RESTful bindings for Parlay X Web Services - Payment

Approved Version 1.1 – 24 Jul 2012

Open Mobile Alliance
OMA-TS-ParlayREST_Payment-V1_1-20120724-A
Use of this document is subject to all of the terms and conditions of the Use Agreement located at http://www.openmobilealliance.org/UseAgreement.html.

Unless this document is clearly designated as an approved specification, this document is a work in process, is not an approved Open Mobile Alliance™ specification, and is subject to revision or removal without notice.

You may use this document or any part of the document for internal or educational purposes only, provided you do not modify, edit or take out of context the information in this document in any manner. Information contained in this document may be used, at your sole risk, for any purposes. You may not use this document in any other manner without the prior written permission of the Open Mobile Alliance. The Open Mobile Alliance authorizes you to copy this document, provided that you retain all copyright and other proprietary notices contained in the original materials on any copies of the materials and that you comply strictly with these terms. This copyright permission does not constitute an endorsement of the products or services. The Open Mobile Alliance assumes no responsibility for errors or omissions in this document.

Each Open Mobile Alliance member has agreed to use reasonable endeavors to inform the Open Mobile Alliance in a timely manner of Essential IPR as it becomes aware that the Essential IPR is related to the prepared or published specification. However, the members do not have an obligation to conduct IPR searches. The declared Essential IPR is publicly available to members and non-members of the Open Mobile Alliance and may be found on the “OMA IPR Declarations” list at http://www.openmobilealliance.org/ipr.html. The Open Mobile Alliance has not conducted an independent IPR review of this document and the information contained herein, and makes no representations or warranties regarding third party IPR, including without limitation patents, copyrights or trade secret rights. This document may contain inventions for which you must obtain licenses from third parties before making, using or selling the inventions. Defined terms above are set forth in the schedule to the Open Mobile Alliance Application Form.

NO REPRESENTATIONS OR WARRANTIES (WHETHER EXPRESS OR IMPLIED) ARE MADE BY THE OPEN MOBILE ALLIANCE OR ANY OPEN MOBILE ALLIANCE MEMBER OR ITS AFFILIATES REGARDING ANY OF THE IPR’S REPRESENTED ON THE “OMA IPR DECLARATIONS” LIST, INCLUDING, BUT NOT LIMITED TO THE ACCURACY, COMPLETENESS, VALIDITY OR RELEVANCE OF THE INFORMATION OR WHETHER OR NOT SUCH RIGHTS ARE ESSENTIAL OR NON-ESSENTIAL.

THE OPEN MOBILE ALLIANCE IS NOT LIABLE FOR AND HEREBY DISCLAIMS ANY DIRECT, INDIRECT, PUNITIVE, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES ARISING OUT OF OR IN CONNECTION WITH THE USE OF DOCUMENTS AND THE INFORMATION CONTAINED IN THE DOCUMENTS.

5.9.1  Request URI variables .................................................. 60
5.9.2  Response Codes .............................................................. 60
5.9.2.1  HTTP Response Codes .................................................. 60
5.9.2.2  Exception fault codes ................................................... 60
5.9.3  GET .............................................................................. 61
5.9.3.1  Example: get all volume charge and refund transactions (Informative) .................................................. 61
5.9.3.1.1  Request .................................................................. 61
5.9.3.1.2  Response ................................................................. 61
5.9.4  PUT .............................................................................. 62
5.9.5  POST ............................................................................ 62
5.9.5.1  Example 1: create charge volume, returning a representation of created resource (Informative) .................. 62
5.9.5.1.1  Request .................................................................. 62
5.9.5.1.2  Response ................................................................. 62
5.9.5.2  Example 2: create charge volume, returning the location of created resource (Informative) .................. 63
5.9.5.2.1  Request .................................................................. 63
5.9.5.2.2  Response ................................................................. 63
5.9.5.3  Example 3: create refund volume (Informative) ......................................................................................... 64
5.9.5.3.1  Request .................................................................. 64
5.9.5.3.2  Response ................................................................. 64
5.9.6  DELETE ....................................................................... 65

5.10  **RESOURCE: ALL VOLUME SPLIT CHARGE TRANSACTIONS FOR AN END USER** ............................. 65

5.10.1  Request URI variables .................................................. 65
5.10.2  Response Codes .............................................................. 65
5.10.2.1  HTTP Response Codes .................................................. 65
5.10.2.2  Exception fault codes ................................................... 65
5.10.3  GET .............................................................................. 66
5.10.3.1  Example: get all volume split charge transactions (Informative) .......................................................... 66
5.10.3.1.1  Request .................................................................. 66
5.10.3.1.2  Response ................................................................. 66
5.10.4  PUT .............................................................................. 67
5.10.5  POST ............................................................................ 67
5.10.5.1  Example: create volume split charge (Informative) ..................................................................................... 67
5.10.5.1.1  Request .................................................................. 67
5.10.5.1.2  Response ................................................................. 67
5.10.6  DELETE ....................................................................... 68

5.11  **RESOURCE: INDIVIDUAL VOLUME CHARGE OR REFUND TRANSACTION FOR AN END USER** .................. 68

5.11.1  Request URI variables .................................................. 68
5.11.2  Response Codes .............................................................. 69
5.11.2.1  HTTP Response Codes .................................................. 69
5.11.2.2  Exception fault codes ................................................... 69
5.11.3  GET .............................................................................. 69
5.11.3.1  Example: get volume charge (Informative) ................................................................................................. 69
5.11.3.1.1  Request .................................................................. 69
5.11.3.1.2  Response ................................................................. 69
5.11.4  PUT .............................................................................. 70
5.11.5  POST ............................................................................ 70
5.11.6  DELETE ....................................................................... 70

5.12  **RESOURCE: INDIVIDUAL VOLUME SPLIT CHARGE TRANSACTION FOR AN END USER** ......................... 70

5.12.1  Request URI variables .................................................. 70
5.12.2  Response Codes .............................................................. 70
5.12.2.1  HTTP Response Codes .................................................. 70
5.12.2.2  Exception fault codes ................................................... 70
5.12.3  GET .............................................................................. 71
5.12.3.1  Example: get volume split charge (Informative) ............................................................................................. 71
5.12.3.1.1  Request .................................................................. 71
5.12.3.1.2  Response ................................................................. 71
5.12.4  PUT .............................................................................. 71
5.12.5  POST ............................................................................ 72
5.12.6  DELETE ....................................................................... 72
5.13 **RESOURCE: INDIVIDUAL AMOUNT FOR VOLUME CHARGE OR REFUND TRANSACTION FOR AN END USER** ........................................... 72

5.13.1 Request URI variables ................................................................................................................................. 72
5.13.2 Response Codes .............................................................................................................................................. 72
  5.13.2.1 HTTP Response Codes .............................................................................................................................. 72
  5.13.2.2 Exception fault codes ............................................................................................................................ 72
5.13.3 GET ............................................................................................................................................................... 72
  5.13.3.1 Example: get amount for volume charge (Informative) ........................................................................ 73
    5.13.3.1.1 Request.................................................................................................................................................. 73
    5.13.3.1.2 Response.............................................................................................................................................. 73
5.13.4 PUT ............................................................................................................................................................. 73
5.13.5 POST ........................................................................................................................................................... 73
5.13.6 DELETE ....................................................................................................................................................... 73

5.14 **RESOURCE: INDIVIDUAL AMOUNT FOR VOLUME SPLIT CHARGE TRANSACTION FOR AN END USER** ............................... 73

5.14.1 Request URI variables ..................................................................................................................................... 74
5.14.2 Response Codes ............................................................................................................................................. 74
  5.14.2.1 HTTP Response Codes ............................................................................................................................ 74
  5.14.2.2 Exception fault codes ................................................................................................................................ 74
5.14.3 GET ............................................................................................................................................................. 74
  5.14.3.1 Example: get amount for volume split charge (Informative) ................................................................. 74
    5.14.3.1.1 Request.................................................................................................................................................. 74
    5.14.3.1.2 Response.............................................................................................................................................. 74
5.14.4 PUT ............................................................................................................................................................. 75
5.14.5 POST ........................................................................................................................................................... 75
5.14.6 DELETE ....................................................................................................................................................... 75

5.15 **RESOURCE: ALL AMOUNT RESERVATION TRANSACTIONS FOR AN END USER** .............................................................. 75

5.15.1 Request URI variables ..................................................................................................................................... 75
5.15.2 Response Codes ............................................................................................................................................. 75
  5.15.2.1 HTTP Response Codes ............................................................................................................................ 75
  5.15.2.2 Exception fault codes ................................................................................................................................ 75
5.15.3 GET ............................................................................................................................................................. 75
  5.15.3.1 Example: get all amount reservation transactions (Informative) .......................................................... 76
    5.15.3.1.1 Request.................................................................................................................................................. 76
    5.15.3.1.2 Response.............................................................................................................................................. 76
5.15.4 PUT ............................................................................................................................................................. 76
5.15.5 POST ........................................................................................................................................................... 78
  5.15.5.1 Example: create amount reservation (Informative) ................................................................................. 78
    5.15.5.1.1 Request.................................................................................................................................................. 78
    5.15.5.1.2 Response.............................................................................................................................................. 78
5.15.6 DELETE ....................................................................................................................................................... 79

5.16 **RESOURCE: INDIVIDUAL AMOUNT RESERVATION TRANSACTION FOR AN END USER** ........................................................ 79

5.16.1 Request URI variables ..................................................................................................................................... 79
5.16.2 Response Codes ............................................................................................................................................. 79
  5.16.2.1 HTTP Response Codes ............................................................................................................................ 79
  5.16.2.2 Exception fault codes ................................................................................................................................ 80
5.16.3 GET ............................................................................................................................................................. 80
  5.16.3.1 Example: get amount reservation (Informative) ...................................................................................... 80
    5.16.3.1.1 Request.................................................................................................................................................. 80
    5.16.3.1.2 Response.............................................................................................................................................. 80
5.16.4 PUT ............................................................................................................................................................. 80
5.16.5 POST ........................................................................................................................................................... 81
  5.16.5.1 Example 1: charge amount for amount reservation (informative) .......................................................... 81
    5.16.5.1.1 Request.................................................................................................................................................. 81
    5.16.5.1.2 Response.............................................................................................................................................. 81
  5.16.5.2 Example 2: repeat a charge request with same referenceSequence for an amount reservation transaction
    (Informative) ......................................................................................................................................................... 81
    5.16.5.2.1 Request.................................................................................................................................................. 82
    5.16.5.2.2 Response.............................................................................................................................................. 82
  5.16.5.3 Example 3: release amount reservation (Informative) ............................................................................... 83
    5.16.5.3.1 Request.................................................................................................................................................. 83
    5.16.5.3.2 Response.............................................................................................................................................. 83
  5.16.5.4 Example 4: charge partial amount for amount reservation (Informative) ................................................. 84
5.17 **RESOURCE: ALL VOLUME RESERVATION TRANSACTIONS FOR AN END USER** .................................................. 88

5.17.1 Request URI variables ................................................................. 88

5.17.2 Response Codes ........................................................................ 89

5.17.2.1 HTTP Response Codes .......................................................... 89

5.17.2.2 Exception fault codes ............................................................. 89

5.17.3 GET......................................................................................... 89

5.17.3.1 Example: get all volume reservation transactions (Informative) ................................................................ 89

5.17.3.1.1 Request ............................................................................ 89

5.17.3.1.2 Response .......................................................................... 89

5.17.4 PUT ........................................................................................... 90

5.17.5 POST ...................................................................................... 90

5.17.5.1 Example 1: create reserve volume (Informative) ..................... 91

5.17.5.1.1 Request ............................................................................ 91

5.17.5.1.2 Response .......................................................................... 91

5.17.5.2 Example 2: create reserve volume with invalid (non-existing) endUserID (Informative) ......................... 92

5.17.5.2.1 Request ............................................................................ 92

5.17.5.2.2 Response .......................................................................... 92

5.17.6 DELETE .................................................................................. 93

5.18 **RESOURCE: INDIVIDUAL VOLUME RESERVATION TRANSACTION FOR AN END USER** ......................... 93

5.18.1 Request URI variables ................................................................. 93

5.18.2 Response Codes ........................................................................ 93

5.18.2.1 HTTP Response Codes .......................................................... 93

5.18.2.2 Exception fault codes ............................................................. 93

5.18.3 GET......................................................................................... 93

5.18.3.1 Example: get volume reservation (Informative) ..................... 93

5.18.3.1.1 Request ............................................................................ 93

5.18.3.1.2 Response .......................................................................... 94

5.18.4 PUT ........................................................................................... 94

5.18.5 POST ...................................................................................... 94

5.18.5.1 Example: charge volume (Informative) ................................. 94

5.18.5.1.1 Request ............................................................................ 94

5.18.5.1.2 Response .......................................................................... 94

5.18.6 DELETE .................................................................................. 95

5.19 **RESOURCE: INDIVIDUAL AMOUNT FOR VOLUME RESERVATION TRANSACTION FOR AN END USER** .......... 96

5.19.1 Request URI variables ................................................................. 96

5.19.2 Response Codes ........................................................................ 96

5.19.2.1 HTTP Response Codes .......................................................... 96

5.19.2.2 Exception fault codes ............................................................. 96

5.19.3 GET......................................................................................... 96

5.19.3.1 Example: get amount for volume reservation (Informative) ................................................................ 96

5.19.3.1.1 Request ............................................................................ 96

5.19.3.1.2 Response .......................................................................... 97

5.19.4 PUT ........................................................................................... 97

5.19.5 POST ...................................................................................... 97

5.19.6 DELETE .................................................................................. 97

5.20 **RESOURCE: AMOUNT CONVERTED FROM GIVEN VOLUME**................................................................. 97

5.20.1 Request URI variables ................................................................. 97

5.20.2 Response Codes ........................................................................ 98

APPENDIX D. JSON EXAMPLES (INFORMATIVE) .......................................................................................................................... 125
D.1 GET ALL TRANSACTIONS (SECTION 5.4.3.1) ............................................................................................................................... 125
D.2 REQUEST WITH INVALID ENDUSERID (SECTION 5.4.3.2) ........................................................................................................... 129
D.3 GET ALL AMOUNT TRANSACTIONS (SECTION 5.5.3.1) .............................................................................................................. 129
D.4 CREATE CHARGE AMOUNT (SECTION 5.5.5.1) ......................................................................................................................... 131
D.5 CREATE REFUND AMOUNT (SECTION 5.5.5.2) .......................................................................................................................... 132
D.6 CLIENT RETRIES POST WITH SAME CLIENTCORRELATOR (SECTION 5.5.5.3) .................................................................. 133
D.7 UNSUCCESSFUL CHARGE REQUEST BECAUSE OF DENIAL/REFUSAL BY BACK-END SYSTEM (SECTION 5.5.5.4) .............. 133
D.8 GET ALL AMOUNT SPLIT TRANSACTIONS (SECTION 5.6.3.1) ................................................................................................. 134
D.9 CREATE SPLIT CHARGE AMOUNT (SECTION 5.6.5.1) .................................................................................................................. 136
D.10 GET AMOUNT CHARGE (SECTION 5.7.3.1) ............................................................................................................................. 137
D.11 GET AMOUNT SPLIT CHARGE (SECTION 5.8.3.1) ........................................................................................................................ 137
D.12 GET ALL VOLUME CHARGE AND REFUND TRANSACTIONS (SECTION 5.9.3.1) ................................................................. 138
D.13 CREATE CHARGE VOLUME, RETURNING A REPRESENTATION OF CREATED RESOURCE (SECTION 5.9.5.1).......................... 139
D.14 CREATE CHARGE VOLUME, RETURNING THE LOCATION OF CREATED RESOURCE (SECTION 5.9.5.2) .................... 140
D.15 CREATE REFUND VOLUME (SECTION 5.9.5.3) .......................................................................................................................... 141
D.16 GET ALL VOLUME SPLIT CHARGE TRANSACTIONS (SECTION 5.10.3.1) ........................................................................ 142
D.17 CREATE VOLUME SPLIT CHARGE (SECTION 5.10.5.1) .............................................................................................................. 143
D.18 GET VOLUME CHARGE (SECTION 5.11.3.1) ............................................................................................................................. 144
D.19 GET VOLUME SPLIT CHARGE (SECTION 5.12.3.1) ........................................................................................................................ 145
D.20 GET AMOUNT FOR VOLUME CHARGE (SECTION 5.13.3.1) ........................................................................................................ 146
D.21 GET AMOUNT FOR VOLUME SPLIT CHARGE (SECTION 5.14.3.1) ......................................................................................... 146
D.22 GET ALL AMOUNT RESERVATION TRANSACTIONS (SECTION 5.15.3.1) ...................................................................... 146
D.23 CREATE RESERVE AMOUNT (SECTION 5.15.5.1) ..................................................................................................................... 148
D.24 GET AMOUNT RESERVATION (SECTION 5.16.3.1) ........................................................................................................................ 149
D.25 CHARGE AMOUNT FOR AMOUNT RESERVATION (SECTION 5.16.5.1) ................................................................................ 150

1. Scope

This specification defines a RESTful Payment API using an HTTP protocol binding, based on the similar API defined in [3GPP 29.199-6].

3. Terminology and Conventions

3.1 Conventions

The key words “MUST”, “MUST NOT”, “REQUIRED”, “SHALL”, “SHALL NOT”, “SHOULD”, “SHOULD NOT”, “RECOMMENDED”, “MAY”, and “OPTIONAL” in this document are to be interpreted as described in [RFC2119].

All sections and appendixes, except “Scope” and “Introduction”, are normative, unless they are explicitly indicated to be informative.

3.2 Definitions

For the purpose of this TS, all definitions from the OMA Dictionary apply [OMADICT].

4. Introduction

The ParlayREST Technical Specification for Payment contains the HTTP protocol binding for the Parlay X Payment Web Services specification, using the REST architectural style. The specification provides resource definitions, the HTTP verbs applicable for each of these resources, and the element data structures, as well as support material including flow diagrams and examples using the various supported message body formats (i.e. XML, JSON, and form-urlencoding).

4.1 Version 1.0

Version 1.0 of the Payment API specification supports the following operations:

- Charging an amount, split amount, volume or split volume to an end user’s account
- Refunding an amount or volume to an end user’s account
- Reserving an amount or volume for an end user’s account
- Adding an amount or volume to an existing reservation
- Charging to a previously made reservation
- Releasing funds left in a previously made reservation

4.2 Version 1.1

Version 1.1 of the Payment API specification is a maintenance release.
5. Payment API definition

This section is organized to support a comprehensive understanding of the Payment API design. It specifies the definition of all resources, definition of all data structures, and definitions of all operations permitted on the specified resources.

Common data types, naming conventions, fault definitions and namespaces are defined in [REST_TS_Common] and [OMA_REST_TS_Common].

The remainder of this document is structured as follows:

Section 5 starts with a table listing all the resources (and their URL) used by this API, along with the data structure and the supported HTTP verbs (section 5.1). What follows are the data structures (section 5.2). A sample of typical use cases is included in section 5.3, described as high level flow diagrams.

The remaining subsections in section 5 contain the detailed specification for each of the resources. Each such subsection defines the resource, the request URI variables that are common for all HTTP commands, the possible HTTP response codes, and the supported HTTP verbs. For each supported HTTP verb, a description of the functionality is provided, along with an example of a request and an example of a response. For each unsupported HTTP verb, the returned HTTP error status is specified, as well as what should be returned in the Allow header.

All examples in section 5 use XML as the format for the message body. Form-urlencoded examples are provided in Appendix C, while JSON examples are provided in Appendix D. Appendix B provides the Static Conformance Requirements (SCR).

Finally, Appendix E lists the Parlay X equivalent method for each supported ParlayREST resource and method combination, where applicable.

For requests and responses that have a body, the following applies: in the requests received, the server SHALL support JSON and XML encoding of the parameters in the body, and MAY support www-form-urlencoded parameters in the body. The Server SHALL return either JSON or XML encoded parameters in the response body, according to the result of the content type negotiation as specified in [OMA_REST_TS_Common]. In notifications to the Client, the server SHALL use either XML or JSON encoding, depending on which format the client has specified in the related subscription.

Note: Throughout this document client and application can be used interchangeably.

5.1 Resources Summary

This section summarizes all the resources used by the Payment API.

The figure below visualizes the resource structure defined by this specification. Note that those nodes in the resource tree which have associated HTTP methods defined in this specification are depicted by solid boxes.
Figure 1 Resource structure defined by this specification

The following tables give a detailed overview of the resources defined in this specification, the data type of their representation and the allowed HTTP methods.
## Purpose: All payment transactions

<table>

### 5.2 Payment ParlayREST API Data Structures

The namespace for the Payment data types is:

```
urn:oma:xml:rest:payment:1
```

The 'xsd' namespace is used in the present document to refer to the XML Schema data types defined in XML Schema [XMLSchema1, XMLSchema2]. The 'common' namespace is used in the present document to refer to the data types defined in [OMA_REST_TS_Common]. The use of the names 'xsd' and 'common' is not semantically significant.

---

**Purpose: Amount converted from volume transaction**

<table>
<thead>
<tr>
<th>Resource</th>
<th>URL Base URL: http://{serverRoot}/{apiVersion}/payment</th>

</tr>
</tbody>
</table>

A root element named paymentTransactionList of type PaymentTransactionList is allowed in request and/or response bodies.

5.2.2 Type: AmountTransaction

Transaction for charge or refund amount

<table>
<thead>
<tr>
<th>Element</th>
<th>Type</th>
<th>Optional</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>endUserId</td>
<td>xsd:anyURI</td>
<td>No</td>
<td>The end user's account to be charged. If endUserId is also part of the request URL, the two MUST have the same value.</td>
</tr>
<tr>
<td>paymentAmount</td>
<td>PaymentAmount</td>
<td>No</td>
<td>Information on the amount charge to be made</td>
</tr>
<tr>
<td>transactionOperationStatus</td>
<td>TransactionOperationStatus</td>
<td>No</td>
<td>E.g. charged, refunded, etc</td>
</tr>
<tr>
<td>referenceCode</td>
<td>xsd:string</td>
<td>No</td>
<td>Textual information to uniquely identify the request, e.g. in case of disputes. Used for business logic, not for operational logic.</td>
</tr>
<tr>
<td>Field</td>
<td>Type</td>
<td>Required</td>
<td>Description</td>
</tr>
<tr>
<td>------------------------------</td>
<td>---------------</td>
<td>----------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>serverReferenceCode</td>
<td>xsd:string</td>
<td>Yes</td>
<td>A unique reference to the request, provided by the server, and meaningful to the server's backend system for correlation purposes (e.g. to be used in case of a subsequent refund request related to this charge request).</td>
</tr>
<tr>
<td>originalServerReferenceCode</td>
<td>xsd:string</td>
<td>Yes</td>
<td>This can be used to reconcile a refund request with the original charge that is intended to be refunded. In case the server included a serverReferenceCode in the response to a charge request, then any subsequent client request to refund that charge SHOULD include that serverReferenceCode value in an originalServerReferenceCode field. If the client omits it from the refund request then the server MAY throw a policy exception.</td>
</tr>
<tr>
<td>clientCorrelator</td>
<td>xsd:string</td>
<td>Yes</td>
<td>A correlator that the client can use to tag this particular resource representation during a request to create a resource on the server.</td>
</tr>
<tr>
<td>resourceURL</td>
<td>xsd:anyURI</td>
<td>Yes</td>
<td>Self referring URL. SHALL NOT be included in POST requests, MUST be included in responses to any HTTP method that returns an entity body, and in PUT requests.</td>
</tr>
</tbody>
</table>

A root element named `amountTransaction` of type `AmountTransaction` is allowed in request and/or response bodies.

Note that the `clientCorrelator` is used for purposes of error recovery as specified in section 5.6.1 of [REST_TS_Common], and internal client purposes. The server is NOT REQUIRED to use the `clientCorrelator` value in any form in the creation of the URL of the resource. Section 5.6.1 of [REST_TS_Common] provides a recommendation regarding the generation of the value of this field.

### 5.2.3 Type: `AmountSplitTransaction`

Transaction for charge or refund split amount

<table>
<thead>
<tr>
<th>Element</th>
<th>Type</th>
<th>Optional</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>endUserShare</td>
<td>EndUserShare [1..unbounded]</td>
<td>No</td>
<td>This end user’s share of the split charge.</td>
</tr>
<tr>
<td>paymentAmount</td>
<td>PaymentAmount</td>
<td>No</td>
<td>Information on the amount charge to be made</td>
</tr>
<tr>
<td>transactionOperationStatus</td>
<td>TransactionOperationStatus</td>
<td>No</td>
<td>E.g. charged, refunded, etc</td>
</tr>
<tr>
<td>referenceCode</td>
<td>xsd:string</td>
<td>No</td>
<td>Textual information to uniquely identify the request, e.g. in case of disputes. Used for business logic, not for operational logic.</td>
</tr>
<tr>
<td>serverReferenceCode</td>
<td>xsd:string</td>
<td>Yes</td>
<td>A unique reference to the request, provided by the server, and meaningful to the server’s backend system for correlation purposes (e.g. to be used in case of a subsequent refund request related to this charge request).</td>
</tr>
<tr>
<td>originalServerReferenceCode</td>
<td>xsd:string</td>
<td>Yes</td>
<td>This can be used to reconcile a refund request with the original charge that is intended to be refunded. In case the server included a serverReferenceCode in the response to a charge request, then any subsequent client request to refund that charge SHOULD include that serverReferenceCode value in an originalServerReferenceCode field. If the client omits it from the refund request then the server MAY throw a policy exception.</td>
</tr>
<tr>
<td>clientCorrelator</td>
<td>xsd:string</td>
<td>Yes</td>
<td>A correlator that the client</td>
</tr>
</tbody>
</table>
can use to tag this particular resource representation during a request to create a resource on the server.

This field SHOULD be present. Note: this allows the client to recover from communication failures during resource creation and therefore avoids re-sending the message in such situations.

In case the field is present, the server SHALL not alter its value, and SHALL provide it as part of the representation of this resource. In case the field is not present, the server SHALL NOT generate it.

<table>
<thead>
<tr>
<th>resourceURL</th>
<th>xsd:anyURI</th>
<th>Yes</th>
<th>Self referring URL. SHALL NOT be included in POST requests, MUST be included in responses to any HTTP method that returns an entity body, and in PUT requests.</th>
</tr>
</thead>
<tbody>
<tr>
<td>link</td>
<td>common:Link[0..unbounded]</td>
<td>Yes</td>
<td>Provided by the server and points to other resources that are in relationship with the current resource</td>
</tr>
</tbody>
</table>

A root element named amountSplitTransaction of type AmountSplitTransaction is allowed in request and/or response bodies.

Note that the clientCorrelator is used for purposes of error recovery as specified in section 5.6.1 of [REST_TS_Common], and internal client purposes. The server is NOT REQUIRED to use the clientCorrelator value in any form in the creation of the URL of the resource. Section 5.6.1 of [REST_TS_Common] provides a recommendation regarding the generation of the value of this field.

### 5.2.4 Type: VolumeTransaction

Transaction for charge or refund volume

<table>
<thead>
<tr>
<th>Element</th>
<th>Type</th>
<th>Optional</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>endUserId</td>
<td>xsd:anyURI</td>
<td>No</td>
<td>The end user's account to be charged. If endUserId is also part of the request URL, the two MUST have the same value.</td>
</tr>
<tr>
<td>paymentVolume</td>
<td>PaymentVolume</td>
<td>No</td>
<td>Information on the volume charge to be made</td>
</tr>
<tr>
<td>transactionOperationStatus</td>
<td>TransactionOperationStatus</td>
<td>No</td>
<td>E.g. charged, refunded, etc</td>
</tr>
<tr>
<td>referenceCode</td>
<td>xsd:string</td>
<td>No</td>
<td>Textual information to uniquely identify the request, e.g. in case of disputes. Used for business logic, not for operational logic.</td>
</tr>
<tr>
<td>Field</td>
<td>Type</td>
<td>Required</td>
<td>Description</td>
</tr>
<tr>
<td>------------------------</td>
<td>--------------</td>
<td>----------</td>
<td>----------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>serverReferenceCode</td>
<td>xsd:string</td>
<td>Yes</td>
<td>A unique reference to the request, provided by the server, and meaningful to the server's backend system for correlation purposes (e.g. to be used in case of a subsequent refund request related to this charge request).</td>
</tr>
<tr>
<td>originalServerReferenceCode</td>
<td>xsd:string</td>
<td>Yes</td>
<td>This can be used to reconcile a refund request with the original charge that is intended to be refunded. In case the server included a serverReferenceCode in the response to a charge request, then any subsequent client request to refund that charge SHOULD include that serverReferenceCode value in an originalServerReferenceCode field. If the client omits it from the refund request then the server MAY throw a policy exception.</td>
</tr>
<tr>
<td>clientCorrelator</td>
<td>xsd:string</td>
<td>Yes</td>
<td>A correlator that the client can use to tag this particular resource representation during a request to create a resource on the server. This field SHOULD be present. Note: this allows the client to recover from communication failures during resource creation and therefore avoids re-sending the message in such situations. In case the field is present, the server SHALL not alter its value, and SHALL provide it as part of the representation of this resource. In case the field is not present, the server SHALL NOT generate it.</td>
</tr>
<tr>
<td>resourceURL</td>
<td>xsd:anyURI</td>
<td>Yes</td>
<td>Self referring URL. SHALL NOT be included in POST requests, MUST be included in responses to any HTTP method that returns an entity body, and in PUT requests.</td>
</tr>
<tr>
<td>link</td>
<td>common:Link[0..unbounded]</td>
<td>Yes</td>
<td>Provided by the server and</td>
</tr>
</tbody>
</table>
A root element named volumeTransaction of type VolumeTransaction is allowed in request and/or response bodies.

Note that the clientCorrelator is used for purposes of error recovery as specified in section 5.6.1 of [REST_TS_Common], and internal client purposes. The server is NOT REQUIRED to use the clientCorrelator value in any form in the creation of the URL of the resource. Section 5.6.1 of [REST_TS_Common] provides a recommendation regarding the generation of the value of this field.

### 5.2.5 Type: VolumeSplitTransaction

Transaction for charge or refund split volume

<table>
<thead>
<tr>
<th>Element</th>
<th>Type</th>
<th>Optional</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>endUserShare</td>
<td>EndUserShare [1..unbounded]</td>
<td>No</td>
<td>This end user's share of the split charge</td>
</tr>
<tr>
<td>paymentVolume</td>
<td>PaymentVolume</td>
<td>No</td>
<td>Information on the volume charge to be made</td>
</tr>
<tr>
<td>transactionOperationStatus</td>
<td>TransactionOperationStatus</td>
<td>No</td>
<td>E.g. charged, refunded, etc</td>
</tr>
<tr>
<td>referenceCode</td>
<td>xsd:string</td>
<td>No</td>
<td>Textual information to uniquely identify the request, e.g. in case of disputes. Used for business logic, not for operational logic.</td>
</tr>
<tr>
<td>serverReferenceCode</td>
<td>xsd:string</td>
<td>Yes</td>
<td>A unique reference to the request, provided by the server, and meaningful to the server's backend system for correlation purposes (e.g. to be used in case of a subsequent refund request related to this charge request).</td>
</tr>
<tr>
<td>originalServerReferenceCode</td>
<td>xsd:string</td>
<td>Yes</td>
<td>This can be used to reconcile a refund request with the original charge that is intended to be refunded. In case the server included a serverReferenceCode in the response to a charge request, then any subsequent client request to refund that charge SHOULD include that serverReferenceCode value in an originalServerReferenceCode field. If the client omits it from the refund request then the server MAY throw a policy exception.</td>
</tr>
</tbody>
</table>
| clientCorrelator         | xsd:string                          | Yes      | A correlator that the client
can use to tag this particular resource representation during a request to create a resource on the server.

This field SHOULD be present. Note: this allows the client to recover from communication failures during resource creation and therefore avoids re-sending the message in such situations.

In case the field is present, the server SHALL not alter its value, and SHALL provide it as part of the representation of this resource. In case the field is not present, the server SHALL NOT generate it.

| resourceURL | xsd:anyURI | Yes | Self referring URL. SHALL NOT be included in POST requests, MUST be included in responses to any HTTP method that returns an entity body, and in PUT requests. |
| link | common:Link[0..unbounded] | Yes | Provided by the server and points to other resources that are in relationship with the current resource |

A root element named volumeSplitTransaction of type VolumeSplitTransaction is allowed in request and/or response bodies.

Note that the clientCorrelator is used for purposes of error recovery as specified in section 5.6.1 of [REST_TS_Common], and internal client purposes. The server is NOT REQUIRED to use the clientCorrelator value in any form in the creation of the URL of the resource. Section 5.6.1 of [REST_TS_Common] provides a recommendation regarding the generation of the value of this field.

### 5.2.6 Type: AmountReservationTransaction

Transaction for reserve or release amount

<table>
<thead>
<tr>
<th>Element</th>
<th>Type</th>
<th>Optional</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>endUserId</td>

<td>xsd:decimal</td>
<td>Yes</td>
<td>The amount which has been reserved</td>
</tr>
<tr>
<td>chargingMetaData</td>
<td>ChargingMetaData</td>
<td>Yes</td>
<td>Metadata about the charging, such as e.g. information about the merchant, the product, taxation, etc</td>
</tr>
</tbody>
</table>

A root element named paymentAmount of type PaymentAmount is allowed in request and/or response bodies.

5.2.9 Type: PaymentVolume

Volume amount specific information

<table>
<thead>
<tr>
<th>Element</th>
<th>Type</th>
<th>Optional</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>billingText</td>
<td>xsd:string</td>
<td>No</td>
<td>Textual information to appear on the bill</td>
</tr>
<tr>
<td>volume</td>
<td>xsd:decimal</td>
<td>No</td>
<td>The volume to be charged</td>
</tr>
</tbody>
</table>
| ratingParameter  | RatingParameter        | Yes      | Parameters to use when performing rating ("unit", "contract", "service", "operation", etc). There is a maximum of one instance of each parameter type. Example, for the request "reserve 5 minutes of the gold video service", the volume part value is 5 and the parameters part has the following properties:  
<p>|                  | [0..unbounded]         |          | • &quot;unit&quot;=minutes               |
|                  |                        |          | • &quot;contract&quot;=gold              |
|                  |                        |          | • &quot;service&quot;=video              |
| totalVolumeCharged| xsd:decimal            | Yes      | The total volume which has been charged                                    |</p>
<table>
<thead>
<tr>
<th>Element</th>
<th>Type</th>
<th>Optional</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>totalVolumeRefunded</td>
<td>xsd:decimal</td>
<td>Yes</td>
<td>The total volume which has been refunded</td>
</tr>
<tr>
<td>volumeReserved</td>
<td>xsd:decimal</td>
<td>Yes</td>
<td>The volume which has been reserved</td>
</tr>
<tr>
<td>chargingMetaData</td>
<td>ChargingMetaData</td>
<td>Yes</td>
<td>Metadata about the charging, such as e.g. information about the merchant, the product, taxation, etc</td>
</tr>
</tbody>
</table>

### 5.2.10 Type: ChargingMetaData

Information about charging data

<table>
<thead>
<tr>
<th>Element</th>
<th>Type</th>
<th>Optional</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>onBehalfOf</td>
<td>xsd:string</td>
<td>Yes</td>
<td>String parameter to allow aggregator or acquiring partners to specify who the payment is really by. This provides visibility to the true merchant in an aggregation scenario and is key in dealing with customer queries where an aggregator submits requests on behalf of another entity.</td>
</tr>
<tr>
<td>purchaseCategoryCode</td>
<td>xsd:string</td>
<td>Yes</td>
<td>A category defining the type of service, product or media being purchased. A standard list of category codes would be helpful together with the ability to extend as required. This provides multiple uses including correct taxation, service blocking and service based spending limits.</td>
</tr>
<tr>
<td>channel</td>
<td>xsd:string</td>
<td>Yes</td>
<td>The channel over which the requester is interacting with the merchant, based on a pre-defined list of channels (e.g. WAP, Web, SMS...) with the ability to extend the channel list as required. This is useful if the operator needs to interact with the subscriber to authorise the charge (advice of charge) and provides details on how such interaction should be done. Schemes such as PayForIt in the UK show the value in centrally controlled Advice Of Charge and the channel is an important data element.</td>
</tr>
<tr>
<td>taxAmount</td>
<td>xsd:decimal</td>
<td>Yes</td>
<td>The tax amount charged by the merchant if the charge has tax already included. This also provides an indicator to the downstream billing system. It is important to know if the amount submitted has been pre taxed so the subscribers do not get double taxed on their bill.</td>
</tr>
<tr>
<td>mandateId</td>
<td>xsd:string</td>
<td>Yes</td>
<td>The ID representing the subscription service or consent approval for which this charge applies. Allows operators to track charges and group them based on the subscription service which they belong to. Also allows operators to block subscription payments if they have been requested to by the subscriber. For one off purchases, it allows the separate gathering of user consent and provides non repudiation for purchases.</td>
</tr>
<tr>
<td>serviceId</td>
<td>xsd:string</td>
<td>Yes</td>
<td>The ID of the partner/merchant service being purchased. This field could contain (for example) the short code of the service or an internal partner service ID and will allow the purchase to be tied directly back to their service catalog. This will be especially important in the US carriers to track...</td>
</tr>
<tr>
<td>productId</td>
<td>xsd:string</td>
<td>Yes</td>
<td>Combines with the service ID to uniquely indentify the product being purchased. For example if the service ID relates to a music service, the product ID can specify the song. If service ID relates to a short code, the product ID can specify the service on that short code (where multiple services are running on the same short code). This provides an additional layer of visibility to the operator and subscriber and allows for detailed reporting.</td>
</tr>
</tbody>
</table>

5.2.11 **Type: EndUserShare**

Information for splitting charges between accounts

<table>
<thead>
<tr>
<th>Element</th>
<th>Type</th>
<th>Optional</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>endUserId</td>
<td>xsd:anyURI</td>
<td>No</td>
<td>The end user's account to be charged. If endUserId is also part of the request URL, the two MUST have the same value.</td>
</tr>
<tr>
<td>percent</td>
<td>xsd: integer</td>
<td>No</td>
<td>The percentage of this end user's share. The sum of all shares must equal 100. The value of percentage should be positive.</td>
</tr>
</tbody>
</table>

5.2.12 **Type: RatingParameter**

Rating information for volume payment

<table>
<thead>
<tr>
<th>Element</th>
<th>Type</th>
<th>Optional</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>xsd:string</td>
<td>No</td>
<td>Free string (e.g.: “unit”, “contract”, “service”, “operation”, etc)</td>
</tr>
<tr>
<td>value</td>
<td>xsd:string</td>
<td>No</td>
<td>Value of the rating parameter (e.g. “minutes” for “unit”, “gold” for “contract”, “video” for “service”, etc)</td>
</tr>
</tbody>
</table>

5.2.13 **Enumeration: TransactionOperationStatus**

Enumeration of supported status resulting from transaction operations

<table>
<thead>
<tr>
<th>Enumeration</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Charged</td>
<td>In the request: charge the amount or volume.</td>
</tr>
<tr>
<td></td>
<td>In the response: The amount or volume has been charged</td>
</tr>
<tr>
<td>Refunded</td>
<td>In the request: refund the amount or volume.</td>
</tr>
<tr>
<td></td>
<td>In the response: The amount or volume has been refunded</td>
</tr>
<tr>
<td>Reserved</td>
<td>In the request: reserve the amount or volume.</td>
</tr>
<tr>
<td></td>
<td>In the response: The amount or volume has been reserved</td>
</tr>
<tr>
<td>Released</td>
<td>In the request: release the reservation. In the response: The reservation is released (implicitly by expiration or explicitly by release operation)</td>
</tr>
<tr>
<td>--------------------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Denied</td>
<td>This value only occurs in responses to a GET operation and means that the operation has been denied by the back-end payment server because of an issue with the user’s account (e.g. insufficient balance, potential fraud flag on the user’s account)</td>
</tr>
<tr>
<td>Refused</td>
<td>This value only occurs in responses to a GET operation and means that the operation has been refused (i.e. rejected by end user)</td>
</tr>
</tbody>
</table>

TransactionOperationStatus values in the request body represent the desired successful outcome of the operation. In the response it represents the status of this operation.

TransactionOperationStatus represents the final status of an operation of a transaction on the Server side, as it is stored in the resource representation on the server.

An operation can be denied or refused, i.e. the transaction has been unsuccessful. In such a case the Server SHALL return an HTTP 400 Bad Request status and a RequestError data structure, with an indication of a ServiceException SVC0270 (Charge failed), or either PolicyException POL0252 (Refund request failed) or POL0253 (Payment operation refused by user) as answer to the POST request. The RequestError body MAY include a link to the previously created resource. The resource SHALL be updated to reflect the correct transactionOperationStatus (denied or refused), that can be retrieved using a GET operation on the resource indicated by the link.

### 5.2.14 Values of the Link “rel” attribute

The “rel” attribute of the Link element is a free string set by the server implementation, to indicate a relationship between the current resource and an external resource. The following are possible strings (list is non-exhaustive, and can be extended):

- PaymentTransactionList
- AmountTransaction
- AmountSplitTransaction
- AmountReservationTransaction
- VolumeTransaction
- VolumeSplitTransaction
- VolumeReservationTransaction
- PaymentAmount

These values indicate the kind of resource that the link points to.

### 5.3 Sequence diagrams

#### 5.3.1 Amount charge and refund transaction

This figure below shows a scenario to create an amount charge or refund transaction for an end user.

The resource:

- To create an amount charge or refund transaction, create new resource under
  
  http://{serverRoot}/{apiVersion}/payment/{endUserId}/transactions/amount
 Outline of flow:

1. An application asks for the creation of a new amount charge or refund transaction for an end user using \texttt{POST} and receives the response with a resource URL containing the transactionId.

### 5.3.2 Amount split charge transaction

This figure below shows a scenario to create an amount split charge transaction for an end user.

The resource:

- To create an amount split charge transaction for an end user, create new resource under

\[
\text{http://[serverRoot]/[apiVersion]/payment/[endUserId]/transactions/amountSplit}
\]
1. An application asks for the creation of new amount split charge transaction for an end user using POST and receives the response with a resource URL containing the transactionId.

5.3.3 Volume charge and refund transaction

This figure below shows a scenario to create a volume charge or refund transaction for an end user.

The resource:
- To create a volume charge or refund transaction for an end user, create new resource under
  
  http://{serverRoot}/{apiVersion}/payment/{endUserId}/transactions/volume

![Diagram of volume charge and refund transaction](image)

Figure 4 Volume charge and refund transaction

Outline of flow:

1. An application asks for creation of new volume charge or refund transaction for an end user using POST and receives the response with a resource URL containing the transactionId.

5.3.4 Volume split charge transaction

This figure below shows a scenario to create a volume split charge transaction for an end user.

The resource and operation used
- To create a volume split charge transaction for an end user, create new resource under
  
  http://{serverRoot}/{apiVersion}/payment/{endUserId}/transactions/volumeSplit
Outline of flow:

1. An application asks for creation of new volume split charge transaction for an end user using **POST** and receives the response with a resource URL containing the transactionId.

### 5.3.5 Amount reservation transaction

This figure below shows a scenario to create, to charge and to release an amount reservation transaction for an end user.

The resources:

- To create an amount reservation transaction for an end user, create new resource under
  
  http://{serverRoot}/{apiVersion}/payment/{endUserId}/transactions/amountReservation

- To update an amount reservation transaction for an end user, use resource
  
  http://{serverRoot}/{apiVersion}/payment/{endUserId}/transactions/amountReservation/{transactionId}
Outline of flow:

1. Application creates a new amount reservation transaction for an end user. (POST)
2. Application charges an amount reservation with transactionId. (POST)
3. In case that add to the existing amount reservation, application reserves an additional amount reservation with transactionId. (POST)
4. Application charges an amount reservation with transactionId. (POST)
5. Application releases an amount reservation transaction for an end user. (POST)

5.3.6 Volume reservation transaction

This figure below shows a scenario to create, to charge and to release a volume reservation transaction for an end user.
The resource:
- To create a volume reservation transaction for an end user, create new resource under
  \[http://{serverRoot}/{apiVersion}/payment/{endUserId}/transactions/volumeReservation\]
- To update a volume reservation transaction for an end user, use resource
  \[http://{serverRoot}/{apiVersion}/payment/{endUserId}/transactions/volumeReservation/{transactionId}\]

Outline of flow:
1. Application creates a new volume reservation transaction for an end user. (POST)
2. Application charges a volume reservation with transactionId. (POST)
3. POST (“reserved”): reserve additional volume reservation with transactionId
   Response (“reserved”)
4. POST (“charged”): charge volume reservation with transactionId
   Response (“charged”)
5. POST (“released”): release volume reservation with transactionId
   Response (“released”)

Figure 7 Volume reservation transaction
3. In case that add to the existing volume reservation, application reserves an additional volume reservation with transactionId. (POST)

4. Application charges a volume reservation with transactionId. (POST)

5. Application releases a volume reservation transaction for an end user. (POST)

### 5.3.7 Amount converted from volume transaction

This figure below shows a scenario to provide access to amount converted from given volume.

The resource (illustrated with optional URL parameters) and operation used

- To get the amount for a given volume use the resource below with mandatory URL parameter “volume” and applicable optional URL parameters (e.g. “unit”, “contract”, “service”, “operation”)

  \[\text{http://}\{\text{serverRoot}\}/\{\text{apiVersion}\}/\text{payment/}\{\text{endUserId}\}/\text{convertedVolume/paymentAmount}\]

![Diagram](image)

**Figure 8 Amount converted from volume transaction**

Outline of flow:

1. An application requests the amount resulting from converting the given volume for an end user and receives the amount information.

### 5.4 Resource: All payment transactions for an end user

The resource used is: \[\text{http://}\{\text{serverRoot}\}/\{\text{apiVersion}\}/\text{payment/}\{\text{endUserId}\}/\text{transactions}\]

The endUserId must be percent-encoded according to [RFC3986].

This resource is used to provide access all completed and pending transactions (amount, volume, amount reservation and volume reservation) for an end user.
5.4.1 Request URI variables

The following request URI variables are common for all HTTP commands:

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>serverRoot</td>
<td>server base url: hostname+port+base path. Example: <a href="http://example.com/exampleAPI">http://example.com/exampleAPI</a></td>
</tr>
<tr>
<td>apiVersion</td>
<td>version of the ParlayREST API client wants to use (e.g. 1 for version 1.x)</td>
</tr>
<tr>
<td>endUserId</td>
<td>the end user's account (xsd:anyURI)</td>
</tr>
</tbody>
</table>

5.4.2 Response Codes

5.4.2.1 HTTP Response Codes

For HTTP response codes, see [OMA_REST_TS_Common].

5.4.2.2 Exception fault codes

For Policy Exception and Service Exception fault codes applicable to Payment, see [3GPP 29.199-6] and section 6 of the present document.

5.4.3 GET

This operation is used to obtain all completed and pending payment transactions (amount, volume, amount reservation and volume reservation) for an end user.

5.4.3.1 Example 1: get all transactions (Informative)

5.4.3.1.1 Request

GET /exampleAPI/1/payment/tel%3A%2B1-555-555-0100/transactions HTTP/1.1
Accept: application/xml
Host: example.com

5.4.3.1.2 Response

HTTP/1.1 200 OK
Content-Type: application/xml
Content-Length: nnnn
Date: Thu, 04 Jun 2009 02:51:59 GMT

5.4.3.2 Example 2: request with invalid (non-existing) endUserId (Informative)

5.4.3.2.1 Request

GET /exampleAPI/1/payment/tel%3A%2B1-555-555-0100/transactions HTTP/1.1
Accept: application/xml
Host: example.com
5.4.3.2.2 Response

HTTP/1.1 404 Not Found
Content-Type: application/xml
Content-Length: nnnn
Date: Thu, 04 Jun 2009 02:51:59 GMT

<?xml version="1.0" encoding="UTF-8"?>
<common:requestError xmlns:common="urn:oma:xml:rest:common:1">
  <link rel="PaymentTransactionList" href="http://example.com/exampleAPI/1/payment/tel%3A%2B1-555-555-0100/transactions"/>
  <serviceException><messageId>SVC0004</messageId><text>No valid addresses provided in message part %1</text><variables>endUserId=tel:+1-555-555-0100</variables></serviceException>
</common:requestError>

5.4.4 PUT

Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: GET’ field in the response as per section 14.7 of [RFC 2616].

5.4.5 POST

Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: GET’ field in the response as per section 14.7 of [RFC 2616].

5.4.6 DELETE

Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: GET’ field in the response as per section 14.7 of [RFC 2616].

5.5 Resource: All amount charge and refund transactions for an end user

The resource used is: http://{serverRoot}/{apiVersion}/payment/{endUserId}/transactions/amount

The endUserId must be percent-encoded according to [RFC3986].

This resource is used to provide access to all the amount charge and refund transactions for an end user.

5.5.1 Request URI variables

The following request URI variables are common for all HTTP commands:

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>serverRoot</td>
<td>server base url: hostname+port+base path. Example: <a href="http://example.com/exampleAPI">http://example.com/exampleAPI</a></td>
</tr>
<tr>
<td>apiVersion</td>
<td>version of the ParlayREST API client wants to use (e.g. 1 for version 1.x)</td>
</tr>
<tr>
<td>endUserId</td>
<td>the end user's account (xsd:anyURI)</td>
</tr>
</tbody>
</table>
5.5.2 Response Codes

5.5.2.1 HTTP Response Codes
For HTTP response codes, see [OMA_REST_TS_Common].

5.5.2.2 Exception fault codes
For Policy Exception and Service Exception fault codes applicable to Payment, see [3GPP 29.199-6] and section 6 of the present document.

5.5.3 GET
This operation is used to obtain all amount charge and refund transactions for an end user.

5.5.3.1 Example: get all amount transactions (Informative)

5.5.3.1.1 Request
GET /exampleAPI/1/payment/tel%3A%2B1-555-555-0100/transactions/amount HTTP/1.1
Accept: application/xml
Host: example.com

5.5.3.1.2 Response
HTTP/1.1 200 OK
Content-Type: application/xml
Content-Length: nnnn
Date: Thu, 04 Jun 2009 02:51:59 GMT

<?xml version="1.0" encoding="UTF-8"?>
<payment:paymentTransactionList xmlns:payment="urn:oma:xml:rest:payment:1">
  <!-- COMPLETED AMOUNT CHARGE TRANSACTION -->
  <amountTransaction>
    <endUserId>tel:+1-555-555-0100</endUserId>
    <paymentAmount>
      <chargingInformation>
        <description>Test amount transaction "Charged"</description>
        <currency>USD</currency>
        <amount>10</amount>
        <code>TEST-012345</code>
      </chargingInformation>
      <totalAmountCharged>10</totalAmountCharged>
    </paymentAmount>
    <transactionOperationStatus>Charged</transactionOperationStatus>
    <referenceCode>REF-12345</referenceCode>
    <serverReferenceCode>ABC-123</serverReferenceCode>
    <clientCorrelator>54321</clientCorrelator>
    <resourceURL>http://example.com/exampleAPI/1/payment/tel%3A%2B1-555-555-0100/transactions/amount/trans123</resourceURL>
  </amountTransaction>
  <!-- COMPLETED AMOUNT CHARGE TRANSACTION - ACRed end user id--> 
  <amountTransaction>
    <endUserId>tel:+1-555-555-0100</endUserId>
    <paymentAmount>
      <chargingInformation>
        <description>Test amount transaction "Charged"</description>
        <currency>USD</currency>
        <amount>10</amount>
        <code>TEST-012345</code>
      </chargingInformation>
      <totalAmountCharged>10</totalAmountCharged>
    </paymentAmount>
    <transactionOperationStatus>Charged</transactionOperationStatus>
    <referenceCode>REF-12345</referenceCode>
    <serverReferenceCode>ABC-123</serverReferenceCode>
    <clientCorrelator>54321</clientCorrelator>
    <resourceURL>http://example.com/exampleAPI/1/payment/tel%3A%2B1-555-555-0100/transactions/amount/trans123</resourceURL>
  </amountTransaction>
</payment:paymentTransactionList>
5.5.4 PUT

Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: GET, POST’ field in the response as per section 14.7 of [RFC 2616].

5.5.5 POST

This operation is used to create a new transaction for an end user.

5.5.5.1 Example 1: create charge amount (Informative)

5.5.5.1.1 Request

POST /exampleAPI/1/payment/tel%3A%2B1-555-555-0100/transactions/amount HTTP/1.1
Accept: application/xml
Host: example.com
Content-Type: application/xml
Content-Length: nnnn

<?xml version="1.0" encoding="UTF-8"?>
<!-- AMOUNT CHARGE TRANSACTION -->
<payment:amountTransaction xmlns:payment="urn:oma:xml:rest:payment:1">
  <endUserId>tel:+1-555-555-0100</endUserId>
  <paymentAmount>
    <chargingInformation>
      <description>Test amount transaction "Charged"</description>
      <currency>USD</currency>
      <amount>10</amount>
      <code>TEST-012345</code>
    </chargingInformation>
    <totalAmountCharged>10</totalAmountCharged>
  </paymentAmount>
  <transactionOperationStatus>Charged</transactionOperationStatus>
  <referenceCode>REF-12345</referenceCode>
  <serverReferenceCode>ABC-123</serverReferenceCode>
  <resourceURL>http://example.com/exampleAPI/1/payment/tel%3A%2B1-555-555-0100/transactions/amount/trans123</resourceURL>
</payment:amountTransaction>

5.5.5.2 Example 2: create refund amount (Informative)

5.5.5.2.1 Request

POST /exampleAPI/1/payment/tel%3A%2B1-555-555-0100/transactions/amount HTTP/1.1
Accept: application/xml
Host: example.com
5.5.5.2.2 Response

HTTP/1.1 201 Created
Content-Type: application/xml
Content-Length: nnnn
Date: Thu, 04 Jun 2009 02:51:59 GMT
Location: http://example.com/exampleAPI/1/payment/tel%3A%2B1-555-555-0100/transactions/amount/trans130

<?xml version="1.0" encoding="UTF-8"?>
<!- - AMOUNT REFUND TRANSACTION -->
<payment:amountTransaction xmlns:payment="urn:oma:xml:rest:payment:1">

    <resourceURL>http://example.com/exampleAPI/1/payment/tel%3A%2B1-555-555-0100/transactions/amount/trans123</resourceURL>
5.5.5.4 Example 4: unsuccessful charge request because of denial/refusal by back-end system (Informative)

This example illustrates the case where a resource will not be created, because of denial or refusal by back-end system.

5.5.5.4.1 Request

POST /exampleAPI/1/payment/tel%3A%2B1-555-555-0100/transactions/amount HTTP/1.1
Accept: application/xml
Host: example.com
Content-Type: application/xml
Content-Length: nnnn

```xml
<?xml version="1.0" encoding="UTF-8"?>
<!-- AMOUNT CHARGE TRANSACTION -->
<payment:amountTransaction xmlns:payment="urn:oma:xml:rest:payment:1">
  <endUserId>tel:+1-555-555-0100</endUserId>
  <paymentAmount>
    <chargingInformation>
      <description>Test amount transaction "Charged" </description>
      <currency>USD</currency>
      <amount>10</amount>
      <code>TEST-012345</code>
    </chargingInformation>
    <transactionOperationStatus>Charged</transactionOperationStatus>
    <referenceCode>REF-12345</referenceCode>
    <clientCorrelator>54321</clientCorrelator>
  </paymentAmount>
</payment:amountTransaction>
```

5.5.5.4.2 Response

HTTP/1.1 400 Bad Request
Content-Type: application/xml
Content-Length: nnnn
Date: Thu, 04 Jun 2009 02:51:59 GMT

```xml
<?xml version="1.0" encoding="UTF-8"?>
<common:requestError xmlns:common="/urn:oma:xml:rest:common:1">
  <serviceException>
    <messageId>SVC0270</messageId>
    <text>Charging operation failed, the charge was not applied.</text>
  </serviceException>
</common:requestError>
```

5.5.6 DELETE

Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: GET, POST’ field in the response as per section 14.7 of [RFC 2616].
5.6 Resource: All amount split charge transactions for an end user

The resource used is:

http://{serverRoot}/{apiVersion}/payment/{endUserId}/transactions/amountSplit

The endUserId must be percent-encoded according to [RFC3986].

This resource is used to provide access to all the amount split charge transactions for an end user.

5.6.1 Request URI variables

The following request URI variables are common for all HTTP commands:

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>serverRoot</td>
<td>server base url: hostname+port+base path. Example: <a href="http://example.com/exampleAPI">http://example.com/exampleAPI</a></td>
</tr>
<tr>
<td>apiVersion</td>
<td>version of the ParlayREST API client wants to use (e.g. 1 for version 1.x)</td>
</tr>
<tr>
<td>endUserId</td>
<td>the end user's account (xsd:anyURI)</td>
</tr>
</tbody>
</table>

5.6.2 Response Codes

5.6.2.1 HTTP Response Codes

For HTTP response codes, see [OMA_REST_TS_Common].

5.6.2.2 Exception fault codes

For Policy Exception and Service Exception fault codes applicable to Payment, see [3GPP 29.199-6] and section 6 of the present document.

5.6.3 GET

This operation is used to obtain all amount split charge transactions for an end user.

5.6.3.1 Example: get all amount split transactions (Informative)

5.6.3.1.1 Request

GET /exampleAPI/1/payment/tel%3A%2B1-555-555-0100/transactions/amountSplit HTTP/1.1
Accept: application/xml
Host: example.com

5.6.3.1.2 Response

HTTP/1.1 200 OK
Content-Type: application/xml
Content-Length: nnnn
<?xml version="1.0" encoding="UTF-8"?>
<payment:paymentTransactionList xmlns:payment="urn:oma:xml:rest:payment:1">
    <!-- COMPLETED AMOUNT SPLIT CHARGE TRANSACTION -->

                <code>TEST-012346</code>
            </chargingInformation>
            <totalAmountCharged>10</totalAmountCharged>
        </paymentAmount>
        <transactionOperationStatus>Charged</transactionOperationStatus>
        <referenceCode>REF-12346</referenceCode>
        <serverReferenceCode>DEF-123</serverReferenceCode>
        <clientCorrelator>55553</clientCorrelator>
        <resourceURL>http://example.com/exampleAPI/1/payment/tel%3A%2B1-555-555-0100/transactions/amountSplit/trans124</resourceURL>
    </amountSplitTransaction>
</payment:paymentTransactionList>
5.6.4 PUT

Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: GET, POST’ field in the response as per section 14.7 of [RFC 2616].

5.6.5 POST

This operation is used to create a new transaction for an end user.

5.6.5.1 Example: create split charge amount (Informative)

5.6.5.1.1 Request

POST /exampleAPI/1/payment/tel%3A%2B1-555-555-0100/transactions/amountSplit HTTP/1.1
Accept: application/xml
Host: example.com
Content-Type: application/xml
Content-Length: nnnn

<?xml version="1.0" encoding="UTF-8"?>
<!-- AMOUNT SPLIT CHARGE TRANSACTION -->
<amountSplitTransaction xmlns:payment="urn:oma:xml:rest:payment:1">
  <endUserShare>
    <endUserId>tel:+1-555-555-0100</endUserId>
    <percent>30</percent>
  </endUserShare>
  <endUserShare>
    <endUserId>tel:+1-555-555-0101</endUserId>
    <percent>70</percent>

    </chargingInformation>
  </paymentAmount>
  <transactionOperationStatus>Charged</transactionOperationStatus>
  <referenceCode>REF-12345</referenceCode>
  <clientCorrelator>54431</clientCorrelator>
</amountSplitTransaction>

5.6.5.1.2 Response

HTTP/1.1 201 Created
Content-Type: application/xml
Content-Length: nnnn
Date: Thu, 04 Jun 2009 02:51:59 GMT
5.6.6 DELETE

Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: GET, POST’ field in the response as per section 14.7 of [RFC 2616].

5.7 Resource: Individual amount charge or refund transaction for an end user

The resource used is:

http://{serverRoot}/apiVersion/payment/{endUserId}/transactions/amount/{transactionId}

The endUserId must be percent-encoded according to [RFC3986].

This resource is used to provide access to an individual amount charge or refund transaction for an end user.
5.7.1 Request URI variables

The following request URI variables are common for all HTTP commands:

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>serverRoot</td>
<td>server base url: hostname+port+base path. Example: <a href="http://example.com/exampleAPI">http://example.com/exampleAPI</a></td>
</tr>
<tr>
<td>apiVersion</td>
<td>version of the ParlayREST API client wants to use (e.g. 1 for version 1.x)</td>
</tr>
<tr>
<td>endUserId</td>
<td>the end user's account (xsd:anyURI)</td>
</tr>
<tr>
<td>transactionId</td>
<td>unique transaction identifier</td>
</tr>
</tbody>
</table>

5.7.2 Response Codes

5.7.2.1 HTTP Response Codes

For HTTP response codes, see [OMA_REST_TS_Common].

5.7.2.2 Exception fault codes

For Policy Exception and Service Exception fault codes applicable to Payment, see [3GPP 29.199-6] and section 6 of the present document.

5.7.3 GET

This operation is used to return individual completed or pending amount charge and refund transaction information for an end user.

5.7.3.1 Example: get amount charge  (Informative)

This example shows also an alternative way to indicate desired content type in response from the server, by using URL query parameter “?resFormat” which is described in [OMA_REST_TS_Common]. Note: this example also illustrates how to indicate in the request the expected response body format.

5.7.3.1.1 Request

```
GET /exampleAPI/1/payment/tel%3A%2B1-555-555-0100/transactions/amount/trans123?resFormat=XML HTTP/1.1
Host: example.com
```

5.7.3.1.2 Response

```
HTTP/1.1 200 OK
Content-Type: application/xml
Content-Length: nnnn
Date: Thu, 04 Jun 2009 02:51:59 GMT
<?xml version="1.0" encoding="UTF-8"?>
 <!-- AMOUNT CHARGE TRANSACTION -->
 <payment:amountTransaction xmlns:payment="urn:oma:xml:rest:payment:1">
   <endUserId>tel:+1-555-555-0100</endUserId>
   <paymentAmount>
     <chargingInformation>
```

© 2012 Open Mobile Alliance Ltd. All Rights Reserved.
Used with the permission of the Open Mobile Alliance Ltd. under the terms as stated in this document
5.7.4 PUT

Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: GET’ field in the response as per section 14.7 of [RFC 2616].

5.7.5 POST

Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: GET’ field in the response as per section 14.7 of [RFC 2616].

5.7.6 DELETE

Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: GET’ field in the response as per section 14.7 of [RFC 2616].

5.8 Resource: Individual amount split charge transaction for an end user

The resource used is: http://{serverRoot}/{apiVersion}/payment/{endUserId}/transactions/amountSplit/{transactionId}

The endUserId must be percent-encoded according to [RFC3986].

This resource is used to provide access to an individual amount split charge transaction for an end user.

5.8.1 Request URI variables

The following request URI variables are common for all HTTP commands:

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>serverRoot</td>
<td>server base url: hostname+port+base path. Example: <a href="http://example.com/exampleAPI">http://example.com/exampleAPI</a></td>
</tr>
<tr>
<td>apiVersion</td>
<td>version of the ParlayREST API client wants to use (e.g. 1 for version 1.x)</td>
</tr>
<tr>
<td>endUserId</td>
<td>the end user’s account (xsd:anyURI)</td>
</tr>
<tr>
<td>transactionId</td>
<td>unique transaction identifier</td>
</tr>
</tbody>
</table>
5.8.2 Response Codes

5.8.2.1 HTTP Response Codes
For HTTP response codes, see [OMA_REST_TS_Common].

5.8.2.2 Exception fault codes
For Policy Exception and Service Exception fault codes applicable to Payment, see [3GPP 29.199-6] and section 6 of the present document.

5.8.3 GET

This operation is used to return individual completed or pending amount split charge transaction information for an end user.

5.8.3.1 Example: get amount split charge (Informative)

5.8.3.1.1 Request

GET /exampleAPI/1/payment/tel%3A%2B1-555-555-0100/transactions/amountSplit/trans123
HTTP/1.1
Accept: application/xml
Host: example.com

5.8.3.1.2 Response

HTTP/1.1 200 OK
Content-Type: application/xml
Content-Length: nnnn
Date: Thu, 04 Jun 2009 02:51:59 GMT

<resourceURL>http://example.com/exampleAPI/1/payment/tel%3A%2B1-555-555-0100/transactions/amountSplit/trans123</resourceURL>
</payment:amountSplitTransaction>

5.8.4 PUT

Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: GET’ field in the response as per section 14.7 of [RFC 2616].

5.8.5 POST

Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: GET’ field in the response as per section 14.7 of [RFC 2616].

5.8.6 DELETE

Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: GET’ field in the response as per section 14.7 of [RFC 2616].

5.9 Resource: All volume charge and refund transactions for an end user

The resource used is: http://{serverRoot}/{apiVersion}/payment/{endUserId}/transactions/volume

The endUserId must be percent-encoded according to [RFC3986].

This resource is used to provide access to all the volume charge and refund transactions for an end user.

5.9.1 Request URI variables

The following request URI variables are common for all HTTP commands:

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>serverRoot</td>
<td>server base url: hostname+port+base path. Example: <a href="http://example.com/exampleAPI">http://example.com/exampleAPI</a></td>
</tr>
<tr>
<td>apiVersion</td>
<td>version of the ParlayREST API client wants to use (e.g. 1 for version 1.x)</td>
</tr>
<tr>
<td>endUserId</td>
<td>the end user's account (xsd:anyURI)</td>
</tr>
</tbody>
</table>

5.9.2 Response Codes

5.9.2.1 HTTP Response Codes

For HTTP response codes, see [OMA_REST_TS_Common].

5.9.2.2 Exception fault codes

For Policy Exception and Service Exception fault codes applicable to Payment, see [3GPP 29.199-6] and section 6 of the present document.
5.9.3 GET

This operation is used to obtain all volume charge and refund transactions for an end user.

5.9.3.1 Example: get all volume charge and refund transactions (Informative)

5.9.3.1.1 Request

GET /exampleAPI/1/payment/tel%3A%2B1-555-555-0100/transactions/volume HTTP/1.1
Accept: application/xml
Host: example.com

5.9.3.1.2 Response

HTTP/1.1 200 OK
Content-Type: application/xml
Content-Length: nnnn
Date: Thu, 04 Jun 2009 02:51:59 GMT

<?xml version="1.0" encoding="UTF-8"?>
<payment:paymentTransactionList xmlns:payment="urn:oma:xml:rest:payment:1">
    <!-- COMPLETED VOLUME CHARGE TRANSACTION -->

    </paymentVolume>
</payment:volumeTransaction>
5.9.6 DELETE
Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: GET, POST’ field in the response as per section 14.7 of [RFC 2616].

5.10 Resource: All volume split charge transactions for an end user

The resource used is: http://{serverRoot}/{apiVersion}/payment/{endUserId}/transactions/volumeSplit

The endUserId must be percent-encoded according to [RFC3986].

This resource is used to provide access to all the volume split charge transactions for an end user.

5.10.1 Request URI variables

The following request URI variables are common for all HTTP commands:

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>serverRoot</td>
<td>server base url: hostname+port+base path. Example: <a href="http://example.com/exampleAPI">http://example.com/exampleAPI</a></td>
</tr>
<tr>
<td>apiVersion</td>
<td>version of the ParlayREST API client wants to use (e.g. 1 for version 1.x)</td>
</tr>
<tr>
<td>endUserId</td>
<td>the end user's account (xsd:anyURI)</td>
</tr>
</tbody>
</table>

5.10.2 Response Codes

5.10.2.1 HTTP Response Codes
For HTTP response codes, see [OMA_REST_TS_Common].

5.10.2.2 Exception fault codes
For Policy Exception and Service Exception fault codes applicable to Payment, see [3GPP 29.199-6] and section 6 of the present document.
5.10.3 GET

This operation is used to obtain all volume split charge transactions for an end user.

5.10.3.1 Example: get all volume split charge transactions (Informative)

5.10.3.1.1 Request

```
GET /exampleAPI/1/payment/tel%3A%2B1-555-555-0100/transactions/volumeSplit
HTTP/1.1
Accept: application/xml
Host: example.com
```

5.10.3.1.2 Response

```
HTTP/1.1 200 OK
Content-Type: application/xml
Content-Length: nnnn
Date: Thu, 04 Jun 2009 02:51:59 GMT

<?xml version="1.0" encoding="UTF-8"?>
<payment:paymentTransactionList xmlns:payment="urn:oma:xml:rest:payment:1">
  <volumeSplitTransaction>
    <endUserShare>

<tr>
<td>apiVersion</td>
<td>version of the ParlayREST API client wants to use (e.g. 1 for version 1.x)</td>
</tr>
<tr>
<td>endUserId</td>
<td>the end user’s account (xsd:anyURI)</td>
</tr>
<tr>
<td>transactionId</td>
<td>unique transaction identifier</td>
</tr>
</tbody>
</table>
5.11.2 Response Codes

5.11.2.1 HTTP Response Codes
For HTTP response codes, see [OMA_REST_TS_Common].

5.11.2.2 Exception fault codes
For Policy Exception and Service Exception fault codes applicable to Payment, see [3GPP 29.199-6] and section 6 of the present document.

5.11.3 GET
This operation is used to return individual completed or pending volume charge and refund transaction information for an end user.

5.11.3.1 Example: get volume charge (Informative)

5.11.3.1.1 Request

```
GET /exampleAPI/1/payment/tel%3A%2B1-555-555-0100/transactions/volume/trans123 HTTP/1.1
Accept: application/xml
Host: example.com
```

5.11.3.1.2 Response

```
HTTP/1.1 200 OK
Content-Type: application/xml
Content-Length: nnnn
Date: Thu, 04 Jun 2009 02:51:59 GMT

<?xml version="1.0" encoding="UTF-8"?>
<!-- VOLUME CHARGE TRANSACTION -->

<td>version of the ParlayREST API client wants to use (e.g. 1 for version 1.x)</td>
</tr>
<tr>
<td>endUserId</td>
<td>the end user’s account (xsd:anyURI)</td>
</tr>
<tr>
<td>transactionId</td>
<td>unique transaction identifier</td>
</tr>
</tbody>
</table>

5.12.2 Response Codes

5.12.2.1 HTTP Response Codes

For HTTP response codes, see [OMA_REST_TS_Common].

5.12.2.2 Exception fault codes

For Policy Exception and Service Exception fault codes applicable to Payment, see [3GPP 29.199-6] and section 6 of the present document.
5.12.3 GET

This operation is used to return individual completed or pending volume split charge transaction information for an end user.

5.12.3.1 Example: get volume split charge

5.12.3.1.1 Request

GET /exampleAPI/1/payment/tel%3A%2B1-555-555-0100/transactions/volumeSplit/trans123 HTTP/1.1
Accept: application/xml
Host: example.com

5.12.3.1.2 Response

HTTP/1.1 200 OK
Content-Type: application/xml
Content-Length: nnnn
Date: Thu, 04 Jun 2009 02:51:59 GMT

<?xml version="1.0" encoding="UTF-8"?>

<payment:volumeSplitTransaction xmlns:payment="urn:oma:xml:rest:payment:1">
    <endUserShare>
        <endUserId>tel:+1-555-555-0100</endUserId>
        <percent>20</percent>
    </endUserShare>
    <endUserShare>
        <endUserId>tel:+1-555-555-0101</endUserId>
        <percent>80</percent>

    <serverReferenceCode>ABC-123</serverReferenceCode>
    <clientCorrelator>55556</clientCorrelator>
    <resourceURL>http://example.com/exampleAPI/1/payment/tel%3A%2B1-555-555-0100/transactions/volumeSplit/trans123</resourceURL>
</payment:volumeSplitTransaction>

5.12.4 PUT

Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: GET’ field in the response as per section 14.7 of [RFC 2616].
5.12.5 POST

Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: GET’ field in the response as per section 14.7 of [RFC 2616].

5.12.6 DELETE

Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: GET’ field in the response as per section 14.7 of [RFC 2616].

5.13 Resource: Individual amount for volume charge or refund transaction for an end user

The resource used is:

http://{serverRoot}/{apiVersion}/payment/{endUserId}/transactions/volume/{transactionId}/paymentAmount

The endUserId must be percent-encoded according to [RFC3986].

This resource is used to provide access to an individual payment amount information based on provided volume transaction for an end user.

5.13.1 Request URI variables

The following request URI variables are common for all HTTP commands:

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>serverRoot</td>
<td>server base url: hostname+port+base path. Example: <a href="http://example.com/exampleAPI">http://example.com/exampleAPI</a></td>
</tr>
<tr>
<td>apiVersion</td>
<td>version of the ParlayREST API client wants to use (e.g. 1 for version 1.x)</td>
</tr>
<tr>
<td>endUserId</td>
<td>the end user's account (xsd:anyURI)</td>
</tr>
<tr>
<td>transactionId</td>
<td>unique transaction identifier</td>
</tr>
</tbody>
</table>

5.13.2 Response Codes

5.13.2.1 HTTP Response Codes

For HTTP response codes, see [OMA_REST_TS_Common].

5.13.2.2 Exception fault codes

For Policy Exception and Service Exception fault codes applicable to Payment, see [3GPP 29.199-6] and section 6 of the present document.

5.13.3 GET

This operation is used to return individual transaction payment information based on provided volume transaction for an end user.
5.13.3.1 Example: get amount for volume charge (Informative)

5.13.3.1.1 Request

GET /exampleAPI/1/payment/tel%3A%2B1-555-555-0100/volume/trans999/paymentAmount HTTP/1.1
Accept: application/xml
Host: example.com

5.13.3.1.2 Response

HTTP/1.1 200 OK
Content-Type: application/xml
Content-Length: nnnn
Date: Thu, 04 Jun 2009 02:51:59 GMT

<?xml version="1.0" encoding="UTF-8"?>
<payment:paymentAmount xmlns:payment="urn:oma:xml:rest:payment:1">
  <chargingInformation>
    <description>10 Minutes converted to USD for transaction=trans999 of endUserId=tel:+1-555-555-0100</description>
    <currency>USD</currency>
    <amount>10</amount>
  </chargingInformation>
</payment:paymentAmount>

5.13.4 PUT

Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: GET’ field in the response as per section 14.7 of [RFC 2616].

5.13.5 POST

Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: GET’ field in the response as per section 14.7 of [RFC 2616].

5.13.6 DELETE

Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: GET’ field in the response as per section 14.7 of [RFC 2616].

5.14 Resource: Individual amount for volume split charge transaction for an end user

The resource used is:

http://{serverRoot}/{apiVersion}/payment/{endUserId}/transactions/volumeSplit/{transactionId}/paymentAmount

The endUserId must be percent-encoded according to [RFC3986].

This resource is used to provide access to an individual payment amount information based on provided volume split transaction for an end user.
5.14.1 Request URI variables

The following request URI variables are common for all HTTP commands:

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>serverRoot</td>
<td>server base url: hostname+port+base path. Example: <a href="http://example.com/exampleAPI">http://example.com/exampleAPI</a></td>
</tr>
<tr>
<td>apiVersion</td>
<td>version of the ParlayREST API client wants to use (e.g. 1 for version 1.x)</td>
</tr>
<tr>
<td>endUserId</td>
<td>the end user's account (xsd:anyURI)</td>
</tr>
<tr>
<td>transactionId</td>
<td>unique transaction identifier</td>
</tr>
</tbody>
</table>

5.14.2 Response Codes

5.14.2.1 HTTP Response Codes

For HTTP response codes, see [OMA_REST_TS_Common].

5.14.2.2 Exception fault codes

For Policy Exception and Service Exception fault codes applicable to Payment, see [3GPP 29.199-6] and section 6 of the present document.

5.14.3 GET

This operation is used to return individual transaction payment information based on provided volume split transaction for an end user.

5.14.3.1 Example: get amount for volume split charge (Informative)

5.14.3.1.1 Request

GET /exampleAPI/1/payment/tel%3A%2B1-555-555-0100/transactions/volumeSplit/trans999/paymentAmount HTTP/1.1
Accept: application/xml
Host: example.com

5.14.3.1.2 Response

HTTP/1.1 200 OK
Content-Type: application/xml
Content-Length: nnnn
Date: Thu, 04 Jun 2009 02:51:59 GMT

<?xml version="1.0" encoding="UTF-8"?>
<payment:paymentAmount xmlns:payment="urn:oma:xml:rest:payment:1">
  <chargingInformation>
    <description>10 Minutes converted to USD for transaction=trans999</description>
    <currency>USD</currency>
    <amount>10</amount>
  </chargingInformation>
</payment:paymentAmount>
5.14.4 PUT
Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: GET’ field in the response as per section 14.7 of [RFC 2616].

5.14.5 POST
Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: GET’ field in the response as per section 14.7 of [RFC 2616].

5.14.6 DELETE
Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: GET’ field in the response as per section 14.7 of [RFC 2616].

5.15 Resource: All amount reservation transactions for an end user
The resource used is:
http://{serverRoot}/{apiVersion}/payment/{endUserId}/transactions/amountReservation
The endUserId must be percent-encoded according to [RFC3986].
This resource is used to provide access to all the completed and pending amount reservation transactions for an end user.

5.15.1 Request URI variables
The following request URI variables are common for all HTTP commands:

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>serverRoot</td>
<td>server base url: hostname+port+base path. Example: <a href="http://example.com/exampleAPI">http://example.com/exampleAPI</a></td>
</tr>
<tr>
<td>apiVersion</td>
<td>version of the ParlayREST API client wants to use (e.g. 1 for version 1.x)</td>
</tr>
<tr>
<td>endUserId</td>
<td>the end user’s account (xsd:anyURI)</td>
</tr>
</tbody>
</table>

5.15.2 Response Codes
5.15.2.1 HTTP Response Codes
For HTTP response codes, see [OMA_REST_TS_Common].

5.15.2.2 Exception fault codes
For Policy Exception and Service Exception fault codes applicable to Payment, see [3GPP 29.199-6] and section 6 of the present document.

5.15.3 GET
This operation is used to return all amount reservation transactions details and state for a given end user.
5.15.3.1 Example: get all amount reservation transactions  

5.15.3.1.1 Request

GET /exampleAPI/1/payment/tel%3A%2B1-555-555-0100/transactions/amountReservation HTTP/1.1
Accept: application/xml
Host: example.com

5.15.3.1.2 Response

HTTP/1.1 200 OK
Content-Type: application/xml
Content-Length: nnnn
Date: Thu, 04 Jun 2009 02:51:59 GMT

</payment:amountReservationTransaction>

5.15.6 DELETE
Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: GET, POST’ field in the response as per section 14.7 of [RFC 2616].

5.16 Resource: Individual amount reservation transaction for an end user

The resource used is:

http://{serverRoot}/{apiVersion}/payment/{endUserId}/transactions/amountReservation/{transactionId}

The endUserId must be percent-encoded according to [RFC3986].

This resource is used to provide access to an individual amount reservation transaction for an end user.

5.16.1 Request URI variables

The following request URI variables are common for all HTTP commands:

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>serverRoot</td>
<td>server base url: hostname+port+base path. Example:</td>
</tr>
<tr>
<td></td>
<td><a href="http://example.com/exampleAPI">http://example.com/exampleAPI</a></td>
</tr>
<tr>
<td>apiVersion</td>
<td>version of the ParlayREST API client wants to use (e.g. 1 for version 1.x)</td>
</tr>
<tr>
<td>endUserId</td>
<td>the end user's account (xsd:anyURI)</td>
</tr>
<tr>
<td>transactionId</td>
<td>unique transaction identifier</td>
</tr>
</tbody>
</table>

5.16.2 Response Codes

5.16.2.1 HTTP Response Codes

For HTTP response codes, see [OMA_REST_TS_Common].
5.16.2.2 Exception fault codes

For Policy Exception and Service Exception fault codes applicable to Payment, see [3GPP 29.199-6] and section 6 of the present document.

5.16.3 GET

This operation is used to return individual completed or pending amount reservation transaction information for an end user.

5.16.3.1 Example: get amount reservation (Informative)

5.16.3.1.1 Request

```
GET /exampleAPI/1/tel%3A%2B1-555-555-0100/transactions/amountReservation/trans999
HTTP/1.1
Accept: application/xml
Host: example.com
```

5.16.3.1.2 Response

```
HTTP/1.1 200 OK
Content-Type: application/xml
Content-Length: nnnn
Date: Thu, 04 Jun 2009 02:51:59 GMT

<?xml version="1.0" encoding="UTF-8"?>
<!-- PENDING AMOUNT RESERVATION TRANSACTION -->
<payment:amountReservationTransaction xmlns:payment="urn:oma:xml:rest:payment:1">
  <endUserId>tel:+1-555-555-0100</endUserId>
  <paymentAmount>
    <chargingInformation>
      <description>Test amount reservation transaction "Reserved"</description>
      <currency>USD</currency>
      <amount>10</amount>
      <code>TEST012345</code>
    </chargingInformation>
    <totalAmountCharged>0</totalAmountCharged>
    <amountReserved>10</amountReserved>
  </paymentAmount>
  <transactionOperationStatus>Reserved</transactionOperationStatus>
  <referenceSequence>1</referenceSequence>
  <clientCorrelator>55555</clientCorrelator>
  <resourceURL>http://example.com/exampleAPI/1/payment/tel%3A%2B1-555-555-0100/transactions/amountReservation/trans999</resourceURL>
</payment:amountReservationTransaction>
```

5.16.4 PUT

Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: GET, POST’ field in the response as per section 14.7 of [RFC 2616].
5.16.5 POST

This operation is used to change transaction operation state to “charged” or “released” or “reserved” for an amount reservation transaction for an end user.

5.16.5.1 Example 1: charge amount for amount reservation (informative)

This example assumes an initial reservation was made via referenceSequence 1 (POST request) and a charge against this reservation is requested via referenceSequence 2.

5.16.5.1.1 Request

```
POST /exampleAPI/1/payment/tel%3A%2B1-555-555-0100/transactions/amountReservation/trans999 HTTP/1.1
Accept: application/xml
Host: example.com
Content-Type: application/xml
Content-Length: nnnn

<?xml version="1.0" encoding="UTF-8"?>
<payment:amountReservationTransaction xmlns:payment="urn:oma:xml:rest:payment:1">
  <endUserId>tel:+1-555-555-0100</endUserId>
  <paymentAmount>
    <chargingInformation>
      <description>Test amount reservation transaction "Charged"</description>
      <currency>USD</currency>
      <amount>10</amount>
      <code>TEST012345</code>
    </chargingInformation>
    <totalAmountCharged>10</totalAmountCharged>
    <amountReserved>0</amountReserved>
  </paymentAmount>
  <transactionOperationStatus>Charged</transactionOperationStatus>
  <referenceSequence>2</referenceSequence>
  <referenceCode>REF-12345</referenceCode>
</payment:amountReservationTransaction>
```

5.16.5.1.2 Response

```
HTTP/1.1 200 OK
Content-Type: application/xml
Content-Length: nnnn
Date: Thu, 04 Jun 2009 02:51:59 GMT

<?xml version="1.0" encoding="UTF-8"?>
<payment:amountReservationTransaction xmlns:payment="urn:oma:xml:rest:payment:1">
  <endUserId>tel:+1-555-555-0100</endUserId>
  <paymentAmount>
    <chargingInformation>
      <description>Test amount reservation transaction "Charged"</description>
      <currency>USD</currency>
      <amount>10</amount>
      <code>TEST012345</code>
    </chargingInformation>
    <totalAmountCharged>10</totalAmountCharged>
    <amountReserved>0</amountReserved>
  </paymentAmount>
  <transactionOperationStatus>Charged</transactionOperationStatus>
  <referenceSequence>2</referenceSequence>
  <referenceCode>REF-12345</referenceCode>
</payment:amountReservationTransaction>
```
5.16.5.2 Example 2: repeat a charge request with same referenceSequence for an amount reservation transaction (Informative)

This example assumes an initial reservation was made via referenceSequence 1 (POST request) and a charge amount for amount reservation was made via referenceSequence 2, but while the 2\textsuperscript{nd} step succeeded on the Server side, the client did not receive the response from the server due to communication failure. The client is repeating the request, but the server will recognize the same referenceSequence as indication of a repeated request, and will not change the resource, instead just returning the same response as in the previous attempt.

5.16.5.2.1 Request

```
POST /exampleAPI/1/payment/tel%3A%2B1-555-555-0100/transactions/amountReservation/trans999 HTTP/1.1
Accept: application/xml
Host: example.com
Content-Type: application/xml
Content-Length: nnnn

<?xml version="1.0" encoding="UTF-8"?>
<payment:amountReservationTransaction xmlns:payment="urn:oma:xml:rest:payment:1">
  <endUserId>tel:+1-555-555-0100</endUserId>
  <paymentAmount>
    <chargingInformation>
      <description>Test amount reservation transaction "Charged"</description>
      <currency>USD</currency>
      <amount>10</amount>
      <code>TEST012345</code>
    </chargingInformation>
  </paymentAmount>
  <transactionOperationStatus>Charged</transactionOperationStatus>
  <referenceSequence>2</referenceSequence>
  <referenceCode>REF-12345</referenceCode>
</payment:amountReservationTransaction>
```

5.16.5.2.2 Response

```
HTTP/1.1 200 OK
Content-Type: application/xml
Content-Length: nnnn
Date: Thu, 04 Jun 2009 02:51:59 GMT

<?xml version="1.0" encoding="UTF-8"?>
<payment:amountReservationTransaction xmlns:payment="urn:oma:xml:rest:payment:1">
  <endUserId>tel:+1-555-555-0100</endUserId>
  <paymentAmount>
    <chargingInformation>
      <description>Test amount reservation transaction "Charged"</description>
    </chargingInformation>
  </paymentAmount>
</payment:amountReservationTransaction>
```
5.16.5.3 Example 3: release amount reservation (Informative)

This example assumes an initial reservation was made via referenceSequence 1 (POST request) and it is released via referenceSequence 2.

5.16.5.3.1 Request

POST /exampleAPI/1/payment/tel%3A%2B1-555-555-0100/transactions/amountReservation/trans999 HTTP/1.1
Accept: application/xml
Host: example.com
Content-Type: application/xml
Content-Length: nnnn

<?xml version="1.0" encoding="UTF-8"?>
<payment:amountReservationTransaction xmlns:payment="urn:oma:xml:rest:payment:1">
  <endUserId>tel:+1-555-555-0100</endUserId>
  <paymentAmount>
    <chargingInformation>
      <description>Test amount reservation transaction "Released"</description>
      <code>TEST012345</code>
    </chargingInformation>
    <transactionOperationStatus>Released</transactionOperationStatus>
    <referenceSequence>2</referenceSequence>
  </paymentAmount>
</payment:amountReservationTransaction>

5.16.5.3.2 Response

HTTP/1.1 200 OK
Content-Type: application/xml
Content-Length: nnnn
Date: Thu, 04 Jun 2009 02:51:59 GMT

<?xml version="1.0" encoding="UTF-8"?>
<payment:amountReservationTransaction xmlns:payment="urn:oma:xml:rest:payment:1">
<endUserId>tel:+1-555-555-0100</endUserId>
<paymentAmount>
  <chargingInformation>
    <description>Test amount reservation transaction "Released"</description>
    <currency>USD</currency>
    <amount>10</amount>
    <code>TEST012345</code>
  </chargingInformation>
</paymentAmount>
</payment:amountReservationTransaction>

5.16.5.4 Example 4: charge partial amount for amount reservation  (Informative)

This example assumes an initial reservation was made via referenceSequence 1 (POST request) and a partial charge against this reservation additional is requested via referenceSequence 2.

5.16.5.4.1 Request

POST /exampleAPI/1/payment/tel%3A%2B1-555-555-0100/transactions/amountReservation/trans999 HTTP/1.1
Accept: application/xml
Host: example.com
Content-Type: application/xml
Content-Length: nnnn

<?xml version="1.0" encoding="UTF-8"?><payment:amountReservationTransaction xmlns:payment="urn:oma:xml:rest:payment:1">
  <endUserId>tel:+1-555-555-0100</endUserId>
  <paymentAmount>
    <chargingInformation>
      <description>Test amount reservation transaction "Charged"</description>
      <currency>USD</currency>
      <amount>5</amount>
      <code>TEST012345</code>
    </chargingInformation>
  </paymentAmount>
  <transactionOperationStatus>Charged</transactionOperationStatus>
  <referenceSequence>2</referenceSequence>
  <referenceCode>REF-12345</referenceCode>
</payment:amountReservationTransaction>

5.16.5.4.2 Response

HTTP/1.1 200 OK
Example 5: release remaining amount reservation (Informative)

This example assumes an initial reservation was made via referenceSequence 1 (POST request) and a charge against this reservation via referenceSequence 2 (POST update), and now a release of the remaining reservation is requested via referenceSequence 3.

5.16.5.5.1 Request

POST exampleAPI/1/payment/tel%3A%2B1-555-555-0100/transactions/amountReservation/trans999 HTTP/1.1
Accept: application/xml
Host: example.com
Content-Type: application/xml
Content-Length: nnnn

<?xml version="1.0" encoding="UTF-8"?>
<!-- AMOUNT RESERVATION TRANSACTION -->
<payment:amountReservationTransaction xmlns:payment="urn:oma:xml:rest:payment:1">

5.16.5.7.2 Response

HTTP/1.1 400 Bad Request
Content-Type: application/xml
Content-Length: nnnn
Date: Thu, 04 Jun 2009 02:51:59 GMT

<?xml version="1.0" encoding="UTF-8"?>
<common:requestError xmlns:common="urn:oma:xml:rest:common:1">
  <link rel="AmountReservationTransaction"
       href="http://example.com/exampleAPI/1/payment/tel%3A%2B1-555-555-0100/transactions/amountReservation/trans999"/>
  <serviceException>
    <messageId>SVC0270</messageId>
    <text>Jarging operation failed, the charge was not applied.</text>
  </serviceException>
</common:requestError>

5.16.6 DELETE

Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: GET, POST’ field in the response as per section 14.7 of [RFC 2616].

5.17 Resource: All volume reservation transactions for an end user

The resource used is:

http://{serverRoot}/{apiVersion}/payment/{endUserId}/transactions/volumeReservation

The endUserId must be percent-encoded according to [RFC3986].

This resource is used to provide access to all the volume reservation transactions for an end user.

5.17.1 Request URI variables

The following request URI variables are common for all HTTP commands:

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>serverRoot</td>
<td>server base url: hostname+port+base path. Example: <a href="http://example.com/exampleAPI">http://example.com/exampleAPI</a></td>
</tr>
<tr>
<td>apiVersion</td>
<td>version of the ParlayREST API client wants to use (e.g. 1 for version 1.x)</td>
</tr>
<tr>
<td>endUserId</td>
<td>the end user’s account (xsd:anyURI)</td>
</tr>
</tbody>
</table>
5.17.2 Response Codes

5.17.2.1 HTTP Response Codes
For HTTP response codes, see [OMA_REST_TS_Common].

5.17.2.2 Exception fault codes
For Policy Exception and Service Exception fault codes applicable to Payment, see [3GPP 29.199-6] and section 6 of the present document.

5.17.3 GET
This operation is used to obtain all volume reservation transactions for an end user.

5.17.3.1 Example: get all volume reservation transactions (Informative)

5.17.3.1.1 Request
GET /exampleAPI/1/payment/tel%3A%2B1-555-555-0100/transactions/volumeReservation HTTP/1.1
Accept: application/xml
Host: example.com

5.17.3.1.2 Response
HTTP/1.1 200 OK
Content-Type: application/xml
Content-Length: nnnn
Date: Thu, 04 Jun 2009 02:51:59 GMT

<?xml version="1.0" encoding="UTF-8"?>
<payment:paymentTransactionList xmlns:payment="urn:oma:xml:rest:payment:1">
<!-- VOLUME RESERVATION TRANSACTION "RESERVED" -->
<paymentVolume>
  <billingText>Test volume reservation transaction "Reserved"</billingText>
  <volume>10</volume>

</paymentTransactionList>

<!-- VOLUME RESERVATION TRANSACTION "RESERVED" AFTER ADDITIONAL VOLUME IS APPLIED -->
5.17.4 PUT

Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: GET, POST’ field in the response as per section 14.7 of [RFC 2616].

5.17.5 POST

This operation is used to create a new volume transaction for an end user.
5.17.5.1 Example 1: create reserve volume

5.17.5.1.1 Request

```
POST /exampleAPI/1/payment/tel%3A%2B1-555-555-0100/transactions/volumeReservation HTTP/1.1
Accept: application/xml
Host: example.com
Content-Type: application/xml
Content-Length: nnnn

<?xml version="1.0" encoding="UTF-8"?>
<!-- VOLUME RESERVATION TRANSACTION -->
<payment:volumeReservationTransaction xmlns:payment="urn:oma:xml:rest:payment:1">
  <endUserId>tel:+1-555-555-0100</endUserId>
  <paymentVolume>
    <billingText>Test volume reservation transaction "Reserved"</billingText>
    <volume>10</volume>
    <ratingParameter>
      <name>unit</name>
      <value>minutes</value>
    </ratingParameter>
  </paymentVolume>
  <transactionOperationStatus>Reserved</transactionOperationStatus>
  <referenceSequence>1</referenceSequence>
  <clientCorrelator>66666</clientCorrelator>
</payment:volumeReservationTransaction>
```

5.17.5.1.2 Response

```
HTTP/1.1 201 Created
Content-Type: application/xml
Content-Length: nnnn
Date: Thu, 04 Jun 2009 02:51:59 GMT
Location: http://example.com/exampleAPI/1/payment/tel%3A%2B1-555-555-0100/transactions/volumeReservation/trans999

<?xml version="1.0" encoding="UTF-8"?>
<!-- VOLUME RESERVATION TRANSACTION -->

            <value>minutes</value>
        </ratingParameter>
    </paymentVolume>
    <transactionOperationStatus>Reserved</transactionOperationStatus>
    <referenceSequence>1</referenceSequence>
    <clientCorrelator>66667</clientCorrelator>
</payment:volumeReservationTransaction>

5.17.5.2.2 Response

HTTP/1.1 404 Not Found
Content-Type: application/xml
Content-Length: nnnn
Date: Thu, 04 Jun 2009 02:51:59 GMT

<?xml version="1.0" encoding="UTF-8"?>
<common:requestError xmlns:common="urn:oma:xml:rest:common:1">
    <serviceException>
        <messageId>SVC0004</messageId>
        <text>No valid addresses provided in message part %1</text>
        <variables> endUserId=tel:+1-555-555-0100 </variables>
    </serviceException>
</common:requestError>
5.17.6 DELETE
Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: GET, POST’ field in the response as per section 14.7 of [RFC 2616].

5.18 Resource: Individual volume reservation transaction for an end user
The resource used is:
http://{serverRoot}/{apiVersion}/payment/{endUserId}/transactions/volumeReservation/{transactionId}
The endUserId must be percent-encoded according to [RFC3986].
This resource is used to provide access to an individual volume reservation transaction for an end user.

5.18.1 Request URI variables
The following request URI variables are common for all HTTP commands:

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>serverRoot</td>
<td>server base url: hostname+port+base path. Example: <a href="http://example.com/exampleAPI">http://example.com/exampleAPI</a></td>
</tr>
<tr>
<td>apiVersion</td>
<td>version of the ParlayREST API client wants to use (e.g. 1 for version 1.x)</td>
</tr>
<tr>
<td>endUserId</td>
<td>the end user's account (xsd:anyURI)</td>
</tr>
<tr>
<td>transactionId</td>
<td>unique transaction identifier</td>
</tr>
</tbody>
</table>

5.18.2 Response Codes
5.18.2.1 HTTP Response Codes
For HTTP response codes, see [OMA_REST_TS_Common].

5.18.2.2 Exception fault codes
For Policy Exception and Service Exception fault codes applicable to Payment, see [3GPP 29.199-6] and section 6 of the present document.

5.18.3 GET
This operation is used to return individual completed or pending volume reservation transaction information for an end user.

5.18.3.1 Example: get volume reservation (Informative)
5.18.3.1.1 Request
GET /exampleAPI/1/payment/tel%3A%2B1-555-555-0100/transactions/volumeReservation/trans999 HTTP/1.1
Accept: application/xml
Host: example.com
5.18.3.1.2 Response

HTTP/1.1 200 OK
Content-Type: application/xml
Content-Length: nnnn
Date: Thu, 04 Jun 2009 02:51:59 GMT

<?xml version="1.0" encoding="UTF-8"?>
<!-- VOLUME RESERVATION TRANSACTION -->
<payment:volumeReservationTransaction xmlns:payment="urn:oma:xml:rest:payment:1"
</payment:volumeReservationTransaction>

5.18.4 PUT

Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: GET, POST’ field in the response as per section 14.7 of [RFC 2616].

5.18.5 POST

This operation is used to change transaction operation state to “charged” or “released” or “reserved” for a volume reservation transaction for an end user.

5.18.5.1 Example: charge volume (Informative)

This example assumes an initial reservation was made via referenceSequence 1 (POST request) and a charge against this reservation is requested via referenceSequence 2.

5.18.5.1.1 Request

POST /exampleAPI/1/payment/tel%3A%2B1-555-555-0100/transactions/volumeReservation/trans999 HTTP/1.1
Accept: application/xml
Host: example.com
Content-Type: application/xml
Content-Length: nnnn

<?xml version="1.0" encoding="UTF-8"?>
<!-- VOLUME RESERVATION TRANSACTION -->
<payment:volumeReservationTransaction xmlns:payment="urn:oma:xml:rest:payment:1">

  <paymentVolume>
    <billingText>Test volume reservation transaction "Charged"</billingText>
    <volume>10</volume>
    <ratingParameter>
      <name>unit</name>
      <value>minutes</value>
    </ratingParameter>
  </paymentVolume>
  <transactionOperationStatus>Charged</transactionOperationStatus>
  <referenceSequence>2</referenceSequence>
  <referenceCode>REF-12345</referenceCode>
</payment:volumeReservationTransaction>

### 5.18.5.1.2 Response

HTTP/1.1 200 OK
Content-Type: application/xml
Content-Length: nnnn
Date: Thu, 04 Jun 2009 02:51:59 GMT

<?xml version="1.0" encoding="UTF-8"?>
<!-- VOLUME RESERVATION TRANSACTION -->
<payment:volumeReservationTransaction xmlns:payment="urn:oma:xml:rest:payment:1">
  <endUserId>tel:+1-555-555-0100</endUserId>
  <paymentVolume>
    <billingText>Test volume reservation transaction "Charged"</billingText>
    <volume>10</volume>
    <ratingParameter>
      <name>unit</name>
      <value>minutes</value>
    </ratingParameter>
    <totalVolumeCharged>10</totalVolumeCharged>
    <volumeReserved>0</volumeReserved>
  </paymentVolume>
  <transactionOperationStatus>Charged</transactionOperationStatus>
  <referenceSequence>2</referenceSequence>
  <referenceCode>REF-12345</referenceCode>
  <clientCorrelator>66666</clientCorrelator>
  <resourceURL>http://example.com/exampleAPI/1/payment/tel%3A%2B1-555-555-0100/transactions/volumeReservation/trans999</resourceURL>
</payment:volumeReservationTransaction>

### 5.18.6 DELETE

Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: GET, POST’ field in the response as per section 14.7 of [RFC 2616].
5.19 Resource: Individual amount for volume reservation transaction for an end user

The resource used is:
http://{serverRoot}/{apiVersion}/payment/{endUserId}/transactions/volumeReservation/{transactionId}/paymentAmount

The endUserId must be percent-encoded according to [RFC3986].

This resource is used to provide access to an individual payment amount information based on provided volume reservation transaction for an end user.

5.19.1 Request URI variables

The following request URI variables are common for all HTTP commands:

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>serverRoot</td>
<td>server base url: hostname+port+base path. Example: <a href="http://example.com/exampleAPI">http://example.com/exampleAPI</a></td>
</tr>
<tr>
<td>apiVersion</td>
<td>version of the ParlayREST API client wants to use (e.g. 1 for version 1.x)</td>
</tr>
<tr>
<td>endUserId</td>
<td>the end user’s account (xsd:anyURI)</td>
</tr>
<tr>
<td>transactionId</td>
<td>unique transaction identifier</td>
</tr>
</tbody>
</table>

5.19.2 Response Codes

5.19.2.1 HTTP Response Codes

For HTTP response codes, see [OMA_REST_TS_Common].

5.19.2.2 Exception fault codes

For Policy Exception and Service Exception fault codes applicable to Payment, see [3GPP 29.199-6] and section 6 of the present document.

5.19.3 GET

This operation is used to return individual transaction payment information based on provided volume reservation transaction (calculates charge amount based on volume) for an end user.

5.19.3.1 Example: get amount for volume reservation (Informative)

5.19.3.1.1 Request

GET /exampleAPI/1/payment/tel%3A%2B1-555-555-0100/transactions/volumeReservation/trans999/paymentAmount HTTP/1.1
Accept: application/xml
Host: example.com
5.19.3.1.2 Response

HTTP/1.1 200 OK
Content-Type: application/xml
Content-Length: nnnn
Date: Thu, 04 Jun 2009 02:51:59 GMT

<?xml version="1.0" encoding="UTF-8"?>
<payment:paymentAmount xmlns:payment="urn:oma:xml:rest:payment:1">
  <chargingInformation>
    <description>10 Minutes converted to USD for transaction=trans999 of endUserId=tel:+1-555-555-0100</description>
    <currency>USD</currency>
    <amount>10</amount>
  </chargingInformation>
</payment:paymentAmount>

5.19.4 PUT

Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: GET’ field in the response as per section 14.7 of [RFC 2616].

5.19.5 POST

Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: GET’ field in the response as per section 14.7 of [RFC 2616].

5.19.6 DELETE

Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: GET’ field in the response as per section 14.7 of [RFC 2616].

5.20 Resource: Amount converted from given volume

The resource used is:

http://{serverRoot}/{apiVersion}/payment/{endUserId}/convertedVolume/paymentAmount

The endUserId must be percent-encoded according to [RFC3986].

This resource is used to provide access to amount converted from given volume.

5.20.1 Request URI variables

The following request URI variables are common for all HTTP commands:

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>serverRoot</td>
<td>server base url: hostname+port+base path. Example: <a href="http://example.com/exampleAPI">http://example.com/exampleAPI</a></td>
</tr>
<tr>
<td>apiVersion</td>
<td>version of the ParlayREST API client wants to use (e.g. 1 for version 1.x)</td>
</tr>
<tr>
<td>endUserId</td>
<td>the end user's account (xsd:anyURI)</td>
</tr>
</tbody>
</table>
5.20.2 Response Codes

5.20.2.1 HTTP Response Codes
For HTTP response codes, see [OMA_REST_TS_Common].

5.20.2.2 Exception fault codes
For Policy Exception and Service Exception fault codes applicable to Payment, see [3GPP 29.199-6] and section 6 of the present document.

5.20.3 GET
This operation is used to return the amount resulting from converting the given volume for an end user.

Request URL parameters are:

<table>
<thead>
<tr>
<th>Name</th>
<th>Type/Values</th>
<th>Optional</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>volume</td>
<td>xsd:decimal</td>
<td>No</td>
<td>The given volume to be converted</td>
</tr>
<tr>
<td>unit</td>
<td>xsd:string</td>
<td>Yes</td>
<td>Parameter to use when performing rating (e.g. “minutes”)</td>
</tr>
<tr>
<td>contract</td>
<td>xsd:string</td>
<td>Yes</td>
<td>Parameter to use when performing rating (e.g. number of a contract that may govern the use)</td>
</tr>
<tr>
<td>service</td>
<td>xsd:string</td>
<td>Yes</td>
<td>Parameter to use when performing rating (e.g. “VideoService”)</td>
</tr>
<tr>
<td>operation</td>
<td>xsd:string</td>
<td>Yes</td>
<td>Parameter to use when performing rating (e.g. “streamVideo”)</td>
</tr>
</tbody>
</table>

5.20.3.1 Example: get amount converted from volume (Informative)

5.20.3.1.1 Request

GET /exampleAPI/1/payment/tel%3A%2B1-555-555-0100/convertedVolume/paymentAmount?volume=100&unit="Minutes"&contract="MONTHLY-PLAN-001" HTTP/1.1
Accept: application/xml
Host: example.com

5.20.3.1.2 Response

HTTP/1.1 200 OK
Content-Type: application/xml
Content-Length: nnnn
Date: Thu, 04 Jun 2009 02:51:59 GMT

<?xml version="1.0" encoding="UTF-8"?>
<payment:paymentAmount xmlns:payment="urn:oma:xml:rest:payment:1">
    <chargingInformation>
        <description>100 Minutes converted to USD for endUserId=tel:+1-555-555-0100 according to contract="MONTHLY-PLAN-001"</description>
        <currency>USD</currency>
        <amount>10</amount>
    </chargingInformation>
</payment:paymentAmount>
5.20.4 PUT

Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: GET’ field in the response as per section 14.7 of [RFC 2616].

5.20.5 POST

Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: GET’ field in the response as per section 14.7 of [RFC 2616].

5.20.6 DELETE

Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: GET’ field in the response as per section 14.7 of [RFC 2616].
6. Fault definitions

6.1 Service Exceptions

None defined.

6.2 Policy Exceptions

The following Policy Exception codes are defined for the ParlayREST Payment API in addition to those in [3GPP 29.199-6].

6.2.1 POL0252: Refund request failed

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>MessageID</td>
<td>POL0252</td>
</tr>
<tr>
<td>Text</td>
<td>Refund request failed: %1.</td>
</tr>
<tr>
<td>Variables</td>
<td>%1 - textual description of failure. Value may be</td>
</tr>
<tr>
<td></td>
<td>&quot;OriginalServerReferenceCode is required in refund request&quot;,</td>
</tr>
<tr>
<td></td>
<td>&quot;Refund request amount exceeds original charge amount (charge amount included here)&quot;,</td>
</tr>
<tr>
<td></td>
<td>“The originalServerReference code is invalid”.</td>
</tr>
<tr>
<td></td>
<td>&quot;Refunds not supported by implementation&quot;.</td>
</tr>
</tbody>
</table>

6.2.2 POL0253: Payment operation refused by user

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>MessageID</td>
<td>POL0253</td>
</tr>
<tr>
<td>Text</td>
<td>Payment operation refused by user. %1</td>
</tr>
<tr>
<td>Variables</td>
<td>%1 – additional information about the refusal</td>
</tr>
</tbody>
</table>

6.2.3 POL0254: Chargeable amount exceeded

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>MessageID</td>
<td>POL0254</td>
</tr>
<tr>
<td>Text</td>
<td>Chargeable amount exceeded - %1</td>
</tr>
<tr>
<td>Variables</td>
<td>%1 - indicating whether the one-off charge limit, or the cumulative charge for a given time period, has been reached.</td>
</tr>
</tbody>
</table>
## Appendix A. Change History (Informative)

### A.1 Approved Version History

<table>
<thead>
<tr>
<th>Reference</th>
<th>Date</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>OMA-TS-ParlayREST_Payment-V1_1-20120724-A</td>
<td>24 Jul 2012</td>
<td>Status changed to Approved by TP Ref TP Doc# OMA-TP-2012-0280-INP_ParlayREST_2_0_for_Final_Approval</td>
</tr>
</tbody>
</table>
Appendix B. Static Conformance Requirements (Normative)

The notation used in this appendix is specified in [SCRRULES].

### B.1 SCR for ParlayREST.Payment Server

<table>

</table>

- **PARLAYREST-PAY-AMNT-CONV-S-001-O**
  - Support for access to amount converted from given volume
  - Reference: 5.20
  - Requirement: PARLAYREST-PAY-AMNT-CONV-S-002-O

- **PARLAYREST-PAY-AMNT-CONV-S-002-O**
  - Return the amount resulting from converting the given volume for an end user - GET
  - Reference: 5.20.3
Appendix C. Application/x-www-form-urlencoded Request Format for Selected Operations (Normative)

For selected operations, this section defines a format for Payment REST API requests where the body of the request is encoded using the application/x-www-form-urlencoded MIME type.

Note: only the request body is encoded as application/x-www-form-urlencoded, the response is still encoded as XML or JSON depending on the preference of the client and the capabilities of the server.

The following Payment REST operations are defined in this section:

- Charging an amount to an end user’s account
- Refunding an amount to an end user’s account
- Reserving a charge for an end user’s account
- Adding a charge to an existing reservation
- Charging to a previously made reservation
- Releasing funds left in a previously made reservation

C.1 Charge an Amount

This operation is used to charge a currency amount to an end-user account.

The request parameters are as follows:

<table>
<thead>
<tr>
<th>Name</th>
<th>Type/Values</th>
<th>Optional</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>endUserId</td>
<td>xsd:anyURI</td>
<td>No</td>
<td>Unique identifier for the end user’s account. If the address is in the form of an MSISDN, include the protocol prefix 'tel:' and '+' followed by the country code before the subscriber number; e.g. tel:+1-555-555-0100. If an Anonymous Customer Reference (ACR) is available, include the protocol prefix 'acr:' followed by the ACR. If endUserId is also part of the request URL, the two MUST have the same value.</td>
</tr>
<tr>
<td>transactionOperationStatus</td>
<td>xsd:string</td>
<td>No</td>
<td>Charged (see TransactionOperationStatus enumeration, section 5.2.13 for allowed strings and description)</td>
</tr>
<tr>
<td>description</td>
<td>xsd:string</td>
<td>No</td>
<td>Information that appear on the bill</td>
</tr>
<tr>
<td>currency</td>
<td>xsd:string</td>
<td>Yes</td>
<td>The currency of the amount</td>
</tr>
<tr>
<td>amount</td>
<td>xsd:decimal</td>
<td>Yes</td>
<td>The amount to be charged. The amount to be charged appears either directly in the amount-field or as code in the code-field. If both these two fields are missing or empty a service exception (SVC0007) will be thrown.</td>
</tr>
<tr>
<td>code</td>
<td>xsd:string</td>
<td>Yes</td>
<td>Charging code referencing a contract under which the charge is applied</td>
</tr>
<tr>
<td>referenceCode</td>
<td>xsd:string</td>
<td>No</td>
<td>Textual information to uniquely identify the request, for example, in the case of disputes</td>
</tr>
<tr>
<td>Field</td>
<td>Type</td>
<td>Required</td>
<td>Description</td>
</tr>
<tr>
<td>-------------------</td>
<td>------------</td>
<td>----------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>clientCorrelator</td>
<td>xsd:string</td>
<td>Yes</td>
<td>A correlator that the client can use to tag this particular resource representation during a request to create a resource on the server.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>This field SHOULD be present. Note: this allows the client to recover from communication failures during resource creation and therefore avoids re-sending the message in such situations.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>In case the field is present, the server SHALL not alter its value, and SHALL provide it as part of the representation of this resource. In case the field is not present, the server SHALL NOT generate it.</td>
</tr>
<tr>
<td>onBehalfOf</td>
<td>xsd:string</td>
<td>Yes</td>
<td>String parameter to allow aggregator or acquiring partners to specify who the payment is really by.</td>
</tr>
<tr>
<td>purchaseCategoryCode</td>
<td>xsd:string</td>
<td>Yes</td>
<td>A category defining the type of service, product or media being purchased.</td>
</tr>
<tr>
<td>channel</td>
<td>xsd:string</td>
<td>Yes</td>
<td>The channel over which the requester is interacting with the merchant, based on a pre-defined list of channels (e.g. WAP, Web, SMS...) with the ability to extend the channel list as required.</td>
</tr>
<tr>
<td>taxAmount</td>
<td>xsd:decimal</td>
<td>Yes</td>
<td>The tax amount charged by the merchant if the charge has tax already included. This also provides an indicator to the downstream billing system.</td>
</tr>
<tr>
<td>mandateID</td>
<td>xsd:string</td>
<td>Yes</td>
<td>The ID representing the subscription service or consent approval for which this charge applies. How the consent is established is out of scope.</td>
</tr>
<tr>
<td>serviceID</td>
<td>xsd:string</td>
<td>Yes</td>
<td>The ID of the partner/merchant service being purchased.</td>
</tr>
<tr>
<td>productID</td>
<td>xsd:string</td>
<td>Yes</td>
<td>Combines with the service ID to uniquely indentify the product being purchased.</td>
</tr>
</tbody>
</table>

C.1.1 Example

C.1.1.1 Request

```
POST /exampleAPI/1/payment/tel%3A%2B1-555-555-0100/transactions/amount HTTP/1.1
Accept: application/xml
Host: example.com
Content-Type: application/x-www-form-urlencoded

C.2 Refund an Amount

This operation is used to refund a currency amount to an end-user account.

The request parameters are as follows:

<table>
<thead>
<tr>
<th>Name</th>
<th>Type/Values</th>
<th>Optional</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>endUserId</td>
<td>xsd:anyURI</td>
<td>No</td>

Appendix D. JSON examples (Informative)

JSON (JavaScript Object Notation) is a lightweight, text-based, language-independent data interchange format. It provides a simple means to represent basic name-value pairs, arrays and objects. JSON is relatively trivial to parse and evaluate using standard JavaScript libraries, and hence is suited for Parlay REST invocations from browsers or other processors with JavaScript engines. Further information on JSON can be found at [RFC 4627].

The following examples show the request and response for various operations using a JSON binding. The examples follow the XML to JSON serialization rules in [OMA_REST_TS_Common]. A JSON response can be obtained by using the content type negotiation mechanism specified in [OMA_REST_TS_Common].

For full details on the operations themselves please refer to the section number indicated.

      "currency": "USD",
      "description": "Test amount reservation transaction \"Charged\""
    }
  }
}
D.26 Repeat charge request with same referenceSequence for an amount reservation (section 5.16.5.2)

Request:

```
POST /exampleAPI/1/payment/tel%3A%2B1-555-555-0100/transactions/amountReservation/trans999 HTTP/1.1
Accept: application/json
Host: example.com
Content-Type: application/json
Content-Length: nnnn

{"amountReservationTransaction": {
  "endUserId": "tel:+1-555-555-0100",
  "paymentAmount": {
    "chargingInformation": {
      "amount": "10",
      "code": "TEST012345",
      "currency": "USD",
      "description": "Test amount reservation transaction \"Charged\""
    },
    "referenceCode": "REF-12345",
    "referenceSequence": "2",
    "transactionOperationStatus": "Charged"
  }
}}
```

Response:

```
HTTP/1.1 200 OK
Content-Type: application/json
Content-Length: nnnn
Date: Thu, 04 Jun 2009 02:51:59 GMT

{"amountReservationTransaction": {
  "clientCorrelator": "55555",
  "endUserId": "tel:+1-555-555-0100",
  "paymentAmount": {
    "amountReserved": "0",
    "chargingInformation": {
      "amount": "10",
      "code": "TEST012345",
      "currency": "USD",
      "description": "Test amount reservation transaction \"Charged\""
    },
    "totalAmountCharged": "10"
  }
}}
```
D.27 Release amount reservation (section 5.16.5.3)

Request:

POST /exampleAPI/1/payment/tel%3A%2B1-555-555-0100/transactions/amountReservation/trans999 HTTP/1.1
Accept: application/json
Host: example.com
Content-Type: application/json
Content-Length: nnnn

{"amountReservationTransaction": {
  "endUserId": "tel:+1-555-555-0100",
  "paymentAmount": {
    "chargingInformation": {
      "description": "Test amount reservation transaction \"Released\"
    },
    "referenceSequence": "2",
    "transactionOperationStatus": "Released"
  }
}}

Response:

HTTP/1.1 200 OK
Content-Type: application/json
Content-Length: nnnn
Date: Thu, 04 Jun 2009 02:51:59 GMT

{"amountReservationTransaction": {
  "clientCorrelator": "55556",
  "endUserId": "tel:+1-555-555-0100",
  "paymentAmount": {
    "amountReserved": "0",

Table 1: Parlay X operations mapping
Appendix F.  Mapping of ParlayREST Reservation Transactions to the Charging Enabler (Informative)

ParlayREST contains functionality for payment operations which has been designed such that it can be easily mapped to Parlay X operations. The OMA Charging Enabler provides details for Event and Session based Charging. A mapping of ParlayREST to the OMA Charging Enabler is straightforward in the case of Event based Charging. For the case of Session based Charging, this appendix elaborates on the details of the mapping because the underlying assumptions are different in the OMA Charging Enabler and Parlay X / ParlayREST.

ParlayREST contains functionality for Reservation-based payment operations (sections 5.15 5.16, 5.17, 5.18). The specification of Session based Charging in the OMA Charging Enabler defines the use of the Reserve Units, ReserveAndDebit Units and Debit Units operations and the respective messages, i.e. Charging Request and Charging Response message, in [CHRG TS ONLINE].

The section below describes the mapping of the ParlayREST Reservation Transactions to the Reserve Units and Debit Units operations can be achieved.

F.1 Charging Mechanism

Charging uses the Reserve Units, ReserveAndDebit Units and Debit Units operations and allows to open a charging session, which starts by reserving units (amount or volume), then continuously doing debiting of the used units, as well as reservation of new units, and finally closing the charging session [CHRG TS ONLINE].

The three phases of a Charging session are as follows:

1. In a first step (first interrogation), a Reserve Units operation is performed. This maps 1:1 to the reserving operation “nil → reserved”. The application acting as a Charging Enabler User requests a number of units (money, data volume, usage time etc.), called RSU (Requested Service Units), from the Charging Enabler. At the end of this step, the Charging Enabler has deducted a certain number of units from the user’s account, and has granted them to the Charging Enabler User for consumption. These units are named GSU (Granted Service Units).

2. In subsequent steps (intermediate interrogation), the ReserveAndDebit Units operation is used by the application to debit consumed units and to make new reservations in one operation. Such ReserveAndDebit Units request includes the number of Used Service Units (USU) for debiting and a number of Requested Service Units (RSU) for subsequent consumption. Note that all GSU from a previous step are rendered invalid at this point in time. The Charging Enabler debits the USU to the user’s account, and returns a new GSU to the application for consumption. This step can be performed multiple times.

3. In a last step (final interrogation), the last debiting of Used Service Units (USU) is invoked by the application with the Debit Units operation. The Charging Enabler debits the USUs, puts the remaining GSUs back into the user’s account and closes the session.

Compared to the Parlay X Payment API, in the Charging Enabler there is a tighter coupling of reservation and debiting. Parlay X has separate methods for doing an initial reservation (ReserveAmount / ReserveVolume), reserving additional units (ReserveAdditionalAmount / ReserveAdditionalVolume), debiting used units (ChargeReservation) and releasing the session (ReleaseReservation). In ParlayREST, these are reflected by the separate POST requests. In the Charging Enabler, debiting and reserving, as well as debiting and releasing, are coupled.

F.2 Detailed Mapping of ParlayREST to Charging Enabler

The previous section has outlined the basic flow in Session Charging, and the different approaches in ParlayX / ParlayREST and the OMA Charging Enabler. The OMA Charging Enabler maps the Reserve Units, ReserveAndDebit Units and Debit Units operations to Charging Request and Charging Response message pairs.

This section describes a possible realization of the transaction operation state transitions in ParlayREST (see section 5.2.13) based on those Charging Request and Charging Response message pairs.
In order to be able to use a unified pattern for amount and volume charging, the following conventions are used below: The variable $amountVolumeReserved$ corresponds to the ParlayREST elements $amountReserved$ and $volumeReserved$. The variable $totalAmountVolumeCharged$ corresponds to the ParlayREST elements $totalAmountCharged$ and $totalVolumeCharged$. The variable $amountVolume$ corresponds to the ParlayREST elements $paymentAmount/amount$ and $paymentVolume/volume$. The parameters GSU, RSU and USU are as defined above.

In the following mappings the USU parameter is set to zero wherever applied indicate that no units has to be debited. It is also taken into account that the credit expires at each intermediate interrogation in the Charging Enabler, but that reservations are cumulative in Parlay X and therefore in ParlayREST.

1) initial reserving as part of ParlayREST resource creation

Remark: this operation has a direct correspondence in the Reserve Units operation

\[ RSU = amountVolume \]
\[ \text{send Charging Request(INITIAL, RSU) and receive Charging Response(INITIAL, GSU)} \]
\[ amountVolumeReserved = GSU \]

2) charging as ParlayREST resource update

Remark: here, the RSU needs to reflect the previous reservation minus what is requested to be debited

\[ USU = amountVolume \]
\[ RSU = \max[amountVolumeReserved - amountVolume, 0] \]
\[ \text{send Charging Request(UPDATE, USU, RSU) and receive Charging Response(UPDATE, GSU)} \]
\[ totalAmountVolumeCharged = totalAmountVolumeCharged + amountVolume \]
\[ amountVolumeReserved = GSU \]

3) reserving as ParlayREST resource update

Remark: here, the RSU needs to reflect the previous reservation plus what is requested to be reserved. USU set to zero as there is no debit here.

\[ RSU = amountVolumeReserved + amountVolume \]
\[ USU = 0 \]
\[ \text{send Charging Request(UPDATE, USU, RSU) and receive Charging Response(UPDATE, GSU)} \]
\[ amountVolumeReserved = GSU \]

4) releasing as ParlayREST resource update

Remark: the USU is set to zero as there is no debit here.

\[ USU = 0 \]
\[ \text{send Charging Request(TERMINATION, USU) and receive Charging Response(TERMINATION, USU)} \]
\[ amountVolumeReserved = 0 \]

Note that the sequence (2), (3) can be called 0 or more times.

Note: In case of insufficient credit for the steps (1) and (3) one of the following cases depending on operator policy and/or particular deployment may occur: The server returns an actual reservation that is smaller than the requested one or throws an exception. A client needs to be prepared to handle both cases.
