Definition
ERDEF	Enabler Requirement Definition
ERELED	Enabler Release Definition
OMA	Open Mobile Alliance
SCR	Static Conformance Requirements
SyncML	Synchronization Mark-up Language
XML	Extensible Mark-up Language

4. Introduction

This document outlines the Enabler Release Definition for the SyncML Common Specifications and the respective conformance requirements for client and server implementations claiming compliance to the Open Mobile Alliance DS and DM v1.1.2 specifications.

The Common Specifications include documents which define the binding requirements for communicating SyncML over various transports. Although SyncML is transport independent, a set of common bindings is defined to encourage interoperability.

The SyncML representation protocol is defined by a set of messages that are conveyed between entities participating in a SyncML operation. The messages are represented as an XML document. The SyncML Representation Protocol document in the Common Specifications defines the logical structure and format of various SyncML messages which are used by DS, DM or both. The SyncML representation protocol supports protocol models that are based on a request/response command structure, as well as those that are based on a "blind push" command structure.

Meta Information which is used to convey characteristics of the data object to be synced or managed (eg. Maximum size, format, type) or of the datastore (memory, state) is defined in another of the Common Specifications.

5. Enabler Release Specification Baseline

The following section comprises the Common specifications in the OMA DS v1.1.2 enabler release. The name Common was used in the SyncML Initiative to describe this set of documents because they are used both by SyncML Data Synchronization and SyncML Device Management.

Description	Document Reference

SyncML OBEX Information, Open Mobile Alliance™, OMA-SyncML-OBEXInfo-V1_1_2, URL: http://www.openmobilealliance.org/tech/docs	[SYNCOBEX]
SyncML WSP Binding Specification, Open Mobile Alliance™, OMA-SyncML-WSPBinding-V1_1_2, URL: http://www.openmobilealliance.org/tech/docs	[SYNCWSP]

6. Minimum Functionality Description for the Common Specifications

This section is informative.

6.1 Minimum Functionality of Client Implementations using the Common Specifications

This section is informative.

The list of minimum functionality for a DS or DM client using the Common Specifications is very numerous. Please refer to the Enabler Release specification baseline listed in section 5

6.2 Minimum Functionality of Server Implementations using the Common Specifications

This section is informative.

The list of minimum functionality for a DS or DM server using the Common Specifications is very numerous. Please refer to the Enabler Release specification baseline listed in section 5

7. Conformance Requirements Notation Details

This section is informative

The tables in following chapters use the following notation:

Item:

Entry in this column **MUST** be a valid ScrItem according to [CREQ].

Feature/Application:

Entry in this column **SHOULD** be a short descriptive label to the **Item** in question.

Status:

Entry in this column **MUST** accurately reflect the architectural status of the **Item** in question.

- M means the **Item** is mandatory for the class
- O means the **Item** is optional for the class
- NA means the **Item** is not applicable for the class

Requirement:

Expression in the column **MUST** be a valid TerminalExpression according to [CREQ] and it **MUST** accurately reflect the architectural requirement of the **Item** in question.

8. ERDEF for Common Specifications - Client Requirements

This section is normative.

Table 1 ERDEF for Common Specifications Client-side Requirements

Item	Feature / Application	Status	Requirement
OMA-ERDEF-DS-C-001	Client	M	See static conformance requirements contained within specifications detailed by the Enabler Release specification baseline listed in section 5

9. ERDEF for Common Specifications - Server Requirements

This section is normative.

Table 2 ERDEF for Common Specifications Server-side Requirements

Item	Feature / Application	Status	Requirement
OMA-ERDEF-DS-S-001	Server	M	See static conformance requirements contained within specifications detailed by the Enabler Release specification baseline listed in section 5
