3. Terminology and Conventions

3.1 Conventions

The key words “MUST”, “MUST NOT”, “REQUIRED”, “SHALL”, “SHALL NOT”, “SHOULD”, “SHOULD NOT”, “RECOMMENDED”, “MAY”, and “OPTIONAL” in this document are to be interpreted as described in [RFC2119].

All sections and appendixes, except “Scope” and “Introduction”, are normative, unless they are explicitly indicated to be informative.

The formal notation convention used in sections 8 and 9 to formally express the structure and internal dependencies between specifications in the Enabler Release specification baseline is detailed in [IOPPROC].

</tr>
</tbody>
</table>
Controlling PoC Function

The Controlling PoC Function is implemented in a PoC Server and provides centralized PoC Session handling, which includes RTP Media distribution, Talk Burst Control, policy enforcement for participation in Group Sessions, and the Participant information.

Conversation

A Conversation is a series of Talk Bursts within a PoC Session in which the inter-arrival spacing of the Talk Bursts is less than a defined time interval; typically, the Talk Bursts are associated to a logical exchange between two or more users.

Distinguished Participant

The Distinguished Participant is a Participant in a 1-many-1 Session that sends RTP Media to all Ordinary Participants, and that receives RTP Media from any Ordinary Participant.

Dormant PoC Session

A Dormant PoC Session is a PoC Session in which the user receives TBCP and no RTP Media. If the user has multiple PoC Sessions, all except at most one PoC Session are dormant.

Exploder URI

An Exploder URI is an address of a SIP URI-list service. A URI-list service is a specialized application service that receives a SIP request with a list of URLs and generates a similar SIP request to each of the URLs on the list. The SIP URI-list service includes a copy of the body of the original SIP request in the generated SIP requests.

Filter Criteria

Filter Criteria is routing logic used in the 3GPP IMS or 3GPP2 MMD SIP Core to route SIP requests to the correct Application Server.

Group

A Group is a predefined set of PoC users that is identified by a SIP URI. A PoC Client uses the Group to establish PoC Sessions and to define PoC Session access policy.

Group Advertisement

A Group Advertisement is a feature that provides the capability to inform other PoC Users of the existence of a PoC Group.

Group List

A list of members in a Pre-arranged or Restricted Chat PoC Group. Each member is identified by a SIP URI or a TEL URL.

Home PoC Network

The Home PoC Network is a network comprising a SIP/IP Core and PoC Server, both operated by the user's PoC service provider. The Home PoC Network is the same as the Home Network defined in IMS and MMD specifications.

Home PoC Server

The Home PoC Server is the PoC Server owned by service provider that provides PoC service to the user.

Incoming Instant Personal Alert Barring

Incoming Instant Personal Alert Barring is a PoC service setting for the PoC Client that conveys the PoC User's desire for the PoC service to block all incoming Instant Personal Alerts.

Incoming PoC Session Barring

Incoming PoC Session Barring is a PoC service setting for the PoC Client that conveys the PoC User's desire for the PoC service to block all incoming PoC Session requests.

Instant Personal Alert

Instant Personal Alert is a feature in which a PoC User sends a SIP based instant message to a PoC User requesting a 1-1 PoC Session.

Invited PoC Client

An Invited PoC Client is a PoC Client that is invited to a PoC Session.

Inviting PoC Client

An Inviting PoC Client is a PoC Client that invites other PoC User(s) to a PoC Session.

Invited PoC User

The PoC User who has been invited to a PoC Session.

Manual Answer Mode

Manual Answer Mode is a mode of operation in which the PoC Client requires the PoC User to manually accept the PoC Session invitation before the PoC Session is established.

Media Parameters

Media Parameters are SIP/SDP based information exchanged between the PoC Server and the PoC Client that specify the characteristics of the media for a PoC Session being established or that already exists.

On-demand Session

An On-Demand Session is a PoC Session set-up mechanism in which all Media Parameters are negotiated at PoC Session establishment.

Ordinary Participant

An Ordinary Participant is a Participant in a 1-many-1 Session that is only able to send media to the Distinguished Participant, and that likewise is only able to receive media from the Distinguished Participant.

Participant

A Participant is a PoC User in a PoC Session.

Participating PoC Function

The Participating PoC Function is implemented in a PoC Server, and provides PoC Session handling, which includes policy enforcement for incoming PoC Sessions and relays Talk Burst Control messages between the PoC Client and the PoC Server performing the Controlling PoC Function. The Participating PoC Function may also relay RTP Media between the PoC Client and the PoC Server performing the Controlling PoC Function.
PDP Context
Packet Data Protocol Context. A Packet Data Protocol (PDP) Context is a logical connection between a terminal and network, as defined in 3GPP General Packet Radio Service (GPRS) specifications. A PDP Context, as a logical connection, is mapped onto a physical layer radio connection. A PDP Context may be closely associated with a single application level flow, e.g., a voice service instance, or it may support multiple application level flows, e.g., a best effort packet data service instance.

PoC Address
A PoC Address identifies a PoC User. The PoC Address can be used by one PoC User to request communication with other PoC Users.

PoC Client
A PoC Client is a PoC functional entity that resides on the PoC User Equipment that supports the PoC service.

PoC Group
A PoC Group is a predefined set of PoC Users together with its attributes. A PoC Group is identified by a SIP URI.

PoC Group Identity
The PoC Group Identity is a SIP URI of the Pre-arranged PoC Group or Chat PoC Group.

PoC Group Session
A PoC Group Session is a Pre-arranged PoC Group, Ad-hoc PoC Group or Chat PoC Group Session.

PoC Server
The PoC Server implements the 3GPP IMS and 3GPP2 MMD application level network functionality for the PoC service. A PoC Server may perform the role of the Controlling PoC Function or Participating PoC Function, or both at the same time.

PoC Session
A PoC Session is a SIP session established by the procedures of this Specification. This Specification supports the following types of PoC Sessions: 1-1 PoC, Ad-hoc PoC Group, Pre-arranged PoC Group, or Chat PoC Group Session.

PoC Session Identifier
The PoC Session Identifier is an identifier associated with a PoC Session that uniquely distinguishes a particular PoC Session from all other PoC Sessions, including those that currently exist and those that do not.

PoC Session Identity
SIP URI received by the PoC Client during the PoC Session establishment in the Contact header or in the TBCP Connect message in case of using Pre-established Session.

PoC Subscriber
A PoC Subscriber is one whose service subscription includes the PoC service.

NOTE: In [PoC RD V1.0] the term “PoC Subscriber” is sometimes used to mean the same as term “PoC User” in [OMA PoC AD], [OMA PoC CP] and [OMA PoC UP].

PoC User
A PoC User is a user of the PoC service.

NOTE: In [PoC RD V1.0] the term “PoC Subscriber” is sometimes used to mean the same as term “PoC User” in [OMA PoC AD], [OMA PoC CP] and [OMA PoC UP].

Pre-arranged PoC Group
A Pre-arranged PoC Group is a persistent PoC Session Identity that has an associated set of PoC members. The establishment of a PoC Session to a prearranged PoC Group results in all members being invited.

Pre-established Session
The Pre-established Session is a SIP Session established between the PoC Client and the PoC Server that performs the Participating PoC Function. The PoC Client establishes the Pre-established Session prior to making requests for PoC Sessions to other PoC users. To establish a PoC Session based on a SIP request from the user, the PoC Server conferences other PoC Servers/Users to the Pre-established Session so as to create an end-to-end connection.

Primary PoC Session
The Primary PoC Session is a PoC Session that the PoC User selects in preference to other PoC Sessions. When the user has Simultaneous PoC Sessions, the Primary PoC Session has a priority over Secondary PoC Sessions.

Remote PoC Network
A Remote PoC Network is a network that consists of a SIP/IP Core and a PoC Server. The Remote PoC Network is owned or operated by a service provider other than the one to which the PoC Client subscribes.

Restricted Group
A Group that can be joined only by a PoC User that is a member of the Group. A Restricted Group has a Group List.

RTP Media
RTP Media is the media carried in an RTP payload.

RTP Session
A RTP Session is considered as an association that allows exchange of RTP Media streams and RTCP messages among a set of PoC functional entities.
Secondary PoC Session
A Secondary PoC Session is a PoC Session for which the PoC User receives media when there is no media present on the Primary PoC Session.

Session Type
A Session Type is a SIP URI-parameter used to convey the type of SIP URI, and may take on one of the following values: adhoc, prearranged, chat or 1-1.

Served PoC User
A PoC User that obtains a PoC service from a PoC Server located in the Home PoC Network.

Service Instance
A Service Instance is the instantiation of a logical connection across the radio interface associated with a particular protocol stack. Service Instances, as logical connections, are mapped onto the physical layer radio connections. A Service Instance may be closely tied to a single application level flow, e.g., a voice service instance, or may support multiple application level flows, e.g., a best effort packet data service instance.

SigComp
SIGCOMP is a signaling compression mechanism specified in [RFC3320]; SIGCOMP in PoC provides for the compression of SIP requests and responses.

Simultaneous PoC Session
When a PoC User is a Participant in more than one PoC Session simultaneously using the same PoC Client.

SIP Session
A SIP Session is a SIP dialog. From RFC 3261, a SIP dialog is defined as follows: A dialog is a peer-to-peer SIP relationship between two UAs that persists for some time. A dialog is established by SIP messages, such as a 2xx response to an INVITE request. A dialog is identified by a call identifier, local tag, and a remote tag. A dialog was formerly known as a call leg in RFC 2543.

SIP URI
From RFC 3261: "A SIP or SIPS URI identifies a communications resource" and "follows the guidelines in RFC 2396 [5]". PoC uses SIP URIs to identify PoC Clients, PoC Servers, and PoC Sessions, resource lists that point to URI lists, etc.

SIP User Agent
A SIP User Agent is any SIP peer that performs SIP signaling [RFC3261].

Talk Burst
A Talk Burst is the flow of media from a PoC Client while that has the permission to send media.

Talk Burst Control
Talk Burst Control is a control mechanism that arbitrates requests from the PoC Clients, for the right to send media.

NOTE: In [PoC RD V1.0] the term “Floor Control” is used to mean the same as term “Talk Burst Control” in [OMA PoC AD], [OMA PoC CP] and [OMA PoC UP].

Talk Burst Control Protocol
Talk Burst Control Protocol (TBCP) is a protocol for performing Talk Burst Control, and is defined in these specifications.

Talker Identification
Talker Identification is the procedure by which the current talker’s identity is determined and made known to listeners on the PoC Session.

Unconfirmed Indication
The Unconfirmed Indication is an indication returned by the PoC Server to confirm that it is able to receive media and believes the PoC Client is able to accept media; the PoC Server sends the Unconfirmed Indication prior to determining that all egress elements are ready or even able to receive media.

Unrestricted Group
An Unrestricted Group is a PoC Group that any PoC User may join.

User
A User is any entity that uses the described features through the User Equipment.

User Equipment
User Equipment is a hardware device that supports a PoC Client e.g., a wireless phone.

User Plane
The User Plane includes the media and media control signaling (e.g., Talk Burst Control Protocol) between the PoC Client and PoC Server.

4. Introduction

This document outlines the Enabler Release Definition for Push To Talk over Cellular (PoC) version 1.0 and the respective conformance requirements for clients and servers implementing claiming compliance to it as defined by Open Mobile Alliance across the specification baseline.

Push To Talk over Cellular (PoC) service is a two-way form of communications that allows users to engage in immediate communication with one or more users. POC service is similar to a “walkie-talkie” application in the way that by pressing a button a talk session with an individual user or a broadcast to a group of participants is initiated. Receiving participants hear the sender’s voice either without any action on their part (auto-answer mode), or may be notified and has to accept the call (manual answer mode) before listening to the sender’s voice. In addition, the PoC service provides 2 models for PoC Session establishment: the Pre-established Session mode and the On-demand Session mode. The communication is half-duplex, meaning that one person can talk at a time and all other participants hear the speech. The permission for talk right granting is controlled via the floor control mechanism. The PoC service enabler supports the:

- 1-1 PoC Session which is the basic capability to set up voice communication between two users
- 1-to-many PoC Session which is the capability to enable the setup a voice communication with a multiple number of other PoC Subscribers in an ad-hoc or pre-defined group manner
- Instant Personal Alert which is the capability to inform about the calling user’s wish to communicate and the request the invited user to “call-back”.

The PoC service enabler utilizes basic inter-working with the Group Management service enabler and the Presence service enabler. Key features to these enablers are e.g. group lists creation and management functions, group sessions emulating conferencing on demand and integration of user’s presence & availability information in the session setup process. Complementing the basic PoC service, Group Advertisement is available to inform PoC Group members about the existence and the membership of the group.
5. Description of Differences from Previous Version

There are no previous versions
6. Document Listing for PoC

The PoC enabler is comprised of the following specifications:

<table>
<thead>

7. Minimum Functionality Description for PoC

This section is informative.

The minimum mandatory functionality for PoC Client and PoC Server includes:

1. PoC Client:
   - Registration and de-registration
   - PoC Session initiation, modification, joining and leaving, termination
   - On-demand Session establishment
   - PoC session handling for 1-to-1 communication, Pre-arranged PoC Group, Chat Group and Adhoc PoC Group communication
   - Instant Personal Alert (receiving)
   - Incoming PoC Session Barring
   - Manual Answer Mode or Automatic Answer Mode for incoming PoC session invitations
   - Activation and deactivation of setting for service attributes (e.g. Incoming PoC Session Barring, Answer Mode) towards PoC Server
   - Media transport (including support of UDP, port number handling, RTP, RTCP)
   - Media control by supporting RTCP Sender Report/Receiver Report (SR/RR) compound packets
   - PoC Session control
   - Talk Burst Control Protocol (TBCP)
   - Timer Handling

2. PoC Server:
   - Determination of PoC Server role for performing the Participating or Controlling PoC Function or both.
   - Common basic functions for Participating or Controlling PoC Function:
     - Support of PoC Session initiation, modification, joining and leaving, termination
     - PoC Session handling for 1-to-1 communication, Pre-arranged PoC Group, Chat Group and Adhoc PoC Group communication
     - Talk Burst Control Protocol (TBCP)
     - Media control by supporting RTCP Sender Report/Receiver Report (SR/RR) compound packets
     - On-demand Session establishment
   - Additional specific functions for PoC Server performing the Participating PoC Function
     - Manual or Automatic Answer Mode handling for PoC Session establishment
     - Setting, storing and enforcing different service attribute settings for the PoC Client
   - Additional specific functions for PoC Server performing the Controlling PoC Function
     - Media transport (including support of UDP, port number handling, RTP, RTCP)
     - PoC Session control
     - Session modification for Media Parameter according to local policy and based on lowest negotiated media parameters
PoC enabler defines the following optional functionality:

1. PoC Client
   - Group Advertisement
   - Pre-established PoC Sessions
   - Simultaneous PoC Sessions
   - Scheduling of RTCP packages
   - Talker identification
   - Talk Burst queuing (e.g. positioning, status) and priority
   - Media Adaptation (voice frame packetisation, voice codec adaptation)
   - Timer Handling

2. PoC Server
   - Common basic functions:
     - Media control by supporting quality feedback
     - User Plane adaptation
     - Instant Personal Alert Barring
     - Group Advertisement
     - Media Transcoding
   - Additional specific functions for PoC server performing the Participating PoC Function
     - Pre-established PoC Session
     - Simultaneous PoC Sessions
     - Media relay function
     - Media transport (including support of UDP, port number handling, RTP, RTCP)
     - Timer Handling
   - Additional specific functions for PoC server performing the Controlling PoC Function
     - Talk Burst operation for queuing (e.g. state, position) and priority
     - Session modification for media capabilities according to local policy and based on lowest negotiated media parameters

The PoC enabler defines the following external dependencies:

- Mandatory
  - Group Management Service Enabler
  - Device management
  - Charging
- SIP/IP core: IP Multimedia Subsystem (IMS) – comment: Chapter 5-Architecture (under Table 1) states that “… SHALL utilize SIP/IP core from IMS as specified in 3GPP and 3GPP2.

- SIP/IP core: Multimedia Domain (MMD) – comment: Chapter 5-Architecture (under Table 1) states that “… SHALL utilize SIP/IP core from IMS as specified in 3GPP and 3GPP2.

• Optional

  ▪ Presence Service Enabler
8. Conformance Requirements Notation Details

This section is informative

The ERDEF tables are defined in the following chapters for:

- PoC Client,
- PoC Server performing the Participating PoC Function and,
- PoC Server performing the Controlling PoC Function.

Each ERDEF table identifies a list of supported features as:

**Item**: Identifier for a feature (according to [IOPPROC]).

**Feature/Application**: Short description of the feature labeled in column “Item”.

**Status**: Whether support for the feature is mandatory or optional.

- **M** means the **Item** is mandatory
- **O** means the **Item** is optional

“M” is used for mandatory support and “O” for optional support in this column.

**Requirement**: This column identifies other features required by this feature. If no other features are required, this column is left empty.

The ERDEF notation as given in this section is consistent with the SCR notation as used in the [POC-CP] and [POC-UP]. The dependency grammar notation to be used in the Requirement column of the ERDEF tables using ABNF [RFC4234] are described as:

TerminalExpression = ScrReference / NOT TerminalExpression / TerminalExpression LogicalOperator

TerminalExpression / “(" TerminalExpression “)"

ScrReference = ScrItem / ScrGroup

ScrItem = SpecScrName “–” GroupType “–” DeviceType “–” NumericId / SpecScrName “–” DeviceType “–” NumericId

ScrGroup = SpecScrName “:” FeatureType / SpecScrName “–” GroupType “–” DeviceType “–” FeatureType

SpecScrName = 1*Character;

GroupType = 1*Character;

DeviceType = “C” / “S”; C – client, S – server

NumericId = Number Number Number

LogicalOperator = “AND” / “OR”; AND has higher precedence than OR and OR is inclusive

FeatureType = “MCF” / “OCF” / “MSF” / “OSF”; See Section A.1.6

Character = %x41-5A ; A-Z

Number = %x30-39 ; 0-9
9. ERDEF for PoC - Client Requirements

This section is normative.
