1. Scope

The Instant Messaging and Presence Service (IMPS) includes four primary features:

- Presence
- Instant Messaging
- Groups
- Shared Content

Presence is the key enabling technology for IMPS. It includes client device availability (my phone is on/off, in a call), user status (available, unavailable, in a meeting), location, client device capabilities (voice, text, GPRS, multimedia) and searchable personal statuses such as mood (happy, angry) and hobbies (football, fishing, computing, dancing). Since presence information is personal, it is only made available according to the user's wishes - access control features put the control of the user presence information in the users' hands.

Instant Messaging (IM) is a familiar concept in both the mobile and desktop worlds. Desktop IM clients, two-way SMS and two-way paging are all forms of Instant Messaging. Wireless Village IM will enable interoperable mobile IM in concert with other innovative features to provide an enhanced user experience.

Groups or chat are a fun and familiar concept on the Internet. Both operators and end-users are able to create and manage groups. Users can invite their friends and family to chat in group discussions. Operators can build common interest groups where end-users can meet each other online.

Shared Content allows users and operators to setup their own storage area where they can post pictures, music and other multimedia content while enabling the sharing with other individuals and groups in an IM or chat session.

These features, taken in part or as a whole, provide the basis for innovative new services that build upon a common interoperable framework.

4. Introduction

This document describes how XML is utilized to carry IMPS primitives and the information elements within.

The document provides the DTD and the TransactionContent namespace as well as examples of each transaction.

Binary content cannot be included in the XML document directly, because it may invalidate the document. Thus, the binary content **MUST** be encoded with the BASE64 encoding algorithm, as defined in [RFC2045].

If an optional informational element, or a conditional information element where the condition is false is omitted in the CSP primitive, it **SHOULD** be omitted from XML representation as well where applicable.

The 'Mode' element **MUST** be 'Request' in the request primitives and 'Response' in the response primitives.

Each primitive that is sent from the SAP **MUST** contain the 'Poll' element. The SAP uses the 'Poll' element to indicate that it has something to send. Whenever the 'Poll' element indicates true ('T'), the client **MUST** send PollingRequest to the SAP. See [CSP] for more information.

Any primitive that is sent from the SAP **MAY** contain the 'CIR' element. The SAP uses the 'CIR' element to indicate to the client that the CIR channel is not available. When the value of the 'CIR' element is false ('F') it means that the CIR channel is not available, and the client **SHOULD** re-establish it. See [CSP] for more information.

7. Extension Framework

7.1 Extending Existing Primitives

The extension block is defined using the XML element “ExtBlock”. The ExtBlock element MUST include a namespace attribute, and it MAY be added into the “TransactionContent” block. More than one extension block MAY be added to the “TransactionContent” block.

In the following example, an extension block is added to the Status primitive:

```
<WV-CSP-Message xmlns="http://www.openmobilealliance.org/DTD/IMPS-CSP1.3">
  <Session>
    <SessionDescriptor>
      <SessionType>Inband</SessionType>
      <SessionID>im.user.com#48815@server.com</SessionID>
    </SessionDescriptor>
    <Transaction>
      <TransactionDescriptor>
        <TransactionMode>Response</TransactionMode>
        <TransactionID>IMApp01#12347@NOK5110</TransactionID>
      </TransactionDescriptor>
      <TransactionContent xmlns="http://www.openmobilealliance.org/DTD/IMPS-TRC1.3">
        <Status>
          <Result>
            <Code>200</Code>
          </Result>
        </Status>
        <TransactionContent>
          <ExtBlock xmlns="foo.com/V1.2">
            <!-- extended information can be added in this block -->
          </ExtBlock>
        </TransactionContent>
      </Transaction>
    </Session>
  </WV-CSP-Message>
```

7.2 Introducing New Primitives

New primitives MUST use the “ExtendedRequest” and “ExtendedResponse” elements, for example:

```
<WV-CSP-Message xmlns="http://www.openmobilealliance.org/DTD/IMPS-CSP1.3">
  <Session>
    <SessionDescriptor>
      <SessionType>Inband</SessionType>
      <SessionID>im.user.com#48815@server.com</SessionID>
    </SessionDescriptor>
    <Transaction>
      <TransactionDescriptor>
        <TransactionMode>Request</TransactionMode>
        <TransactionID>IMApp01#12347@NOK5110</TransactionID>
      </TransactionDescriptor>
      <TransactionContent xmlns="http://www.openmobilealliance.org/DTD/IMPS-TRC1.3">
        <Extended-Request xmlns="www.foo.com/V1.0">
          <SomeElement>
            <!-- Primitive elements may be added here -->
          </SomeElement>
        </Extended-Request>
      </TransactionContent>
    </Transaction>
    <Poll>F</Poll>
  </Session>
</WV-CSP-Message>
```

7.3 Extending End-to-end Messages

The extension block in end-to-end messages is defined using the XML element “ExtBlockETEM”. The ExtBlockETEM element MUST include a namespace attribute, and it MAY be added into the instant message and invitation-related primitives. More than one extended block MAY be added to the primitives.

In the following example, an end-to-end extension block is added to the SendMessage primitive:

```
<WV-CSP-Message xmlns="http://www.openmobilealliance.org/DTD/IMPS-CSP1.3">
  <Session>
    <SessionDescriptor>
      <SessionType>Inband</SessionType>
      <SessionID>im.user.com#48815@server.com</SessionID>
    </SessionDescriptor>
    <Transaction>
      <TransactionDescriptor>
        <TransactionMode>Request</TransactionMode>
        <TransactionID>IMApp01#12345@NOK5110</TransactionID>
      </TransactionDescriptor>
      <TransactionContent xmlns="http://www.openmobilealliance.org/DTD/IMPS-TRC1.3">
        <SendMessage-Request>
          <DeliveryReport>T</DeliveryReport>
          <MessageInfo>

B.2 Transaction Requirements

B.2.1 Clients

Item	Function	Reference	Status	Requirement
IMPS-CSP-TRANSX-C-001	For a request primitive, the Mode element MUST be 'Request'	4	M	
IMPS-CSP-TRANSX-C-002	For a response primitive, the Mode element MUST be 'Response'.	4	M	
IMPS-CSP-TRANSX-C-003	If a primitive contains the Poll element and it is indicating true ('T'), the client sends PollingRequest primitive to the server.	4	M	

B.2.2 Servers

Item	Function	Reference	Status	Requirement
IMPS-CSP-TRANSX-S-001	For a request primitive, the Mode element MUST be 'Request'	4	M	
IMPS-CSP-TRANSX-C-004	For a response primitive, the Mode element MUST be 'Response'.	4	M	
IMPS-CSP-TRANSX-C-005	The server-originated primitives contain the Poll element.	4	M	
IMPS-CSP-TRANSX-C-006	The server-originated primitives contain the CIR element.	4	O	IMPS-CSP-TRANSX-S-7
IMPS-CSP-TRANSX-C-007	When the server discovers that the CIR channel over the standalone TCP/IP is disconnected, the server-originated primitive contains the CIR element with the value 'F'.	4	O	IMPS-CSP-TRANSX-S-6

C.13 Segmentation mechanism example

The following example demonstrates how a client retrieves a long grant and block list in segments from the server – assuming a block list (40 users) in use and a grant list (10 users) not in use. Note that in order to make the example shorter, not all users are listed.
