RESTful Network API for
Device Capabilities
Candidate Version 1.0 – 12 Feb 2013

Open Mobile Alliance
OMA-TS-REST_NetAPI_DeviceCapabilities-V1_0-20130212-C
Contents

1. SCOPE ............................................................................................................................................................................ 7
2. REFERENCES ........................................................................................................................................................................ 8
   2.1 NORMATIVE REFERENCES ................................................................................................................................................ 8
   2.2 INFORMATIVE REFERENCES ............................................................................................................................................ 8
3. TERMINOLOGY AND CONVENTIONS ............................................................................................................................. 9
   3.1 CONVENTIONS ............................................................................................................................................................... 9
   3.2 DEFINITIONS ............................................................................................................................................................... 9
   3.3 ABBREVIATIONS ........................................................................................................................................................ 9
4. INTRODUCTION ............................................................................................................................................................... 10
   4.1 VERSION 1.0 ............................................................................................................................................................... 10
5. DEVICE CAPABILITIES API DEFINITION .......................................................................................................................... 11
   5.1 RESOURCES SUMMARY .................................................................................................................................................... 11
   5.2 DATA TYPES ............................................................................................................................................................... 16
      5.2.1 XML Namespaces ..................................................................................................................................................... 16
      5.2.2 Structures ............................................................................................................................................................... 16
         5.2.2.1 Type: DeviceCapabilities ..................................................................................................................................... 16
         5.2.2.2 Type: DeviceCapabilitiesNotification ............................................................................................................ 16
         5.2.2.3 Type: DeviceCapabilitiesCancellationNotification ........................................................................................ 17
         5.2.2.4 Type: ConfigurationHistoryEntry ..................................................................................................................... 17
         5.2.2.5 Type: DeviceConfigurationHistoryList .......................................................................................................... 18
         5.2.2.6 Type: DeviceConfiguration .................................................................................................................................. 18
         5.2.2.7 Type: DeviceConfigurationList ........................................................................................................................ 18
         5.2.2.8 Type: DeviceCapabilitiesChangeSubscriptionList ............................................................................................ 19
         5.2.2.9 Type: DeviceCapabilitiesChangeSubscription ................................................................................................. 19
      5.2.3 Enumerations .......................................................................................................................................................... 20
      5.2.4 Values of the Link “rel” attribute ................................................................................................................................... 20
6. DETAILED SPECIFICATION OF THE RESOURCES .................................................................................................................. 25
   6.1 RESOURCE: DEVICE CAPABILITIES .................................................................................................................................................. 25
      6.1.1 Request URL variables ............................................................................................................................................ 25
      6.1.2 Response Codes and Error Handling ................................................................................................................... 25
      6.1.3 GET ...................................................................................................................................................................... 26
         6.1.3.1 Example: Retrieve device capabilities (Informative) .......................................................................................... 26
            6.1.3.1.1 Request ......................................................................................................................................................... 26
            6.1.3.1.2 Response ..................................................................................................................................................... 26
      6.1.4 PUT ....................................................................................................................................................................... 26
      6.1.5 POST ..................................................................................................................................................................... 26
      6.1.6 DELETE ............................................................................................................................................................... 26
   6.2 RESOURCE: SUBSCRIPTIONS FOR DEVICE CAPABILITIES CHANGES NOTIFICATIONS .................................................................................................................. 26
      6.2.1 Request URL variables ............................................................................................................................................ 27
      6.2.2 Response Codes and Error Handling ................................................................................................................... 27
      6.2.3 GET ...................................................................................................................................................................... 27
         6.2.3.1 Example: Retrieve list of subscriptions (Informative) ........................................................................................ 27
            6.2.3.1.1 Request ......................................................................................................................................................... 27
            6.2.3.1.2 Response ..................................................................................................................................................... 27
      6.2.4 PUT ....................................................................................................................................................................... 28
      6.2.5 POST ..................................................................................................................................................................... 28
         6.2.5.1 Example 1: Subscribe to device capabilities changes notifications for single device using ‘tel’ URI (Informative) .................................................................................................................. 28
            6.2.5.1.1 Request ......................................................................................................................................................... 28
            6.2.5.1.2 Response ..................................................................................................................................................... 28

6.2.5.2 Example 2: Subscribe to device capabilities changes notifications for single device using 'acr' URI (Informative) .......................................................... 29
6.2.5.2.1 Request ......................................................................................................................... 29
6.2.5.2.2 Response ..................................................................................................................... 29
6.2.5.3 Example 3: Subscribe to device capabilities changes notifications for group of devices (Informative) .......................................................... 30
6.2.5.3.1 Request ......................................................................................................................... 30
6.2.5.3.2 Response ..................................................................................................................... 30
6.2.5.4 Example 4: Subscribe to device capabilities changes notifications for single device (with resource reference instead of full resource representation in the response body) (Informative) .......................................................... 31
6.2.5.4.1 Request ......................................................................................................................... 31
6.2.5.4.2 Response ..................................................................................................................... 31
6.2.6 DELETE ................................................................................................................................................. 31

6.3 Resource: Individual Subscription for Device Capabilities Changes Notifications ........................................................................................................................................ 32

6.3.1 GET ......................................................................................................................................................... 32
6.3.2 GET ......................................................................................................................................................... 32
6.3.3 GET ......................................................................................................................................................... 32
6.3.4 PUT ......................................................................................................................................................... 32
6.3.5 POST ....................................................................................................................................................... 32
6.3.6 DELETE ................................................................................................................................................... 32
6.3.6.1 Example: Delete subscription (Informative) ........................................................................... 32
6.3.6.1.1 Request .......................................................................................................................... 32
6.3.6.1.2 Response ......................................................................................................................... 32

6.4 Resource: Notification on Device Capabilities Changes ......................................................................................................................................................... 33

6.4.1 GET ......................................................................................................................................................... 33
6.4.2 GET ......................................................................................................................................................... 33
6.4.3 GET ......................................................................................................................................................... 33
6.4.4 PUT ......................................................................................................................................................... 33
6.4.5 POST ....................................................................................................................................................... 33
6.4.5.1 Example 1: Device capabilities changes notification (Informative) ................................................. 34
6.4.5.1.1 Request .......................................................................................................................... 34
6.4.5.1.2 Response ......................................................................................................................... 34
6.4.5.2 Example 2: End of changes notification (Informative) ...................................................................... 35
6.4.5.2.1 Request .......................................................................................................................... 35
6.4.5.2.2 Response ......................................................................................................................... 35
6.4.5.3 Example 3: Error notification (notification cancellation) (Informative) .................................................. 36
6.4.5.3.1 Request .......................................................................................................................... 36
6.4.5.3.2 Response ......................................................................................................................... 36
6.4.6 DELETE ................................................................................................................................................... 36

6.5 Resource: Device Configuration ................................................................................................................................................................................................. 36

6.5.1 GET .......................................................................................................................................................... 36
6.5.2 GET .......................................................................................................................................................... 36
6.5.3 GET .......................................................................................................................................................... 36
6.5.4 PUT .......................................................................................................................................................... 36
6.5.5 POST ........................................................................................................................................................ 36
6.5.5.1 Example 1: Push configuration to single device (Informative) ......................................................... 37
6.5.5.1.1 Request .......................................................................................................................... 37
6.5.5.1.2 Response ......................................................................................................................... 37
6.5.5.2 Example 2: Push configuration to group of devices (Informative) ...................................................... 37
6.5.5.2.1 Request .......................................................................................................................... 37
6.5.5.2.2 Response ......................................................................................................................... 37
6.5.6 DELETE ................................................................................................................................................... 37

6.6 Resource: Available Configurations ................................................................................................................................................................................................. 38

6.6.1 GET .......................................................................................................................................................... 38
6.6.2 GET .......................................................................................................................................................... 38
6.6.3 GET .......................................................................................................................................................... 38
6.6.3.1 Example: Retrieve available device configurations (Informative) ...................................................... 38
6.6.3.1.1 Request .......................................................................................................................... 38
6.6.3.1.2 Response ......................................................................................................................... 38
6.6.4 GET .......................................................................................................................................................... 38

  6.7.3.1 Example: Retrieve configuration history (Informative) ........................................................................... 40
  6.7.3.1.1 Request .................................................................................................................................................. 40
  6.7.3.1.2 Response ............................................................................................................................................. 40
6.7.4 PUT ............................................................................................................................................................... 41
6.7.5 POST ............................................................................................................................................................. 41
6.7.6 DELETE ......................................................................................................................................................... 41

7. FAULT DEFINITIONS ........................................................................................................................................... 42
7.1 SERVICE EXCEPTIONS ....................................................................................................................................... 42
7.2 POLICY EXCEPTIONS ......................................................................................................................................... 42

APPENDIX A. CHANGE HISTORY (INFORMATIVE) ................................................................................................. 43
A.1 APPROVED VERSION HISTORY .......................................................................................................................... 43
A.2 DRAFT/CANDIDATE VERSION 1.0 HISTORY .................................................................................................... 43

APPENDIX B. STATIC CONFORMANCE REQUIREMENTS (NORMATIVE) ................................................................. 45
B.1 SCR FOR REST.DevCap SERVER .......................................................................................................................... 45
  B.1.1 SCR for REST.DevCap.AccCap Server ........................................................................................................... 45
  B.1.2 SCR for REST.DevCap.List.Subscr Server ................................................................................................... 45
  B.1.3 SCR for REST.DevCap.Individual.Subscr Server ........................................................................................ 45
  B.1.4 SCR for REST.DevCap.Notif Server ............................................................................................................. 46
  B.1.5 SCR for REST.DevCap.AccConfig Server .................................................................................................. 46

APPENDIX C. APPLICATION/X-WWW-FORM-URLENCODED REQUEST FORMAT FOR POST OPERATIONS (NORMATIVE) .................................................................................................................. 47
C.1 START DEVICE CAPABILITIES CHANGES NOTIFICATIONS ............................................................................. 47
  C.1.1 Example 1, using ‘tel’ URI (Informative) ........................................................................................................ 48
    C.1.1.1 Request .................................................................................................................................................... 48
    C.1.1.2 Response ............................................................................................................................................... 48
  C.1.2 Example 2, using ‘acr’ URI (Informative) ..................................................................................................... 48
    C.1.2.1 Request ................................................................................................................................................... 48
    C.1.2.2 Response ............................................................................................................................................... 49
C.2 PUSH A CONFIGURATION TO A DEVICE ........................................................................................................... 49
  C.2.1 Example (Informative) .................................................................................................................................. 49
    C.2.1.1 Request ................................................................................................................................................... 49
    C.2.1.2 Response ............................................................................................................................................... 50

APPENDIX D. JSON EXAMPLES (INFORMATIVE) ...................................................................................................... 51
D.1 RETRIEVE DEVICE CAPABILITIES (SECTION 6.1.3.1) ...................................................................................... 51
D.2 RETRIEVE LIST OF SUBSCRIPTIONS (SECTION 6.2.3.1) .................................................................................. 51
D.3 SUBSCRIBE TO DEVICE CAPABILITIES CHANGES NOTIFICATIONS FOR SINGLE DEVICE USING ‘TEL’ URI (SECTION 6.2.5.1) ................................................................................................................... 52
D.4 SUBSCRIBE TO DEVICE CAPABILITIES CHANGES NOTIFICATIONS FOR SINGLE DEVICE USING ‘ACR’ URI (SECTION 6.2.5.2) .................................................................................................................................................. 52
D.5 RETRIEVE SUBSCRIPTION (SECTION 6.3.3.1) ................................................................................................... 53
D.6 DELETE SUBSCRIPTION (SECTION 6.3.6.1) ......................................................................................................... 54
D.7 DEVICE CAPABILITIES CHANGES NOTIFICATION (SECTION 6.4.5.1) .......................................................... 54
D.8 END OF CHANGES NOTIFICATION (SECTION 6.4.5.2) ..................................................................................... 55
D.9 ERROR NOTIFICATION (NOTIFICATION CANCELLATION) (SECTION 6.4.5.3) .................................................. 56
D.10 PUSH CONFIGURATION TO SINGLE DEVICE (SECTION 6.5.5.1) .................................................................. 56
D.11 RETRIEVE AVAILABLE DEVICE CONFIGURATIONS (SECTION 6.6.3.1) .................................................. 57
D.12 RETRIEVE CONFIGURATION HISTORY (SECTION 6.7.3.1) ........................................................................ 58

APPENDIX E. PARLAY X OPERATIONS MAPPING (INFORMATIVE) .............................................................................. 60

APPENDIX F. LIGHT-WEIGHT RESOURCES (INFORMATIVE) ...................................................................................... 61
APPENDIX G.  AUTHORIZATION ASPECTS (NORMATIVE) ................................................................. 62

3. Terminology and Conventions

3.1 Conventions

The key words “MUST”, “MUST NOT”, “REQUIRED”, “SHALL”, “SHALL NOT”, “SHOULD”, “SHOULD NOT”, “RECOMMENDED”, “MAY”, and “OPTIONAL” in this document are to be interpreted as described in [RFC2119].

All sections and appendixes, except “Scope” and “Introduction”, are normative, unless they are explicitly indicated to be informative.

3.2 Definitions

For the purpose of this TS, all definitions from the OMA Dictionary apply [OMADICT].

<table>
<thead>
<tr>
<th>Client-side Notification URL</th>
<th>An HTTP URL exposed by a client, on which it is capable of receiving notifications and that can be used by the client when subscribing to notifications.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Notification Channel</td>
<td>A channel created on the request of the client and used to deliver notifications from a server to a client. The channel is represented as a resource and provides means for the server to post notifications and for the client to receive them via specified delivery mechanisms.</td>
</tr>
<tr>
<td>Notification Server</td>
<td>A server that is capable of creating and maintaining Notification Channels.</td>
</tr>
<tr>
<td>Server-side Notification URL</td>
<td>An HTTP URL exposed by a Notification Server, that identifies a Notification Channel and that can be used by a client when subscribing to notifications.</td>
</tr>
</tbody>
</table>

4. Introduction

The Technical Specification for the RESTful Network API for Device Capabilities contains the HTTP protocol binding based on the Parlay X Device Capabilities Web Services [3GPP 29.199-18] specification, using the REST architectural style. The specification provides resource definitions, the HTTP verbs applicable for each of these resources, and the element data structures, as well as support material including flow diagrams and examples using the various supported message body formats (i.e. XML, JSON, and application/x-www-form-urlencoded).

4.1 Version 1.0

The RESTful Network API for Device Capabilities V1.0 is a republication of the ParlayREST Device Capabilities API V1.0 [ParlayREST_DeviceCapabilities] as part of the suite of OMA RESTful Network APIs. Bug fixes and structural changes to fit that suite, but also functional changes have been applied.

Version 1.0 of the RESTful Network API for Device Capabilities keeps supporting the following operations:

- Retrieve device capabilities
- Create a subscription for device capabilities change notifications (for a single device or a group of devices)
- Send a notification on device capabilities changes to a subscribed application
- Set device configuration (for a single device or a group of devices)
- Retrieve available configurations for a given device model
- Retrieve configuration history for a given device

The following new functionality has been introduced:

- Support for scope values used with authorization framework defined in [Autho4API_10]
- Support for Anonymous Customer Reference (ACR) as an end user identifier
- Support for “acr:auth” as a reserved keyword in a resource URL variable that identifies an end user
5. Device Capabilities API definition

This section is organized to support a comprehensive understanding of the RESTful Device Capabilities API design. It specifies the definition of all resources, definition of all data structures, and definitions of all operations permitted on the specified resources.

The Device Capabilities API will allow applications to retrieve information about device capabilities and push device configuration to a device. Applications can subscribe to notifications of device capabilities changes for one or more devices. In addition, the Device Capabilities API provides applications with the ability to obtain the available device configurations for a given device model, as well as the configuration history for a given device.

Common data types, naming conventions, fault definitions and namespaces are defined in [REST_NetAPI_Common].

The remainder of this document is structured as follows:

Section 5 starts with a diagram representing the resources hierarchy, followed by a table listing all the resources (and their URL) used by this API, along with the data structure and the supported HTTP verbs (section 5.1). What follows are the data structures (section 5.2). A sample of typical use cases is included in section 5.3, described as high level flow diagrams.

Section 6 contains the detailed specification for each of the resources. Each such subsection defines the resource, the request URL variables that are common for all HTTP methods, and the supported HTTP verbs. For each supported HTTP verb, a description of the functionality is provided, along with an example of a request and an example of a response. For each unsupported HTTP verb, the returned HTTP error status is specified, as well as what should be returned in the Allow header.

All examples in section 6 use XML as the format for the message body. Application/x-www-form-urlencoded examples are provided in Appendix C, while JSON examples are provided in Appendix C.

Section 7 contains fault definition details such as Service Exceptions and Policy Exceptions.

Appendix B provides the Static Conformance Requirements (SCR).

Appendix E lists the Parlay X equivalent operation for each supported REST resource and method combination, where applicable.

Appendix F provides a list of all light-weight resources, where applicable.

Appendix G defines authorization aspects to control access to the resources defined in this specification.

Note: Throughout this document client and application can be used interchangeably.

5.1 Resources Summary

This section summarizes all the resources used by the RESTful Device Capabilities API.

The "apiVersion" URL variable SHALL have the value "v1" to indicate that the API corresponds to this version of the specification. See [REST_NetAPI_Common] which specifies the semantics of this variable.

The figure below visualizes the resource structure defined by this specification. Note that those nodes in the resource tree which have associated HTTP methods defined in this specification are depicted by solid boxes.
Figure 1 Resource structure defined by this specification
The following tables give a detailed overview of the resources defined in this specification, the data type of their representation and the allowed HTTP methods.
### Purpose: to allow client to retrieve device capabilities

<table>
<thead>
<tr>
<th>Resource</th>
<th>URL Base URL:</th>
<th>Data Structures</th>
<th>HTTP verbs</th>
</tr>
</thead>
<tbody>
<tr>
<td>Device capabilities</td>
<td>http://{serverRoot}/devicecapabilities/{apiVersion}</td>
<td>DeviceCapabilities</td>
<td>retrieve capabilities of the identified device</td>
</tr>
</tbody>
</table>

### Purpose: to allow client to manage subscriptions for device capabilities changes notifications

<table>
<thead>
<tr>
<th>Resource</th>
<th>URL Base URL:</th>
<th>Data Structures</th>
<th>HTTP verbs</th>
</tr>
</thead>
<tbody>
<tr>
<td>Subscriptions for device capabilities changes notifications</td>
<td>http://{serverRoot}/devicecapabilities/{apiVersion}</td>
<td>DeviceCapabilitiesChangeSubscriptionList common:ResourceReference (optional alternative for POST response) DeviceCapabilitiesChangeSubscription (used for POST)</td>
<td>retrieve the list of device capabilities changes subscriptions for the identified device(s) GET: no, PUT: create a new device capabilities changes subscription for the identified device(s), DELETE: no</td>
</tr>
<tr>
<td>Individual subscription for device capabilities changes notifications</td>
<td>http://{serverRoot}/devicecapabilities/{apiVersion}</td>
<td>DeviceCapabilitiesChangeSubscription</td>
<td>retrieve an individual device capabilities changes subscription for the identified device(s)</td>
</tr>
</tbody>
</table>
**Purpose:** to allow client to receive notifications about changes in device capabilities

<table>
<thead>
<tr>
<th>Resource</th>
<th>URL</th>
<th>Data Structures</th>
<th>HTTP verbs</th>
</tr>
</thead>
<tbody>
<tr>
<td>Notification on device capabilities changes</td>
<td>&lt;specified by the client when subscription is created or during provisioning process&gt;</td>
<td>DeviceCapabilitiesNotification DeviceCapabilitiesCancellationNotification</td>
<td>GET</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>no</td>
</tr>
</tbody>
</table>

**Purpose:** to allow client to configure a device, retrieve available configurations for a device and retrieve history of configurations

<table>
<thead>
<tr>
<th>Resource</th>
<th>URL</th>
<th>Data Structures</th>
<th>HTTP verbs</th>
</tr>
</thead>
<tbody>
<tr>
<td>Device configuration</td>
<td>/{equipmentId}/configuration</td>
<td>DeviceConfiguration</td>
<td>GET</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>no</td>
</tr>
<tr>
<td>Available configurations</td>
<td>/{equipmentId}/configuration/available</td>
<td>DeviceConfigurationList</td>
<td>retrieve available configurations for the identified device</td>
</tr>
<tr>
<td>Configuration history</td>
<td>/{equipmentId}/configuration/history</td>
<td>DeviceConfigurationHistoryList</td>
<td>retrieve configuration history for the identified device.</td>
</tr>
</tbody>
</table>
5.2 Data Types
5.2.1 XML Namespaces

The namespace for the Device Capabilities data types is:

`urn:oma:xml:rest:netapi:devicecapabilities:1`

The 'xsd' namespace is used in the present document to refer to the XML Schema data types defined in XML Schema [XMLSchema1, XMLSchema2]. The 'common' namespace is used in the present document to refer to the data types defined in [REST_NetAPI_Common]. The use of the names 'xsd' and 'common' is not semantically significant.

The XML schema for the data structures defined in the section below is given in [REST_SUP_DeviceCapabilities]. Applications following the RESTful Network API for Device Capabilities V 1.0 specification SHALL use the namespace `urn:oma:xml:rest:netapi:devicecapabilities:1`.

Note: Server implementations can choose to also support the legacy namespace `urn:oma:xml:rest:devicecapabilities:1` for the Device Capabilities data types, in order to allow backwards-compatibility with [ParlayREST_DeviceCapabilities] applications. Use of this legacy namespace is deprecated and support is foreseen to be withdrawn in future versions of this specification. In messages sent from the server to the application, the legacy namespace is suggested to be used by the server if it was used by a legacy application in the corresponding request or subscription message.

5.2.2 Structures

The subsections of this section define the data structures used in the RESTful Device Capabilities API.

Some of the structures can be instantiated as so-called root elements.

For structures that contain elements which describe an equipment identifier, the statements in section 6 regarding 'tel', 'sip' and 'acr' URI schemes apply.

5.2.2.1 Type: DeviceCapabilities

Device Capabilities for queries

<table>
<thead>
<tr>
<th>Element</th>
<th>Type</th>
<th>Optional</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>deviceId</td>
<td>xsd:string</td>
<td>No</td>
<td>A unique equipment identifier for the device (e.g. IMEI)</td>
</tr>
<tr>
<td>name</td>
<td>xsd:string</td>
<td>No</td>
<td>The name of the device/model</td>
</tr>
<tr>
<td>resourceURL</td>
<td>xsd:anyURI</td>
<td>No</td>
<td>Self referring URL</td>
</tr>
<tr>
<td>link</td>
<td>common:Link[0..unbounded]</td>
<td>Yes</td>
<td>Provided by the server, points to other resources that are in relationship with the current resource (e.g. rel=&quot;UserAgentProfileReference&quot; (section 5.2.4)).</td>
</tr>
</tbody>
</table>

A root element named deviceCapabilities of type DeviceCapabilities is allowed in response bodies.

5.2.2.2 Type: DeviceCapabilitiesNotification

Device capabilities for capabilities changes notification
<table>
<thead>
<tr>
<th>Element</th>
<th>Type</th>
<th>Optional</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>callbackData</td>
<td>xsd:string</td>
<td>Yes</td>
<td>The ‘callbackData’ element if it was passed by the application in the ‘callbackReference’ element when creating the subscription for notifications about device capabilities changes. See [REST_NetAPI_Common] for details.</td>
</tr>
<tr>
<td>changeNotificationEnd</td>
<td>xsd:boolean</td>
<td>Yes</td>
<td>Default: false. Set to true if it is a final notification about status change.</td>
</tr>
<tr>
<td>deviceAddress</td>
<td>xsd:anyURI</td>
<td>Yes</td>
<td>Address of a device (e.g. ‘sip’ URI, ‘tel’ URI, ‘acr’ URI) if the notification refers to an individual device. Not present if the notification applies to the entire subscription.</td>
</tr>
<tr>
<td>deviceId</td>
<td>xsd:string</td>
<td>No</td>
<td>A unique equipment identifier for the device (e.g. IMEI)</td>
</tr>
<tr>
<td>link</td>
<td>common:Link[0..unbounded]</td>
<td>Yes</td>
<td>Provided by the server, points to other resources that are in relationship with the current resource (e.g. rel=&quot;DeviceCapabilitiesChangeSubscription&quot;, rel=&quot;DeviceConfiguration&quot; (section 5.2.4)).</td>
</tr>
</tbody>
</table>

A root element named deviceCapabilitiesNotification of type DeviceCapabilitiesNotification is allowed in request and/or response bodies.

### 5.2.2.3 Type: DeviceCapabilitiesCancellationNotification

Cancellation for device capabilities notification

<table>
<thead>
<tr>
<th>Element</th>
<th>Type</th>
<th>Optional</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>callbackData</td>
<td>xsd:string</td>
<td>Yes</td>
<td>The ‘callbackData’ element if it was passed by the application in the ‘callbackReference’ element when creating the subscription for notifications about device capabilities changes. See [REST_NetAPI_Common] for details.</td>
</tr>
<tr>
<td>deviceAddress</td>
<td>xsd:anyURI</td>
<td>Yes</td>
<td>Address of a device (e.g. ‘sip’ URI, ‘tel’ URI, ‘acr’ URI) if the notification refers to an individual device. Not present if the notification applies to the entire subscription.</td>
</tr>
<tr>
<td>reason</td>
<td>common:ServiceError</td>
<td>No</td>
<td>Reason for the notification being discontinued</td>
</tr>
<tr>
<td>link</td>
<td>common:Link[0..unbounded]</td>
<td>Yes</td>
<td>Provided by the server, points to other resources that are in relationship with the current resource (e.g. rel=&quot;DeviceCapabilitiesChangeSubscription&quot;, rel=&quot;DeviceConfiguration&quot; (section 5.2.4)).</td>
</tr>
</tbody>
</table>

A root element named deviceCapabilitiesCancellationNotification of type DeviceCapabilitiesCancellationNotification is allowed in request and/or response bodies.

### 5.2.2.4 Type: ConfigurationHistoryEntry

Device configuration history for query
<table>
<thead>
<tr>
<th>Element</th>
<th>Type</th>
<th>Optional</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>deviceConfiguration</td>
<td>DeviceConfiguration</td>
<td>No</td>
<td>A device configuration</td>
</tr>
<tr>
<td>timestamp</td>
<td>xsd:dateTime</td>
<td>No</td>
<td>The date/time when the configuration was sent to the device address.</td>
</tr>
<tr>
<td>link</td>
<td>common:Link[0..unbounded]</td>
<td>Yes</td>
<td>Provided by the server, points to other resources that are in relationship with the current resource.</td>
</tr>
</tbody>
</table>

### 5.2.2.5 Type: DeviceConfigurationHistoryList

Device configurations history list for query

<table>
<thead>
<tr>
<th>Element</th>
<th>Type</th>
<th>Optional</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>configurationHistoryEntry</td>
<td>ConfigurationHistoryEntry[0..unbounded]</td>
<td>Yes</td>
<td>A list of configuration history elements</td>
</tr>
<tr>
<td>resourceURL</td>
<td>xsd:anyURI</td>
<td>No</td>
<td>Self referring URL</td>
</tr>
</tbody>
</table>

A root element named deviceConfigurationHistoryList of type DeviceConfigurationHistoryList is allowed in response bodies.

### 5.2.2.6 Type: DeviceConfiguration

Device configuration for query or pushing

<table>
<thead>
<tr>
<th>Element</th>
<th>Type</th>
<th>Optional</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>configurationId</td>
<td>xsd:string</td>
<td>No</td>
<td>A unique identifier for the configuration, defined by the server</td>
</tr>
<tr>
<td>name</td>
<td>xsd:string</td>
<td>No</td>
<td>The name of the configuration</td>
</tr>
<tr>
<td>description</td>
<td>xsd:string</td>
<td>No</td>
<td>The description of the configuration</td>
</tr>
<tr>
<td>link</td>
<td>common:Link[0..unbounded]</td>
<td>Yes</td>
<td>Provided by the server, points to other resources that are in relationship with the current resource (e.g. rel=&quot;ConfigurationProfileReference&quot; (section 5.2.4)). A link to a “ConfigurationProfileReference” MUST be provided by the server, in a response to a GET request for available configurations from the application. In this release, there is no support for an application to provide to the server a link to a “ConfigurationProfileReference”, in a POST request to push a device configuration.</td>
</tr>
</tbody>
</table>

A root element named deviceConfiguration of type DeviceConfiguration is allowed in request and/or response bodies.

### 5.2.2.7 Type: DeviceConfigurationList

Available device configurations list for query
### 5.2.2.8 Type: DeviceCapabilitiesChangeSubscriptionList

List of subscriptions to change notifications

<table>
<thead>
<tr>
<th>Element</th>
<th>Type</th>
<th>Optional</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>deviceCapabilitiesChangeSubscription</td>
<td>DeviceCapabilitiesChangeSubscription [0..unbounded]</td>
<td>Yes</td>
<td>A list of available device capabilities change subscriptions</td>
</tr>
<tr>
<td>resourceURL</td>
<td>xsd:anyURI</td>
<td>No</td>
<td>Self referring URL</td>
</tr>
</tbody>
</table>

A root element named deviceCapabilitiesChangeSubscriptionList of type DeviceCapabilitiesChangeSubscriptionList is allowed in response bodies.

### 5.2.2.9 Type: DeviceCapabilitiesChangeSubscription

Subscription to change notifications
<table>
<thead>
<tr>
<th>Element</th>
<th>Type</th>
<th>Optional</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>timeCreated</td>
<td>xsd:dateTime</td>
<td>No</td>
<td>The date/time when the subscription was created</td>
</tr>
<tr>
<td>callbackReference</td>
<td>common:CallbackReference</td>
<td>No</td>
<td>Client's notification URL and OPTIONAL callbackData</td>
</tr>
<tr>
<td>clientCorrelator</td>
<td>xsd:string</td>
<td>Yes</td>
<td>A correlator that the client can use to tag this particular resource representation during a request to create a resource on the server.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>This field MAY be present. Note: this allows the client to recover from communication failures during resource creation and therefore avoids duplicate subscription creation in such situations.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>In case the field is present, the server SHALL not alter its value, and SHALL provide it as part of the representation of this resource. In case the field is not present, the server SHALL NOT generate it.</td>
</tr>
<tr>
<td>resourceURL</td>
<td>xsd:anyURI</td>
<td>Yes</td>
<td>Self referring URL. The resourceURL SHALL NOT be included in POST requests by the client, but MUST be included in POST requests representing notifications by the server to the client, when a complete representation of the resource is embedded in the notification. The resourceURL MUST also be included in responses to any HTTP method that returns an entity body, and in PUT requests.</td>
</tr>
<tr>
<td>link</td>
<td>common:Link[0..unbounded]</td>
<td>Yes</td>
<td>Provided by the server, points to other resources that are in relationship with the current resource (e.g. rel=&quot;DeviceConfiguration&quot; (section 5.2.4)).</td>
</tr>
</tbody>
</table>

A root element named deviceCapabilitiesChangeSubscription of type DeviceCapabilitiesChangeSubscription is allowed in request and/or response bodies.

Note that the clientCorrelator is used for purposes of error recovery as specified in [REST_NetAPI_Common], and internal client purposes. The server is NOT REQUIRED to use the clientCorrelator value in any form in the creation of the URL of the resource. The document [REST_NetAPI_Common] provides a recommendation regarding the generation of the value of this field.

5.2.3 Enumerations

This section is empty in this version of the specification.

5.2.4 Values of the Link “rel” attribute

The “rel” attribute of the Link element is a free string set by the server implementation, to indicate a relationship between the current resource and an external resource. The following are possible strings (list is non-exhaustive, and can be extended):
• ConfigurationProfileReference
• DeviceCapabilitiesChangeSubscription
• DeviceCapabilities
• DeviceConfiguration
• UserAgentProfileReference

These values indicate the kind of resource that the link points to. The value “UserAgentProfileReference” indicates that the accompanying Link href attribute refers to a document containing a device’s User Agent Profile (e.g. http://.../deviceprofiles/N6230ir200.xml). The value “ConfigurationProfileReference” indicates that the accompanying Link href attribute refers to a document containing a device’s configuration profile (e.g. http://.../deviceconfig/12345.xml”).

5.3 Sequence Diagrams

The following sub-sections describe the resources, methods and steps involved in typical scenarios.

In a sequence diagram, a step which involves delivering a notification is labeled with “POST or NOTIFY”, where “POST” refers to delivery via the HTTP POST method, and “NOTIFY” refers to delivery using the Notification Channel [REST_NetAPI_NotificationChannel].

5.3.1 Retrieving device capabilities information

This figure below shows a scenario for retrieving device capabilities information.

The resource:
- To retrieve device capabilities for a single device, read the resource below with equipmentId identifying the targeted device

http://{serverRoot}/devicecapabilities/{apiVersion}/{equipmentId}/capabilities

Outline of flow:

1. An application requests the device capabilities for a device identified by equipmentId (e.g. device address) using GET and receives the device’s capabilities information (including deviceId, model name, link to capabilities - e.g. UAProfile)
### 5.3.2 Subscribing for and notifying on device(s) capabilities

This figure below shows a scenario to create and use a subscription for device capabilities changes notifications.

The notification URL passed by the client during the subscription step can be a Client-side Notification URL, or a Server-side Notification URL. Refer to [REST_NetAPI_NotificationChannel] for sequence flows illustrating the creation of a Notification Channel and obtaining a Server-side Notification URL on the server-side, and the use of that Notification Channel by the client.

The resources:

- To start subscription to notifications about changes to device capabilities for identified device(s), create new resource under

  \[serverRoot\]/devicecapabilities/{apiVersion}/{equipmentId}/subscriptions

- To delete an individual subscription, use the resource

  \[serverRoot\]/devicecapabilities/{apiVersion}/{equipmentId}/subscriptions/{subscriptionId}

![Diagram](image)

**Figure 3 Subscribing for change notifications and handling notifications**

1. An application creates a new notification subscription for changes in the device capabilities of the device(s) identified by {equipmentId} by using POST and receives the resulting resource URL containing the subscriptionId.

2. When the device capabilities for the identified device(s) change the server notifies the application using POST to the application supplied notifyURL. Alternatively, the application obtains the notifications using a Notification Channel [REST_NetAPI_NotificationChannel].

3. An application deletes a subscription for changes in the device capabilities of the identified device(s) and stops notifications for the application by using DELETE to resource URL containing the subscriptionId.
5.3.3 Pushing a configuration to device(s)

This figure below shows a scenario for pushing a configuration to an identified device or group of devices.

The resource:

- To push a configuration to identified device(s), POST the configuration to the resource below with equipmentId identifying the targeted device(s)

  \[ \text{http://[serverRoot]/devicecapabilities/[apiVersion]/[equipmentId]/configuration} \]

Outline of flow:

1. An application requests that a new configuration is pushed to device(s) identified by equipmentId using POST.

5.3.4 Retrieving available configurations and history of configurations

This figure below shows a scenario to retrieve available configurations or history of configurations for device(s) identified by {equipmentId}.

The resources:

- To retrieve available configurations for an identified device, read the resource below with equipmentId identifying the targeted device

  \[ \text{http://[serverRoot]/devicecapabilities/[apiVersion]/[equipmentId]/configuration/available} \]

- To retrieve configuration history for an identified device, read the resource below with equipmentId identifying the targeted device

  \[ \text{http://[serverRoot]/devicecapabilities/[apiVersion]/[equipmentId]/configuration/history} \]
1. An application requests/receives available configurations or configurations history for a device identified by `equipmentId` using GET.
6. Detailed specification of the resources

The following applies to all resources defined in this specification regardless of the representation format (i.e. XML, JSON, application/x-www-form-urlencoded):

- **Reserved characters in URL variables** (parts of a URL denoted below by a name in curly brackets) MUST be percent-encoded according to [RFC3986]. Note that this always applies, no matter whether the URL is used as a Request URL or inside the representation of a resource (such as in “resourceURL” and “link” elements).

- If an equipment identifier of type anyURI is in the form of an MSISDN, it MUST be defined as a global number according to [RFC3966] (e.g. tel:+19585550100). The use of characters other than digits and the leading “+” sign SHOULD be avoided in order to ensure uniqueness of the resource URL. This applies regardless of whether the user identifier appears in a URL variable or in a parameter in the body of an HTTP message.

- If an equipment identifier of type anyURI is in the form of a SIP URI, it MUST be defined according to [RFC3261].

- If an equipment identifier of type anyURI is in the form of an Anonymous Customer Reference (ACR), it MUST be defined according to [IETF_ACR_draft], i.e. it MUST include the protocol prefix ‘acr:’ followed by the ACR.
  - The ACR ‘auth’ is a supported reserved keyword, and MUST NOT be assigned as an ACR to any particular end user. See G.1.2 for details regarding the use of this reserved keyword.

- For requests and responses that have a body, the following applies: in the requests received, the server SHALL support JSON and XML encoding of the parameters in the body, and MAY support application/x-www-form-urlencoded parameters in the body. The Server SHALL return either JSON or XML encoded parameters in the response body, according to the result of the content type negotiation as specified in [REST_NetAPI_Common]. In notifications to the Client, the server SHALL use either XML or JSON encoding, depending on which format the client has specified in the related subscription. The generation and handling of the JSON representations SHALL follow the rules for JSON encoding in HTTP Requests/Responses as specified in [REST_NetAPI_Common].

6.1 Resource: Device capabilities

The resource used is: **http://{serverRoot}/devicecapabilities/{apiVersion}/{equipmentId}/capabilities**

The resource is intended to retrieve the capabilities of an identified device. The device is identified by its equipmentId. In the current release, reading configuration for group of devices is not supported. If a group URI is provided, a service provider policy will determine whether the request can or cannot be supported. In case the request cannot be supported, a fault (POL0006) will be returned to the application.

The information returned is the device capabilities consisting of a unique ID for the device type, the name/model of the device and a link to the User Agent Profile XML file for the device.

6.1.1 Request URL variables

The following request URL variables are common for all HTTP commands:

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>serverRoot</td>
<td>Server base url: hostname+port+base path. Port and base path are OPTIONAL. Example: example.com/exampleAPI</td>
</tr>
<tr>
<td>apiVersion</td>
<td>Version of the API client wants to use. The value of this variable is defined in section 5.1.</td>
</tr>
<tr>
<td>equipmentId</td>
<td>Equipment identifier. Examples: tel:+19585550100, acr:pseudonym123</td>
</tr>
</tbody>
</table>

See section 6 for a statement on the escaping of reserved characters in URL variables.

6.1.2 Response Codes and Error Handling

For HTTP response codes, see [REST_NetAPI_Common].

For Policy Exception and Service Exception fault codes applicable to Device Capabilities, see section 7.
6.1.3 GET

This operation is used to retrieve capabilities of the identified device.

6.1.3.1 Example: Retrieve device capabilities (Informative)

6.1.3.1.1 Request

GET /exampleAPI/devicecapabilities/v1/tel%3A%2B19585550100/capabilities HTTP/1.1
Accept: application/xml
Host: example.com

6.1.3.1.2 Response

HTTP/1.1 200 OK
Date: Thu, 04 Jun 2010 02:52:00 GMT
Content-Type: application/xml
Content-Length: nnnn

<?xml version="1.0" encoding="UTF-8"?>
<dc:deviceCapabilities xmlns:dc="urn:oma:xml:rest:netapi:devicecapabilities:1">
  <deviceId>123456789012345</deviceId>
  <name>devname123</name>
  <resourceURL>http://example.com/exampleAPI/devicecapabilities/v1/tel%3A%2B19585550100/capabilities</resourceURL>
  <link rel="UserAgentProfileReference" href="http://example.com/exampleconfigurations/exampledeviceprofiles/A1234xyz123.xml"/>
</dc:deviceCapabilities>

6.1.4 PUT

Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: GET’ field in the response as per section 14.7 of [RFC 2616].

6.1.5 POST

Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: GET’ field in the response as per section 14.7 of [RFC 2616].

6.1.6 DELETE

Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: GET’ field in the response as per section 14.7 of [RFC 2616].

6.2 Resource: Subscriptions for device capabilities changes notifications

The resource used is: http://{serverRoot}/devicecapabilities/{apiVersion}/{equipmentId}/subscriptions

The application sets a notification trigger for changes in the equipment identified (device or group of devices). In case a single device is targeted the application passes deviceAddress (e.g. the device URI) for the equipmentId. In case a group of devices is targeted the application passes a deviceGroupId (e.g. a group URI).

This resource can be used in conjunction with a Client-side Notification URL, or in conjunction with a Server-side Notification URL. In this latter case, the application MUST first create a Notification Channel (see [REST_NetAPI_NotificationChannel]) before creating a subscription.
Note: in this release, a single subscription per client is supported. The reason for the resource structure is to provide for consistency with other APIs supporting subscriptions, and allow extensions in future releases for multiple subscriptions per client.

6.2.1 Request URL variables

The following request URL variables are common for all HTTP commands:

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>serverRoot</td>
<td>Server base url: hostname+port+base path. Port and base path are OPTIONAL.</td>
</tr>
<tr>
<td>apiVersion</td>
<td>Version of the API client wants to use. The value of this variable is defined</td>
</tr>
<tr>
<td></td>
<td>in section 5.1.</td>
</tr>
<tr>
<td>equipmentId</td>
<td>Equipment identifier. Examples: tel:+19585550100, acr:pseudonym123</td>
</tr>
</tbody>
</table>

See section 6 for a statement on the escaping of reserved characters in URL variables.

6.2.2 Response Codes and Error Handling

For HTTP response codes, see [REST_NetAPI_Common].

For Policy Exception and Service Exception fault codes applicable to Device Capabilities, see section 7.

6.2.3 GET

This operation is used to retrieve the list of device capabilities changes subscriptions to notifications for the identified device(s).

In this release, a single subscription per application is supported.

6.2.3.1 Example: Retrieve list of subscriptions (Informative)

This example shows also an alternative way to indicate desired content type in response from the server, by using URL query parameter “?resFormat” which is described in [REST_NetAPI_Common].

6.2.3.1.1 Request

```
GET /exampleAPI/devicecapabilities/v1/tel%3A%2B19585550100/subscriptions?resFormat=XML HTTP/1.1
Accept: application/xml
Host: example.com
```

6.2.3.1.2 Response

```
HTTP/1.1 200 OK
Date: Thu, 04 Jun 2010 02:52:00 GMT
Content-Type: application/xml
Content-Length: nnnn

<?xml version="1.0" encoding="UTF-8"?>
<dc:deviceCapabilitiesChangeSubscriptionList xmlns:dc="urn:oma:xml:rest:netapi:devicecapabilities:1">
  <deviceCapabilitiesChangeSubscription>
    <timeCreated>2010-03-21T13:23:21Z</timeCreated>
    <callbackReference>
      <notifyURL>http://application.example.com/notifications/CapabilitiesChangeNotification</notifyURL>
    </callbackReference>
  </deviceCapabilitiesChangeSubscription>
</dc:deviceCapabilitiesChangeSubscriptionList>
```
6.2.4 PUT

Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: GET, POST’ field in the response as per section 14.7 of [RFC 2616].

6.2.5 POST

This operation is used to create a new device capabilities changes subscription to notifications for the identified device(s).

The notifyURL in the callbackReference either contains the Client-side Notification URL (as defined by the client) or the Server-side Notification URL (as obtained during the creation of the Notification Channel[REST_NetAPI_NotificationChannel]).

6.2.5.1 Example 1: Subscribe to device capabilities changes notifications for single device using ‘tel’ URI (Informative)

This example also illustrates how to indicate the desired notification format.

6.2.5.1.1 Request

POST /exampleAPI/devicecapabilities/v1/tel%3A%2B19585550100/subscriptions HTTP/1.1
Accept: application/xml
Host: example.com
Content-Type: application/xml
Content-Length: nnnn

<?xml version="1.0" encoding="UTF-8"?>
<dc:deviceCapabilitiesChangeSubscription xmlns:dc="urn:oma:xml:rest:netapi:devicecapabilities:1">
  <timeCreated>2010-03-21T13:23:21Z</timeCreated>
  <callbackReference>
    <notifyURL>http://application.example.com/notifications/CapabilitiesChangeNotification</notifyURL>
    <callbackData>12345</callbackData>
    <notificationFormat>JSON</notificationFormat>
  </callbackReference>
  <clientCorrelator>54321</clientCorrelator>
</dc:deviceCapabilitiesChangeSubscription>

6.2.5.1.2 Response

HTTP/1.1 201 Created
Date: Thu, 04 Jun 2010 02:52:00 GMT
6.2.5.2 Example 2: Subscribe to device capabilities changes notifications for single device using ‘acr’ URI (Informative)

This example also illustrates how to indicate the desired notification format.

6.2.5.2.1 Request

POST /exampleAPI/devicecapabilities/v1/acr%3Apseudonym123/subscriptions HTTP/1.1
Accept: application/xml
Host: example.com
Content-Type: application/xml
Content-Length: nnnn

<?xml version="1.0" encoding="UTF-8"?>
<dc:deviceCapabilitiesChangeSubscription xmlns:dc="urn:oma:xml:rest:netapi:devicecapabilities:1">
  <timeCreated>2010-03-21T13:23:21Z</timeCreated>
  <callbackReference>
    <notifyURL>http://application.example.com/notifications/CapabilitiesChangeNotification</notifyURL>
    <callbackData>12345</callbackData>
    <notificationFormat>JSON</notificationFormat>
  </callbackReference>
  <clientCorrelator>54321</clientCorrelator>
</dc:deviceCapabilitiesChangeSubscription>

6.2.5.2.2 Response

HTTP/1.1 201 Created
Date: Thu, 04 Jun 2010 02:52:00 GMT
Location: http://example.com/exampleAPI/devicecapabilities/v1/acr%3Apseudonym123/subscriptions/sub123

6.2.5.4.2 Response

HTTP/1.1 201 Created
Date: Thu, 04 Jun 2010 02:52:00 GMT
Location: http://example.com/exampleAPI/devicecapabilities/v1/tel%3A%2B19585550100/subscriptions/sub123
Content-Type: application/xml
Content-Length: nnnn

<?xml version="1.0" encoding="UTF-8"?>
<common:resourceReference xmlns:common="urn:oma:xml:rest:netapi:common:1">
  <resourceURL>http://example.com/exampleAPI/devicecapabilities/v1/tel%3A%2B19585550100/subscriptions/sub123</resourceURL>
</common:resourceReference>

6.2.6 DELETE

Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: GET, POST’ field in the response as per section 14.7 of [RFC 2616].
6.3 Resource: Individual subscription for device capabilities changes notifications

The resource used is: http://{serverRoot}/devicecapabilities/{apiVersion}/{equipmentId}/subscriptions/{subscriptionId}

The application can retrieve or delete a notification trigger for changes in the equipment identified (device or group of devices). In case a single device is targeted the application passes deviceAddress (e.g. the device URI) for the equipmentId. In case a group of devices is targeted the application passes a deviceGroupId (e.g. a group URI).

In this release, a single subscription per application is supported. The reason for the resource structure supporting a list of subscriptions is to provide consistency with other APIs supporting subscriptions, and allow extensions in future releases for multiple subscriptions per application.

6.3.1 Request URL variables

The following request URL variables are common for all HTTP commands:

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>serverRoot</td>
<td>Server base url: hostname+port+base path. Port and base path are OPTIONAL. Example: example.com/exampleAPI</td>
</tr>
<tr>
<td>apiVersion</td>
<td>Version of the API client wants to use. The value of this variable is defined in section 5.1.</td>
</tr>
<tr>
<td>equipmentId</td>
<td>Equipment identifier. Examples: tel:+19585550100, acr:pseudonym123</td>
</tr>
<tr>
<td>subscriptionId</td>
<td>Subscription identifier</td>
</tr>
</tbody>
</table>

See section 6 for a statement on the escaping of reserved characters in URL variables.

6.3.2 Response Codes and Error Handling

For HTTP response codes, see [REST_NetAPI_Common].

For Policy Exception and Service Exception fault codes applicable to Device Capabilities, see section 7.

6.3.3 GET

This operation is used to retrieve an individual device capabilities changes subscription to notifications for a given device or group of devices.

6.3.3.1 Example: Retrieve subscription (Informative)

6.3.3.1.1 Request

GET /exampleAPI/devicecapabilities/v1/tel%3A%2B19585550100/subscriptions/sub123 HTTP/1.1
Accept: application/xml
Host: example.com

6.3.3.1.2 Response

HTTP/1.1 200 OK
Date: Thu, 04 Jun 2010 02:52:00 GMT
Content-Type: application/xml
Content-Length: nnnn

<?xml version="1.0" encoding="UTF-8"?>
6.3.4 PUT

Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: GET, DELETE’ field in the response as per section 14.7 of [RFC 2616].

6.3.5 POST

Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: GET, DELETE’ field in the response as per section 14.7 of [RFC 2616].

6.3.6 DELETE

This operation is used to delete an individual device capabilities changes subscription to notifications for a given device or group of devices.

6.3.6.1 Example: Delete subscription (Informative)

6.3.6.1.1 Request

DELETE /exampleAPI/devicecapabilities/v1/tel%3A%2B19585550100/subscriptions/sub123 HTTP/1.1
Accept: application/xml
Host: example.com

6.3.6.1.2 Response

HTTP/1.1 204 No Content
Date: Thu, 04 Jun 2010 02:52:00 GMT

6.4 Resource: Notification on device capabilities changes

This resource is a callback URL provided by the client for notification about device capabilities changes. The RESTful Device Capabilities API does not make any assumption about the structure of this URL. If this URL is a Client-side Notification URL, the server will POST notifications directly to it. If this URL is a Server-side Notification URL, the server uses it to determine the address of the Notification Server to which the notifications will subsequently be POSTed. The way the server determines the address of the Notification Server is out of scope of this specification.

Note: In the case when the client has set up a Notification Channel to obtain the notifications, the client needs to use the mechanisms described in [REST_NetAPI_NotificationChannel], instead of the mechanism described below in section 6.4.5.

6.4.1 Request URL variables

Client provided.
6.4.2 Response Codes and Error Handling
For HTTP response codes, see [REST_NetAPI_Common].
For Policy Exception and Service Exception fault codes applicable to Device Capabilities, see section 7.

6.4.3 GET
Method not allowed by the resource. The returned HTTP error status is 405. The client should also include the ‘Allow: POST’ field in the response as per section 14.7 of [RFC 2616].

6.4.4 PUT
Method not allowed by the resource. The returned HTTP error status is 405. The client should also include the ‘Allow: POST’ field in the response as per section 14.7 of [RFC 2616].

6.4.5 POST
This operation is used by the server to send notifications to the application. There are three types of notifications:
1) normal change – a new deviceId is delivered as part of the structure
2) end of notifications - the notifications have ended for this subscription. This message will be delivered when the duration for notifications has been completed. This message will not be delivered in the case of an error ending the notifications or deliberate ending of the notification by client.
3) error – indicates cancelling the notifications with a reason for cancellation

6.4.5.1 Example 1: Device capabilities changes notification (Informative)

6.4.5.1.1 Request

```
POST /notifications/CapabilitiesChangeNotification HTTP/1.1
Accept: application/xml
Host: application.example.com
Content-Type: application/xml
Content-Length: nnnn

<?xml version="1.0" encoding="UTF-8"?>
<dc:deviceCapabilitiesNotification xmlns:dc="urn:oma:xml:rest:netapi:devicecapabilities:1">
  <callbackData>12345</callbackData>
  <changeNotificationEnd>false</changeNotificationEnd>
  <deviceAddress>tel:+19585550100</deviceAddress>
  <deviceId>123456789012345</deviceId>
  <link rel="DeviceCapabilitiesChangeSubscription" href="http://example.com/exampleAPI/devicecapabilities/v1/tel%3A%2B19585550100/subscriptions/sub123"/>
  <link rel="DeviceCapabilities" href="http://example.com/exampleAPI/devicecapabilities/v1/tel%3A%2B19585550100/capabilities"/>
  <link rel="DeviceConfiguration" href="http://example.com/exampleAPI/devicecapabilities/v1/tel%3A%2B19585550100/configuration"/>
</dc:deviceCapabilitiesNotification>
```

6.4.5.1.2 Response

```
HTTP/1.1 204 No Content
```
6.4.5.2  Example 2: End of changes notification

6.4.5.2.1  Request

POST /notifications/CapabilitiesChangeNotification HTTP/1.1
Accept : application/xml
Host: application.example.com
Content-Type: application/xml
Content-Length: nnnn

<?xml version="1.0" encoding="UTF-8"?>
<dc:deviceCapabilitiesNotification xmlns:dc="urn:oma:xml:rest:netapi:devicecapabilities:1">
  <callbackData>12345</callbackData>
  <changeNotificationEnd>true</changeNotificationEnd>
  <deviceAddress>tel:+19585550100</deviceAddress>
  <deviceId>123456789012345</deviceId>

  <link rel="DeviceCapabilitiesChangeSubscription" href="http://example.com/exampleAPI/devicecapabilities/v1/tel%3A%2B19585550100/subscriptions/sub123"/>
  <link rel="DeviceCapabilities" href="http://example.com/exampleAPI/devicecapabilities/v1/tel%3A%2B19585550100/capabilities"/>
  <link rel="DeviceConfiguration" href="http://example.com/exampleAPI/devicecapabilities/v1/tel%3A%2B19585550100/configuration"/>
</dc:deviceCapabilitiesNotification>

6.4.5.2.2  Response

HTTP/1.1 204 No Content
Date: Thu, 04 Jun 2010 02:52:00 GMT

6.4.5.3  Example 3: Error notification (notification cancellation)  (Informative)

6.4.5.3.1  Request

POST /notifications/StatusNotification HTTP/1.1
Accept : application/xml
Host: application.example.com
Content-Type: application/xml
Content-Length: nnnn

<?xml version="1.0" encoding="UTF-8"?>
<dc:deviceCapabilitiesCancellationNotification xmlns:dc="urn:oma:xml:rest:netapi:devicecapabilities:1">
  <callbackData>12345</callbackData>
</dc:deviceCapabilitiesCancellationNotification>
6.4.5.3.2 Response

HTTP/1.1 204 No Content
Date: Thu, 04 Jun 2010 02:52:00 GMT

6.4.6 DELETE

Method not allowed by the resource. The returned HTTP error status is 405. The client should also include the ‘Allow: POST’ field in the response as per section 14.7 of [RFC 2616].

6.5 Resource: Device configuration

The resource used is: http://{serverRoot}/devicecapabilities/{apiVersion}/{equipmentId}/configuration

The resource supports pushing a configuration to a device or a group of devices.

6.5.1 Request URL variables

The following request URL variables are common for all HTTP commands:

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>serverRoot</td>
<td>Server base url: hostname+port+base path. Port and base path are OPTIONAL. Example: example.com/exampleAPI</td>
</tr>
<tr>
<td>apiVersion</td>
<td>Version of the API client wants to use. The value of this variable is defined in section 5.1.</td>
</tr>
<tr>
<td>equipmentId</td>
<td>Equipment identifier. Examples: tel:+19585550100, acr:pseudonym123</td>
</tr>
</tbody>
</table>

See section 6 for a statement on the escaping of reserved characters in URL variables.

6.5.2 Response Codes and Error Handling

For HTTP response codes, see [REST_NetAPI_Common].

For Policy Exception and Service Exception fault codes applicable to Device Capabilities, see section 7.
6.5.3 GET
Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: POST’ field in the response as per section 14.7 of [RFC 2616].

6.5.4 PUT
Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: POST’ field in the response as per section 14.7 of [RFC 2616].

6.5.5 POST
This operation is used to push a configuration to a device or a group of devices. This operation results in a one-time push of a device configuration, and the resource is no longer accessible by the application for other operations.

6.5.5.1 Example 1: Push configuration to single device (Informative)

6.5.5.1.1 Request
POST /exampleAPI/devicecapabilities/v1/tel%3A%2B19585550100/configuration HTTP/1.1
Accept: application/xml
Host: example.com
Content-Type: application/xml
Content-Length: nnnn

<?xml version="1.0" encoding="UTF-8"?>
<dc:deviceConfiguration xmlns:dc="urn:oma:xml:rest:netapi:devicecapabilities:1">
  <configurationId>config12345</configurationId>
  <name>configname12345</name>
  <description>configdescription12345</description>
</dc:deviceConfiguration>

6.5.5.1.2 Response
HTTP/1.1 204 No Content
Date: Thu, 04 Jun 2010 02:52:00 GMT

6.5.5.2 Example 2: Push configuration to group of devices (Informative)

6.5.5.2.1 Request
POST /exampleAPI/devicecapabilities/v1/GRP19585550100/configuration HTTP/1.1
Accept: application/xml
Host: example.com
Content-Type: application/xml
Content-Length: nnnn

<?xml version="1.0" encoding="UTF-8"?>
<dc:deviceConfiguration xmlns:dc="urn:oma:xml:rest:netapi:devicecapabilities:1">
  <configurationId>config12345</configurationId>
  <name>configname12345</name>
  <description>configdescription12345</description>
</dc:deviceConfiguration>
6.5.5.2.2 Response

HTTP/1.1 204 No Content
Date: Thu, 04 Jun 2010 02:52:00 GMT

6.5.6 DELETE
Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: POST’ field in the response as per section 14.7 of [RFC 2616].

6.6 Resource: Available configurations
The resource used is: http://{serverRoot}/devicecapabilities/{apiVersion}/{equipmentId}/configuration/available
The resource is used to retrieve configurations available for an identified device. In the current release, reading configurations available for a group of devices is not supported. If a group URI is provided, a service provider policy will determine whether the request can or cannot be supported. In case the request cannot be supported, a fault (POL0006) will be returned to the application.

The configurations have to be made available in advance by the gateway operator.

6.6.1 Request URL variables
The following request URL variables are common for all HTTP commands:

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>serverRoot</td>
<td>Server base url: hostname+port+base path. Port and base path are OPTIONAL. Example: example.com/exampleAPI</td>
</tr>
<tr>
<td>apiVersion</td>
<td>Version of the API client wants to use. The value of this variable is defined in section 5.1.</td>
</tr>
<tr>
<td>equipmentId</td>
<td>Equipment identifier. Examples: tel:+19585550100, acr:pseudonym123</td>
</tr>
</tbody>
</table>

See section 6 for a statement on the escaping of reserved characters in URL variables.

6.6.2 Response Codes and Error Handling
For HTTP response codes, see [REST_NetAPI_Common].
For Policy Exception and Service Exception fault codes applicable to Device Capabilities, see section 7.

6.6.3 GET
This operation is used to retrieve available configurations for the identified device.

6.6.3.1 Example: Retrieve available device configurations (Informative)

6.6.3.1.1 Request

GET /exampleAPI/devicecapabilities/v1/tel%3A%2B19585550100/configuration/available HTTP/1.1
Accept: application/xml
Host: example.com
6.6.3.1.2 Response

HTTP/1.1 200 OK  
Date: Thu, 04 Jun 2010 02:52:00 GMT  
Content-Type: application/xml  
Content-Length: nnnn

<?xml version="1.0" encoding="UTF-8"?>
<dc:deviceConfigurationList xmlns:dc="urn:oma:xml:rest:netapi:devicecapabilities:1">
  <deviceConfiguration>
    <configurationId>config12345</configurationId>
    <name>configname12345</name>
    <description>configdescription12345</description>
    <link rel="ConfigurationProfileReference" href="http://example.com/exampleconfigurations/exampledeviceconfig/12345.xml"/>
  </deviceConfiguration>
  <deviceConfiguration>
    <configurationId>config12346</configurationId>
    <name>configname12346</name>
    <description>configdescription12346</description>
    <link rel="ConfigurationProfileReference" href="http://example.com/exampleconfigurations/exampledeviceconfig/12346.xml"/>
  </deviceConfiguration>
  <deviceConfiguration>
    <configurationId>config12347</configurationId>
    <name>configname12347</name>
    <description>configdescription12347</description>
    <link rel="ConfigurationProfileReference" href="http://example.com/exampleconfigurations/exampledeviceconfig/12347.xml"/>
  </deviceConfiguration>
  <resourceURL>http://example.com/exampleAPI/devicecapabilities/v1/tel%3A%2B19585550100/configuration/available</resourceURL>
</dc:deviceConfigurationList>

6.6.4 PUT

Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the 'Allow: GET' field in the response as per section 14.7 of [RFC 2616].

6.6.5 POST

Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the 'Allow: GET' field in the response as per section 14.7 of [RFC 2616].

6.6.6 DELETE

Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the 'Allow: GET' field in the response as per section 14.7 of [RFC 2616].

6.7 Resource: Configuration history

The resource used is: http://{serverRoot}/devicecapabilities/{apiVersion}/{equipmentId}/configuration/history

The resource is used to retrieve configurations previously pushed to an identified device. In the current release, reading configurations previously pushed to a group of devices is not supported. If a group URI is provided, a service provider policy
will determine whether the request can or cannot be supported. In case the request cannot be supported, a fault (POL0006)
will be returned to the application.

### 6.7.1 Request URL variables

The following request URL variables are common for all HTTP commands:

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>serverRoot</td>
<td>Server base url: hostname+port+base path. Port and base path are OPTIONAL.</td>
</tr>
<tr>
<td></td>
<td>Example: example.com/exampleAPI</td>
</tr>
<tr>
<td>apiVersion</td>
<td>Version of the API client wants to use. The value of this variable is defined</td>
</tr>
<tr>
<td></td>
<td>in section 5.1.</td>
</tr>
<tr>
<td>equipmentId</td>
<td>Equipment identifier. Examples: tel:+19585550100, acr:pseudonym123</td>
</tr>
</tbody>
</table>

See section 6 for a statement on the escaping of reserved characters in URL variables.

### 6.7.2 Response Codes and Error Handling

For HTTP response codes, see [REST_NetAPI_Common].

For Policy Exception and Service Exception fault codes applicable to Device Capabilities, see section 7.

### 6.7.3 GET

This operation is used to retrieve configuration history for the identified device.

#### 6.7.3.1 Example: Retrieve configuration history (Informative)

**6.7.3.1.1 Request**

```
GET /exampleAPI/devicecapabilities/v1/tel%3A%2B19585550100/configuration/history HTTP/1.1
Accept: application/xml
Host: example.com
```

**6.7.3.1.2 Response**

```
HTTP/1.1 200 OK
Date: Thu, 04 Jun 2010 02:52:00 GMT
Content-Type: application/xml
Content-Length: nnnn

<?xml version="1.0" encoding="UTF-8"?>
<dc:deviceConfigurationHistoryList xmlns:dc="urn:oma:xml:rest:netapi:devicecapabilities:1">
  <configurationHistoryEntry>
    <deviceConfiguration>
      <configurationId>config12345</configurationId>
      <name>configname12345</name>
      <description>configdescription12345</description>
      <link rel="ConfigurationProfileReference" href="http://example.com/exampleconfigurations/exampledeviceconfig/12345.xml"/>
    </deviceConfiguration>
    <timestamp>2009-11-19T12:00:00</timestamp>
  </configurationHistoryEntry>
</dc:deviceConfigurationHistoryList>
```
6.7.4 PUT
Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: GET’ field in the response as per section 14.7 of [RFC 2616].

6.7.5 POST
Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: GET’ field in the response as per section 14.7 of [RFC 2616].

6.7.6 DELETE
Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: GET’ field in the response as per section 14.7 of [RFC 2616].
7. Fault definitions

7.1 Service Exceptions
For common Service Exceptions refer to [REST_NetAPI_Common].
There are no additional Service Exception codes defined for the RESTful Device Capabilities API.

7.2 Policy Exceptions
For common Policy Exceptions refer to [REST_NetAPI_Common].
There are no additional Policy Exception codes defined for the RESTful Device Capabilities API.
## Appendix A. Change History

### (Informative)

Appendix C. Application/x-www-form-urlencoded Request Format for POST Operations (Normative)

This section defines a format for RESTful Device Capabilities API requests where the body of the request is encoded using the application/x-www-form-urlencoded MIME type.

Note: only the request body is encoded as application/x-www-form-urlencoded, the response is still encoded as XML or JSON depending on the preference of the client and the capabilities of the server. Names and values MUST follow the application/x-www-form-urlencoded character escaping rules from [W3C_URLENC].

The encoding is defined below for the following Device Capabilities REST operations which are based on POST requests:

- Create a subscription for device capabilities changes notification
- Push a configuration to a device

C.1 Start device capabilities changes notifications

This operation is used to create a new device capabilities change subscription to notifications for the identified device(s), see section 6.2.5.

This REST operation is used by the application to start the device change notifications. It MUST use the HTTP POST operation. If the operation was successful, it returns an HTTP Status of “201 Created”.

The notifyURL either contains the Client-side Notification URL (as defined by the client) or the Server-side Notification URL (as obtained during the creation of the Notification Channel [REST_NetAPI_NotificationChannel]).

The following parameters are defined:

<table>
<thead>
<tr>
<th>Name</th>
<th>Type/Values</th>
<th>Optional</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>timeCreated</td>
<td>xsd:dateTime</td>
<td>No</td>
<td>The date/time when the subscription was created</td>
</tr>
<tr>
<td>notifyURL</td>
<td>xsd:anyURI</td>
<td>No</td>
<td>Notification endpoint definition. For the use of Client-side Notification URLs and Server-side Notification URLs in this parameter, see sections 6.2 and 6.2.5.</td>
</tr>
<tr>
<td>callbackData</td>
<td>xsd: string</td>
<td>Yes</td>
<td>Data the application can register with the server when subscribing to notifications, and that are passed back unchanged in each of the related notifications</td>
</tr>
<tr>
<td>notificationFormat</td>
<td>xsd: string</td>
<td>Yes</td>
<td>Default: XML. Application can specify format of the resource representation in notifications that are related to this subscription. The choice is between {XML, JSON}.</td>
</tr>
<tr>
<td>clientCorrelator</td>
<td>xsd:string</td>
<td>Yes</td>
<td>A correlator that the client can use to tag this particular resource representation during a request to create a resource on the server. This field MAY be present. Note: this allows the client to recover from communication failures during resource creation and therefore avoids duplicate subscription creation in such situations. In case the field is present, the server SHALL not alter its value, and SHALL provide it as part of the representation of this resource. In case the field is not present, the server SHALL NOT generate it.</td>
</tr>
</tbody>
</table>
C.1.1  Example 1, using ‘tel’ URI
(Informative)

C.1.1.1  Request

POST /exampleAPI/devicecapabilities/v1/tel%3A%2B19585550100/subscriptions HTTP/1.1
Accept: application/xml
Host: example.com
Content-Type: application/x-www-form-urlencoded

C.2 Push a Configuration to a Device

This operation is used to push a configuration to a device/group of devices, see section 6.5.5.

It MUST use the HTTP POST operation. If the operation was successful, it returns an HTTP Status of “201 Created”.

The following parameters are defined:

<table>
<thead>
<tr>
<th>Name</th>
<th>Type/Values</th>
<th>Optional</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>configurationId</td>
<td>xsd:string</td>
<td>No</td>
<td>A unique identifier for the configuration</td>
</tr>
<tr>
<td>name</td>
<td>xsd:string</td>
<td>No</td>
<td>The name of the configuration</td>
</tr>
<tr>

name=configname12345&
description=configdescription12345
C.2.1.2 Response

HTTP/1.1 204 No Content
Date: Thu, 04 Jun 2010 02:52:00 GMT
Appendix D. JSON examples

JSON (JavaScript Object Notation) is a lightweight, text-based, language-independent data interchange format. It provides a simple means to represent basic name-value pairs, arrays and objects. JSON is relatively trivial to parse and evaluate using standard JavaScript libraries, and hence is suited for invocations from browsers or other processors with JavaScript engines. Further information on JSON can be found at [RFC 4627].

The following examples show the request and response for various operations using a JSON binding. The examples follow the XML to JSON serialization rules in [REST_NetAPI_Common]. A JSON response can be obtained by using the content type negotiation mechanism specified in [REST_NetAPI_Common].

For full details on the operations themselves please refer to the section number indicated.

D.1 Retrieve device capabilities (section 6.1.3.1)

Request:

GET /exampleAPI/devicecapabilities/v1/tel%3A%2B19585550100/capabilities HTTP/1.1
Accept: application/json
Host: example.com

Response:

HTTP/1.1 200 OK
Date: Thu, 04 Jun 2010 02:52:00 GMT
Content-Type: application/json
Content-Length: nnnn

{"deviceCapabilities": {"deviceId": "123456789012345",
"link": {"href": "http://example.com/exampleconfigurations/exampledeviceprofiles/A1234xyz123.xml",
"rel": "UserAgentProfileReference"},
"name": "devname123",
"resourceURL": "http://example.com/exampleAPI/devicecapabilities/v1/tel%3A%2B19585550100/capabilities"}}

D.2 Retrieve list of subscriptions (section 6.2.3.1)

Request:

GET /exampleAPI/devicecapabilities/v1/tel%3A%2B19585550100/subscriptions?resFormat=JSON HTTP/1.1
Accept: application/json
Host: example.com

Response:

HTTP/1.1 200 OK
Date: Thu, 04 Jun 2010 02:52:00 GMT
Content-Type: application/json
Content-Length: nnnn

{"deviceCapabilitiesChangeSubscriptionList": {"}}
D.3 Subscribe to device capabilities changes notifications for single device using ‘tel’ URI (section 6.2.5.1)

Request:

POST /exampleAPI/devicecapabilities/v1/tel%3A%2B19585550100/subscriptions HTTP/1.1
Accept: application/json
Host: example.com
Content-Type: application/json
Content-Length: nnnn

{"deviceCapabilitiesChangeSubscription": {
  "callbackReference": {
    "callbackData": "12345",
    "notificationFormat": "JSON",
    "notifyURL": "http://application.example.com/notifications/CapabilitiesChangeNotification"
  },
  "clientCorrelator": "54321",
  "resourceURL": "http://example.com/exampleAPI/devicecapabilities/v1/tel%3A%2B19585550100/subscriptions/sub123",
  "timeCreated": "2010-03-21T13:23:21Z"
}}

Response:

HTTP/1.1 201 Created
Date: Thu, 04 Jun 2010 02:52:00 GMT
Location: http://example.com/exampleAPI/devicecapabilities/v1/tel%3A%2B19585550100/subscriptions/sub123
Content-Type: application/json
Content-Length: nnnn

{"deviceCapabilitiesChangeSubscription": {
  "callbackReference": {
    "callbackData": "12345",

  "timeCreated": "2010-03-21T13:23:21Z"}
D.4 Subscribe to device capabilities changes notifications for single device using ‘acr’ URI (section 6.2.5.2)

Request:

POST /exampleAPI/devicecapabilities/v1/acr%3Apseudonym123/subscriptions HTTP/1.1
Accept: application/json
Host: example.com
Content-Type: application/json
Content-Length: nnnn

{"deviceCapabilitiesChangeSubscription": {
    "callbackReference": {
        "callbackData": "12345",
        "notificationFormat": "JSON",
        "notifyURL": "http://application.example.com/notifications/CapabilitiesChangeNotification"
    },
    "clientCorrelator": "54321",
    "timeCreated": "2010-03-21T13:23:21Z"
}}

Response:

HTTP/1.1 201 Created
Date: Thu, 04 Jun 2010 02:52:00 GMT
Location: http://example.com/exampleAPI/devicecapabilities/v1/acr%3Apseudonym123/subscriptions/sub123
Content-Type: application/json
Content-Length: nnnn

{"deviceCapabilitiesChangeSubscription": {
    "callbackReference": {
        "callbackData": "12345",
        "notificationFormat": "JSON",
        "notifyURL": "http://application.example.com/notifications/CapabilitiesChangeNotification"
    },
    "clientCorrelator": "54321",

    "timeCreated": "2010-03-21T13:23:21Z"
}}

D.6 Delete subscription (section 6.3.6.1)

Request:

DELETE /exampleAPI/devicecapabilities/v1/tel%3A%2B195855550100/subscriptions/sub123 HTTP/1.1
Accept: application/json
Host: example.com

Response:

HTTP/1.1 204 No Content
Date: Thu, 04 Jun 2010 02:52:00 GMT

D.7 Device capabilities changes notification (section 6.4.5.1)

Request:

POST /notifications/CapabilityChangeNotification HTTP/1.1
Accept: application/json
Host: application.example.com
Content-Type: application/json
Content-Length: nnnn

{"deviceCapabilitiesNotification": {
    "callbackData": "12345",
    "changeNotificationEnd": "false",
    "deviceAddress": "tel:+195855550100",
    "deviceId": "123456789012345",
    "link": [
        {
            "href": "http://example.com/exampleAPI/devicecapabilities/v1/tel%3A%2B195855550100/subscriptions/sub123",
            "rel": "DeviceCapabilitiesChangeSubscription"
        }
    ]
}}
D.8 End of changes notification (section 6.4.5.2)

Request:

POST /notifications/CapabilitiesChangeNotification HTTP/1.1
Accept: application/json
Host: application.example.com
Content-Type: application/json
Content-Length: nnnn

{"deviceCapabilitiesNotification": {
  "callbackData": "12345",
  "changeNotificationEnd": "true",

Table 1: Parlay X operations mapping
Appendix F. Light-weight resources (Informative)

As this version of the specification does not define any light-weight resources, this Appendix is empty.
Appendix G. Authorization aspects (Normative)

This appendix specifies how to use the RESTful DeviceCapabilities API in combination with some authorization frameworks.

G.1 Use with OMA Authorization Framework for Network APIs

The RESTful Device Capabilities API MAY support the authorization framework defined in [Autho4API_10].

A RESTful Device Capabilities API supporting [Autho4API_10]:

- SHALL conform to section D.1 of [REST_NetAPI_Common];
- SHALL conform to this section G.1.

G.1.1 Scope values

G.1.1.1 Definitions

In compliance with [Autho4API_10], an authorization server serving clients requests for getting authorized access to the resources exposed by the RESTful Device Capabilities API:

- SHALL support the scope values defined in the table below;
- MAY support scope values not defined in this specification.

<table>
<thead>
<tr>
<th>Scope value</th>
<th>Description</th>
<th>For one-time access token</th>
</tr>
</thead>
<tbody>
<tr>
<td>oma_rest_devicecapabilities.all_{apiVersion}</td>
<td>Provide access to all defined operations on the resources in this version of the API. The {apiVersion} part of this identifier SHALL have the same value as the &quot;apiVersion&quot; URL variable which is defined in section 5.1. This scope value is the union of the other scope values listed in next rows of this table.</td>

Table 2: Scope values for RESTful Device Capabilities API

G.1.1.2 Downscoping

In the case where the client requests authorization for “oma_rest_devicecapabilities.all_{apiVersion}” scope, the authorization server and/or resource owner MAY restrict the granted scope to some of the following scope values:

- “oma_rest_devicecapabilities.cap”
- “oma_rest_devicecapabilities.subscr”
- “oma_rest_devicecapabilities.config_all”
- “oma_rest_devicecapabilities.config_read”
In the case where the client requests authorization for “oma_rest_devicecapabilities.config_all” scope, the authorization server and/or resource owner MAY restrict the granted scope to some of the following scope values:

- “oma_rest_devicecapabilities.config_read”

**G.1.1.3 Mapping with resources and methods**

Tables in this section specify how the scope values defined in section G.1.1.1 for the RESTful Device Capabilities API map to the REST resources and methods of this API. In these tables, the root “oma_rest_devicecapabilities.” of scope values is omitted for readability reasons.

Table 5: Required scope values for: Retrieving configuration (available or history) and pushing a configuration
G.1.2 Use of ‘acr:auth’

This section specifies the use of ‘acr:auth’ in place of an end user identifier in a resource URL path.

An ‘acr’ URI of the form ‘acr:auth’, where ‘auth’ is a reserved keyword MAY be used to avoid exposing a real end user identifier in the resource URL path.

A client MAY use ‘acr:auth’ in a resource URL in place of the {equipmentId} resource URL variable in the resource URL path, when the RESTful Device Capabilities API is used in combination with [Autho4API_10].

In the case the RESTful Device Capabilities supports [Autho4API_10], the server:
- SHALL accept ‘acr:auth’ as a valid value for the resource URL variable {equipmentId}.
- SHALL conform to [REST_Common_TS] section 5.8.1.1 regarding the processing of ‘acr:auth’.
