1. Scope

OMA IOP MEC as a sub-working group (SWG) to OMA IOP WG has compiled this report to summarize the efforts done to prove the interoperability aspects of the OMA Mobile Location Protocol V3.1 (MLP) enabler, as it is being considered for approval by the OMA Technical Plenary as an OMA Enabler Release.

This document provides information needed by the OMA Technical Plenary to consider the approval of OMA Mobile Location Protocol V3.1 Enabler Release from an IOP perspective.
2. References

3. Terminology and Conventions

3.1 Conventions

This is an informative document, which is not intended to provide testable requirements to implementations.

3.2 Definitions

3.3 Abbreviations
4. Summary

MLP 3.1 was abandoned by the LOC group. IOP MEC did not produce any test specification for MLP 3.1 and no test activities were carried out.

This IOP report was produced to facilitate the administrative approval of the abandoned MLP 3.1 enabler.

For the reasons above IOP MEC concludes that the enabler can be moved to the approved release status.
5. Testing of Enablers

5.1 Documentation

This chapter lists the details of the enabler and any documentation, tools or test suites used to prove the enabler.

5.2 Test Case Statistics

This chapter lists the statistics for Enabler Validation Test Cases defined by [EVP]

The following status is used in the tables below:

- **Runs (R):** Used to indicate the total number of times the test case have been run (R = P + F + I).
- **Pass (P):** Used to indicate how many times the test case have been run and successfully passed.
- **Fail (F):** Used to indicate how many times the test cases have been run and failed (used when the failure reason is known).
- **Inconclusive (I):** Used to indicate how many times the test cases have been run and did not pass due to other nature than conclusive implementation or specification failure (e.g.: the failure reason cannot be clearly determined).
- **Not Applicable (N/A):** Used to indicate how many times the test cases have not be run due to lack of support for the required functionality to run this test case by one or more involved implementations.
- **Out of Time (O):** Used to indicate how many times the test cases have not been run due to lack of time.
- **Problem Report (PR):** Used to indicate how many PRs have been issued for the test case.
- **Note:** Used to indicate the cause of the Inconclusive or Failed results.
Test Case Id | Description | Test Counts | PR | Note
--- | --- | --- | --- | ---
N/A | | | | |
N/A | | | | |

Table 2: Test Case Statistics

### 5.3 Test Evidence

For Enabler MLP 3.1 no testing has been done in OMA.

#### 5.3.1 Test Case Summary from all TestFests

This chapter gives an overview of the result for all Enabler Validation Test Cases defined by [ETG] from all TestFests.

The following status is used in the tables below:

- Total number of TCs: Used in the summary to indicate how many test cases there are in total.
- Number of passed: Used in the summary to indicate how many of the total test cases that successfully has been passed.
- Number of failed: Used in the summary to indicate how many of the total test cases that has failed.
- Number of N/A: Used in the summary to indicate how many of the total test cases that has not be run due to that the implementation(s) do not support the functionality required to run this test case.
- Number of OT: Used in the summary to indicate how many of the total test cases that have not be run due to no time to run the test case.
- Number of INC: Used to indicate how many times the test cases have been run and did not pass due to other nature than conclusive implementation or specification failure (e.g.: the failure reason cannot be clearly determined).
