3. Terminology and Conventions

3.1 Conventions

The key words “MUST”, “MUST NOT”, “REQUIRED”, “SHALL”, “SHALL NOT”, “SHOULD”, “SHOULD NOT”, “RECOMMENDED”, “MAY”, and “OPTIONAL” in this document are to be interpreted as described in [RFC2119].

All sections and appendixes, except “Scope” and “Introduction”, are normative, unless they are explicitly indicated to be informative.

3.2 Definitions

For the purpose of this TS, all definitions from the OMA Dictionary apply [OMA-DICT].

Address Book Refer to [CAB_APIs RD]
CAB User Refer to [CAB_APIs RD]
Contact Entry Refer to [CAB_APIs RD]
Contact Share Refer to [CAB_APIs RD]
Contact Status Refer to [CAB_APIs RD]
Contact Subscription Refer to [CAB_APIs RD]
Contact View Refer to [CAB_APIs RD]
External Requests A request by which the CAB Enabler is instructed to interact with an External Entity on user’s behalf (e.g. import user’s profile information from 3rd Party System)
Group-Details Structure within the PCC that represents the information pertinent to a group inside a PCC document (i.e. <group-details> as defined in [CAB XDMS] sect. 5.2.1 “PCC Application Usage”).
Heavy-weight Resource A resource which is identified by a resource URL which is then used by HTTP methods to operate on the entire data structure representing the resource.
JavaScriptObjectNotation Refer to [CAB_APIs RD]
Legacy Formats Refer to [CAB_APIs RD]
Light-weight Resource A subordinate resource of a Heavy-weight Resource which is identified by its own resource URL which is then used by HTTP methods to operate on a part of the data structure representing the Heavy-weight Resource. The Light-weight Resource URL can be seen as an extension of the Heavy-weight Resource URL.

There could be several levels of Light-weight Resources below the ancestor Heavy-weight Resource, depending on the data structure.
Org-Details Structure within the PCC that represents the information pertinent to an organization inside a PCC document (i.e. <org-details> as defined in [CAB XDMS] sect. 5.2.1 “PCC Application Usage”).
Personal Contact Card Refer to [CAB_APIs RD]
Person-Details Structure within the PCC that represents the information pertinent to an individual inside a PCC document (i.e. <person-details> as defined in [CAB XDMS] sect. 5.2.1 “PCC Application Usage”).
Published Contact Card Refer to [CAB_APIs RD]

4. Introduction

The Technical Specification for the OMA RESTful CAB API contains HTTP protocol bindings for Converged Address Book (CAB) Enabler, using the REST architectural style. The specification provides resource definitions, the HTTP verbs applicable for each of these resources, and the element data structures, as well as support material including flow diagrams and examples using the various supported message body formats (i.e. XML, JSON, and application/x-www-form-urlencoded).

The JSON format used in the CAB APIs 1.0 specification should follow requirements in [REST_common].

4.1 Version 1.0

Version 1.0 of this specification supports operations exposing the CAB PCC and AB data.

The following operations have been reused from the [Addressbook TS 1.0] as follows:

- reused by CAB APIs entirely (“as is”):
  - management of contacts in the CAB AB and their attributes
  - manage subscriptions to CAB AB changes
  - send notifications about AB changes

- enhanced with additional extensions (e.g. resources, data types or values) for CAB APIs v1.0
  - manage ContactSubscription lists
  - manage subscriptions to contacts’ CAB PCC changes
  - send notifications about contact’s PCC changes
  - authorization (management of CAB PCC and AB AccessPermissions)

The following operations have been introduced by CAB APIs specifications:

- management of user profile (CAB PCC)
- support for external requests (e.g. import and export of contacts and profiles from external parties, subscriptions to external profiles changes and notifications)

The following new functionality has been introduced:

- Support for scope values used with authorization framework defined in [Autho4API_10]
- Support for Anonymous Customer Reference (ACR) as an end user identifier
- Support for “acr:auth” as a reserved keyword in an ACR
5. CAB API definition

This section is organized to support a comprehensive understanding of the CAB API design. It specifies the definition of all resources, definition of all data structures, and definitions of all operations permitted on the specified resources.

Common data types, naming conventions, fault definitions and namespaces are defined in [OMA_REST_NetAPI_Common].

The remainder of this document is structured as follows:

Section 5 starts with a diagram representing the resources hierarchy followed by a table listing all the resources (and their URL) used by this API, along with the data structure and the supported HTTP verbs (section 5.1). What follows are the data structures (section 5.2). A sample of typical use cases is included in section 5.3, described as high level flow diagrams.

Section 6 contains the detailed specification for each of the resources. Each such subsection defines the resource, the request URL variables that are common for all HTTP methods, the possible HTTP response codes, and the supported HTTP verbs. For each supported HTTP verb, a description of the functionality is provided, along with an example of a request and an example of a response. For each unsupported HTTP verb, the returned HTTP error status is specified, as well as what should be returned in the Allow header.

All examples in section 6 use XML as the format for the message body. Application/x-www-form-urlencoded examples are provided in Appendix C, while JSON examples are provided in Appendix D.

Section 7 contains fault definition details such as Service Exceptions and Policy Exceptions.

Appendix B provides the Static Conformance Requirements (SCR).

Appendix E provides the operations mapping to a pre-existing baseline specification, where applicable.

Appendix F provides a list of all Light-weight Resources, where applicable.

Appendix G defines authorization aspects to control access to the resources defined in this specification.

Appendix H describes the CAB APIs resources that a 3rd Party system can expose to facilitate the interaction with the CAB Server in order to fulfill Import, Export and Subscription External Requests.

Note: Throughout this document client and application can be used interchangeably.

---

Conventions in this specification

The RESTful CAB APIs specification inherits and extends the Addressbook API as specified in [Addressbook TS 1.0]. Therefore the operations and data types reused from [Addressbook TS 1.0] are marked as such throughout the CAB APIs TS.

The data types tables in section 5.2 contain two additional columns compared to the original TS template, in order to clearly distinguish between reuse and extensions. These additional columns contain details of the reuse, extended data and/or a specific usage indication within the CAB APIs, as follows:

- "Defined in" column: contains the specification that defines the data type and it can be any one of: [Addressbook TS 1.0], or CAB APIs TS 1.0.

- "Reuse or extended use description": provides details regarding the assigned usage within the CAB APIs specification (e.g. "not used in CAB APIs", "used in CAB APIs for subscription-list, etc."
5.1 Resources Summary

This section summarizes all the resources used by the CAB API.

The "apiVersion" URL variable SHALL have the value "v1" to indicate that the API corresponds to this version of the specification. See [REST_NetAPI_Common] which specifies the semantics of this variable.

The figure below visualizes the resource structure defined by this specification. Note that those nodes in the resource tree which have associated HTTP methods defined in this specification are depicted by solid boxes.

---

**Figure 1 Resource structure defined by this specification**
The following tables give a detailed overview of the resources defined in this specification, the data type of their representation and the allowed HTTP methods.
Purpose: Address Book operations: to allow client to manage all contacts

<table>

<td>As defined in [Addressbook TS 1.0].</td>
</tr>
</tbody>
</table>

Table 6 Access Permissions management
5.2  CAB Data Types

5.2.1  XML Namespaces

The XML namespace for the CAB data types is:

urn:oma:xml:rest:netapi:cab:1

The 'xsd' namespace prefix is used in the present document to refer to the XML Schema data types defined in XML Schema [XMLSchema1, XMLSchema2]. The 'common' namespace prefix is used in the present document to refer to the data types defined in [REST_NetAPI_Common]. The use of namespace prefixes such as 'xsd' is not semantically significant.

5.2.2  Structures

The subsections of this section define the data structures used in this RESTful CAB APIs.

Some of the structures can be instantiated as so-called root elements, i.e. they define the type of a representation of a so-called Heavy-weight Resource.

The column [ResourceRelPath] in the tables below, if used, includes relative resource paths for Light-weight Resource URLs that are used to access individual elements in the data structure (so-called Light-weight Resources). A string from this column needs to be appended to the corresponding Heavy-weight Resource URL in order to create Light-weight Resource URL for that particular element in the data structure. “Not applicable” means that individual access to that element is not supported. The root element and data type of the resource associated with the [ResourceRelPath] are defined by the Element and Type columns in the row that defines the [ResourceRelPath].

For structures that contain elements which describe a user identifier, the statements in section 6 regarding 'tel', 'sip' and 'acr' URI schemes apply.

5.2.2.1  Type: ContactCollection

Collection of all individual contacts for a user, in the form of a flat unique list

This data type is defined in the [Addressbook TS 1.0].sect. 5.2.2.1, and reused by CAB APIs.

5.2.2.2  Type: Contact

Individual contact information in the flat unique list of contacts

This data type is defined in the [Addressbook TS 1.0].sect. 5.2.2.2, and reused by CAB APIs.

5.2.2.3  Type: SharedIdentity

List of publicly known identities

This data type is defined in the [Addressbook TS 1.0].sect. 5.2.2.3, and reused by CAB APIs.

5.2.2.4  Type: AttributeList

Attributes of a list member (subscription-list entry), or a contact or a profile.

This data type is defined in the [Addressbook TS 1.0].sect. 5.2.2.6, and it is used by CAB APIs only as part of the ‘Profile’, ‘Member’ and ‘Contact’ data type structures (and not for ‘List’).

5.2.2.5  Type: Attribute

Individual attribute of a list member (subscription-list entry), or a contact or a profile.

This data type is defined in the [Addressbook TS 1.0].sect. 5.2.2.7, and it is and it is used by CAB APIs only as part of the ‘Member’, ‘Profile’ and ‘Contact’ data type structures (and not for ‘List’).
The following extension is introduced for support of profile, based on the extensibility of the Attribute data type through `<any element>`:

<table>
<thead>
<tr>
<th>Element</th>
<th>Type</th>
<th>Optional</th>
<th>Description</th>
<th>Defined in</th>
<th>Reuse or extended use description</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>xsd:string</td>
<td>No</td>
<td>The following names of the attribute are predefined by this specification, in addition to the ones available in [Addressbook TS 1.0] sect. 5.2.2.7: “Profile” is a reserved name and SHALL only be used to access the CAB PCC [CAB XDMS]. “XMLObj” is a reserved name and SHALL only be used to access the entire XML document, or fragment of an XML document, e.g. CAB PCC as an opaque object.</td>
<td>[Addressbook TS 1.0]</td>
<td>Element reused for CAB APIs, and extended with new pre-defined values: “XMLObj” and “Profile”.</td>
</tr>
<tr>
<td>value</td>
<td>xsd:string</td>
<td>Choice</td>
<td>Optional element; if present it provides the value of the attribute.</td>
<td>[Addressbook TS 1.0]</td>
<td>Element reused for CAB API. Not used when name=”Profile”.</td>
</tr>
<tr>
<td>objectValue</td>
<td>xsd:base64Binary</td>
<td>Choice</td>
<td>Optional element; if present it contains a base64Binary object. In case name is “vCard2.1” this element SHALL contain a base64Binary encoded vCard2.1 object. In case name is “vCard3.0” this element SHALL contain a base64Binary encoded vCard3.0 object. In case the name is “XMLObj”, this element SHALL contain a base64Binary encoded XML object.</td>
<td>[Addressbook TS 1.0]</td>
<td>Element reused for CAB APIs, and extended with provisions for the new pre-defined value: “XMLObj”.</td>
</tr>
</tbody>
</table>

XSD modelling uses an optional “choice” to select either a value or an objectValue or `<any element>`, or none of them.

A root element named attribute of type Attribute is allowed in request and/or response bodies.
5.2.2.6 Type: ListCollection

List of lists

This data type is defined in the [Addressbook TS 1.0].sect. 5.2.2.4, and reused by CAB APIs.

5.2.2.7 Type: List

List of identities

This data type is defined in the [Addressbook TS 1.0].sect. 5.2.2.5, and reused by CAB APIs, which further specify a pre-defined enumeration value of “CABSubscriptionList” for the listId, allocated to the CAB subscription-list. The List data type is reused by CAB APIs with the following clarifications:

<table>
<thead>
<tr>
<th>Element</th>
<th>Type</th>
<th>Optional</th>
<th>Description</th>
<th>Defined in</th>
<th>Reuse or extended use description</th>
</tr>
</thead>
<tbody>
<tr>
<td>listId</td>
<td>xsd:anyURI</td>
<td>Yes</td>
<td>As defined in [Addressbook TS 1.0]. Contains a relative URI representing the list identity (e.g. “friends”).</td>
<td>[Addressbook TS 1.0]</td>
<td>Element unchanged. Reused for CAB subscription-list, which SHALL have the pre-defined listId of “CABSubscriptionList”, added as a new enumeration value in this specification.</td>
</tr>
<tr>
<td>memberCollection</td>
<td>MemberCollection</td>
<td>Yes</td>
<td>As defined in [Addressbook TS 1.0]. Members in the list.</td>
<td>[Addressbook TS 1.0]</td>
<td>Element unchanged. Reused for CAB APIs, for the collection of subscription-list entries.</td>
</tr>
<tr>
<td>attributeList</td>
<td>AttributeList</td>
<td>Yes</td>
<td>As defined in [Addressbook TS 1.0]. Contains a list of attributes related to a list.</td>
<td>[Addressbook TS 1.0]</td>
<td>N/A Element not used for CAB APIs (subscription-list has no attributes).</td>
</tr>
</tbody>
</table>

A root element named list of type List is allowed in response bodies.

5.2.2.8 Type: MemberCollection

Collection of members that are part of a list (entries in CAB Subscription-list)

This data type is defined in the [Addressbook TS 1.0].sect. 5.2.2.8, and it is used unchanged by CAB APIs for the subscription-list collection of entries.

5.2.2.9 Type: Member

Individual member information in a list
This data type is defined in the [Addressbook TS 1.0].sect. 5.2.2.9, and it is used unchanged by CAB APIs for the subscription-list <entry> elements, with the following clarifications:

<table>
<thead>
<tr>
<th>Element</th>
<th>Type</th>
<th>Optional</th>
<th>Description</th>
<th>Defined in</th>
<th>Reuse or extended use description</th>
</tr>
</thead>
<tbody>
<tr>
<td>memberId</td>
<td>xsd:anyURI</td>
<td>Yes</td>
<td>As defined in [Addressbook TS 1.0]. Contains an identifier of a single member (e.g. ‘sip’ URI, ‘tel’ URI, ‘acr’ URI).</td>
<td>[Addressbook TS 1.0]</td>
<td>Element unchanged. Reused for CAB subscription-list, equivalent to the ‘id’ attribute of the &lt;entry&gt;element of subscription-list.</td>
</tr>
<tr>
<td>attributeList</td>
<td>AttributeList</td>
<td>Yes</td>
<td>As defined in [Addressbook TS 1.0]. Contains a list of attributes (e.g. filter-set) related to a member.</td>
<td>[Addressbook TS 1.0]</td>
<td>Element unchanged. Reused for CAB APIs for the attributes of an &lt;entry&gt; in the &lt;subscription-list&gt;, such as the filter-set.</td>
</tr>
</tbody>
</table>

### 5.2.2.10 Type: ListReferenceCollection

List of references to other lists

This data type is defined in the [Addressbook TS 1.0].sect. 5.2.2.10, and it is used unchanged by CAB APIs for the subscription-list <entry> elements that contain an XUI of a list.

### 5.2.2.11 Type: AbChangesSubscriptionCollection

Collection of subscriptions to notifications of changes in contacts, profile or CABSubscriptionList.

This data type is defined in the [Addressbook TS 1.0] , sect 5.2.2.11 “Type: AbChangesSubscriptionCollection“ and it is used in CAB APIs to create subscriptions to one of:
- a user’s “profile” data changes,
- a CAB User’s subscription-list changes, and
- a user’s Address Book (AB) changes.

<table>
<thead>
<tr>
<th>Element</th>
<th>Type</th>
<th>Optional</th>
<th>Description</th>
<th>Defined in</th>
<th>Reuse or extended use description</th>
</tr>
</thead>
<tbody>
<tr>
<td>abChangesSubscription</td>
<td>AbChangesSubscription [0..unbounded]</td>
<td>Yes</td>
<td>Contains a list of subscriptions related to contacts changes and/or list changes.</td>
<td>[Addressbook TS 1.0]</td>
<td>Element unchanged. Reused for CAB AB.</td>
</tr>
</tbody>
</table>
A root element named abChangesSubscriptionCollection of type AbChangesSubscriptionCollection is allowed in response bodies.

### 5.2.2.12 Type: AbChangesSubscription

This data type is defined in the [Addressbook TS 1.0], sect 5.2.2.12 “Type: AbChangesSubscription” and it is used in CAB APIs to realize subscriptions to:

- a user’s “profile” data changes,
- a CAB User’s subscription-list changes, and
- a user’s Address Book (AB) changes.

The following "profile" extension is added to the reused "AbChangesSubscription” data type definition from [Addressbook TS 1.0], and additional clarifications on the reuse and usage in CAB APIs of the existing structure for “anyContacts” and “ListId” is made as follows:

<table>
<thead>
<tr>
<th>Element</th>
<th>Type</th>
<th>Optional</th>
<th>Description</th>
<th>Defined in</th>
<th>Reuse or extended use description</th>
</tr>
</thead>
<tbody>
<tr>
<td>anyContacts</td>
<td>empty</td>
<td>Choice</td>
<td>Indicates a subscription for changes about any contacts in the ContactCollection.</td>
<td>[Addressbook TS 1.0]</td>
<td>Element unchanged. Reused for CAB AB.</td>
</tr>
<tr>
<td>profile</td>
<td>empty</td>
<td>Choice</td>
<td>Indicates a subscription for changes about the user’s profile (e.g. CAB PCC).</td>
<td>CAB APIs TS 1.0</td>
<td>Added in CAB APIs TS 1.0</td>
</tr>
<tr>
<td>listId</td>
<td>xsd:anyURI</td>
<td>Choice</td>
<td>Indicates a subscription for changes about the specified list.</td>
<td>[Addressbook TS 1.0]</td>
<td>Element unchanged. Reused for the CAB subscription-list.</td>
</tr>
</tbody>
</table>

### 5.2.2.13 Type: AbChangeNotification

This data type is defined in the [Addressbook TS 1.0], sect 5.2.2.13 “Type: AbChangeNotification” and it is used in CAB APIs to generate notifications in the following cases:

- a contact is added to the contact collection
- contact is removed from the contact collection- profile is removed from the profile collection
- attribute related to the profile or a contact is updated (attribute added, attribute value updated or attribute removed)
- changes occurred in the CAB User’s subscription-list (contact added, contact removed).
- to indicate that the subscription has been terminated by the server.
  (ResourceStatus=TerminatedTimeout/TerminatedNoResource/TerminatedOther)
The following extensions are added to the reused AbChangesNotifications data type definition from [Addressbook TS 1.0]:

<table>
<thead>
<tr>
<th>Element</th>
<th>Type</th>
<th>Optional</th>
<th>Description</th>
<th>Defined in</th>
<th>Reuse or extended use description</th>
</tr>
</thead>
<tbody>
<tr>
<td>link</td>
<td>common: Link</td>
<td>No</td>
<td>SHALL contain reference to the added or updated member or contact (rel=&quot;Member&quot; or rel=&quot;Contact&quot; respectively). A notification MAY include several links for each member or contact. SHALL contain reference to the list in case a member or contact has been removed (rel=&quot;List&quot; or rel=&quot;ContactCollection&quot; respectively). SHALL contain reference to the profile if it has been updated (rel=Profile) SHALL contain reference to the profile collection in case a profile has been removed (rel=&quot;ProfileCollection&quot;) SHALL contain reference to the subscription (rel=&quot;AbChangesSubscription&quot;) if resourceStatus is ‘Active’.</td>
<td>[Addressbook TS 1.0]</td>
<td>Element updated. Added “profile” support (e.g. CAB PCC).</td>
</tr>
</tbody>
</table>

A root element named abChangeNotification of type AbChangeNotification is used by server in the POST request to the client informing it about change in the profile/list that client is monitoring (using one of the subscriptions).

### 5.2.2.14 Type: ProfileCollection

Collection of user’s Profile data such as the CAB PCC (in different format, from different sources)

<table>
<thead>
<tr>
<th>Element</th>
<th>Type</th>
<th>Optional</th>
<th>Description</th>
<th>Defined in</th>
<th>Reuse or extended use description</th>
</tr>
</thead>
<tbody>
<tr>
<td>profile</td>
<td>Profile</td>
<td>Yes</td>
<td>Contains a list of user’s profiles.</td>
<td>CAB APIs TS 1.0.</td>
<td>Added in CAB APIs TS 1.0.</td>
</tr>
<tr>
<td>resourceURL</td>
<td>xsd:anyURI</td>
<td>No</td>
<td>Self referring URL</td>
<td>CAB APIs TS 1.0.</td>
<td>Element replicated from [Addressbook TS 1.0].</td>
</tr>
</tbody>
</table>

A root element named profileCollection of type ProfileCollection is allowed in response bodies.

### 5.2.2.15 Type: Profile

User’s individual Profile
<table>
<thead>
<tr>
<th>Element</th>
<th>Type</th>
<th>Optional</th>
<th>Description</th>
<th>Defined in</th>
<th>Reuse or extended use description</th>
</tr>
</thead>
<tbody>
<tr>
<td>profileId</td>
<td>xsd:anyURI</td>
<td>Yes</td>
<td>Contains a relative URI of the profile (e.g. “AlicePCC”). The element is mandatory when used inside ‘ProfileCollection’ type. It is a key property of the element and SHALL NOT be altered when included in the Light-weight Resource URL. If included, and if profileId is also part of the request URL, the two MUST have the same value.</td>
<td>CAB APIs TS 1.0.</td>
<td>Added in CAB APIs TS 1.0.</td>
</tr>
<tr>
<td>attributeList</td>
<td>AttributeList</td>
<td>Yes</td>
<td>Contains a list of attributes related to a profile,</td>
<td>[Addressbook TS 1.0]</td>
<td>Element unchanged. Reused for CAB APIs.</td>
</tr>
<tr>
<td>xcapNodeSelector</td>
<td>xsd:anyURI</td>
<td>Yes</td>
<td>Contains the XCAP node selector to an XML node (e.g. the Profile (PCC)).</td>
<td>CAB APIs TS 1.0</td>
<td>Added in CAB APIs TS 1.0.</td>
</tr>
</tbody>
</table>

A root element named profile of type Profile is allowed in request and/or response bodies.

### 5.2.2.16 Type: ApplicableToProfile

Profile the rule applies to

<table>
<thead>
<tr>
<th>Element</th>
<th>Type</th>
<th>Optional</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>profileId</td>
<td>xsd:anyURI [0..unbounded]</td>
<td>Choice</td>
<td>The rule applies to the specified list of ‘profileId’ that are part of the ‘ProfileCollection’.</td>
</tr>
<tr>
<td>allProfiles</td>
<td>(empty)</td>
<td>Choice</td>
<td>The rule applies to all profiles.</td>
</tr>
</tbody>
</table>

XSD modelling uses an optional “choice” to select either profileId or allProfiles.
5.2.2.17 **Type: ApplicableToProfileNode**

Profile XML node(s) the rule applies to

<table>
<thead>
<tr>
<th>Element</th>
<th>Type</th>
<th>Optional</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>profileId</td>
<td>xsd:anyURI [0..unbounded]</td>
<td>No</td>
<td>The rule applies to the specified ‘profileId’.</td>
</tr>
<tr>
<td>xcapNodeSelector</td>
<td>xsd:anyURI [0..unbounded]</td>
<td>Choice</td>
<td>The rule applies to the specified list of ‘xcapNodeSelector’ that are part of the ‘Profile’.</td>
</tr>
<tr>
<td>contactView</td>
<td>xsd:string</td>
<td>Choice</td>
<td>The rule applies to the listed Contact View(s). Multiple values are delimited by separator.</td>
</tr>
</tbody>
</table>

XSD modelling uses an optional “choice” to select either xcapNodeSelector or contactView, or both.

5.2.2.18 **Type: ApplicableToContacts**

Contacts the rule applies to, as defined in the [Addressbook TS 1.0], sect 5.2.2.16 “Type:ApplicableToContacts”.

5.2.2.19 **Type: ExternalRequestCollection**

<table>
<thead>
<tr>
<th>Element</th>
<th>Type</th>
<th>Optional</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>externalRequest</td>
<td>ExternalRequest [0..unbounded]</td>
<td>Yes</td>
<td>Contains a list of external requests.</td>
</tr>
<tr>
<td>resourceURL</td>
<td>xsd:anyURI</td>
<td>No</td>
<td>Self referring URL.</td>
</tr>
</tbody>
</table>

A root element named externalRequestCollection of type ExternalRequestCollection is allowed in response bodies.

5.2.2.20 **Type: ExternalRequest**

<table>
<thead>
<tr>
<th>Element</th>
<th>Type</th>
<th>Optional</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>importNonCAB</td>
<td>empty</td>
<td>Choice</td>
<td>Indicates the request is an import of a non-CAB Address Book contacts</td>
</tr>
<tr>
<td>importProfile</td>
<td>empty</td>
<td>Choice</td>
<td>Indicates the request is an import of Profile data from 3rd Party.</td>
</tr>
<tr>
<td>exportProfile</td>
<td>empty</td>
<td>Choice</td>
<td>Indicates the request is an export of PCC data to a 3rd Party profile.</td>
</tr>
<tr>
<td>subscribeProfile</td>
<td>empty</td>
<td>Choice</td>
<td>Indicates the request is subscription to CAB User’s personal profile information in 3rd party system</td>
</tr>
<tr>
<td>nonCABSource</td>
<td>xsd:string</td>
<td>No</td>
<td>element indicating the source (e.g. domain name) of the external system</td>
</tr>
<tr>
<td>scheduledInterval</td>
<td>xsd:int</td>
<td>No</td>
<td>Number of hours between the successive exchanges with external system. It shall be set to '0' in case of subscription to CAB User’s personal profile information in 3rd party system, or in case of a single request not intended for periodic repetition</td>
</tr>
<tr>
<td>username</td>
<td>xsd:string</td>
<td>Yes</td>
<td>User name that is used to access the external system. The use of username and password is one of the alternatives to</td>
</tr>
<tr>
<td>Element</td>
<td>Type</td>
<td>Required</td>
<td>Description</td>
</tr>
<tr>
<td>--------------</td>
<td>---------------------</td>
<td>----------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>password</td>
<td>xsd:string</td>
<td>Yes</td>
<td>Password that is used to access the external system. The use of username and password is one of the alternatives to access the external system.</td>
</tr>
<tr>
<td>token</td>
<td>xsd:string</td>
<td>Yes</td>
<td>A token that is used to access the external system. The use of a token is one of the alternatives to access the external system.</td>
</tr>
<tr>
<td>filterSet</td>
<td>filter:filter-set</td>
<td>Yes</td>
<td>Filter to be applied to the imported/exported/subscribed Profile data. This element may be present in import-Profile, export-Profile and subscribe-Profile operations, and it is defined in [OMA XDM Core] and [RFC4661].</td>
</tr>
<tr>
<td>clientCorrelator</td>
<td>xsd:string</td>
<td>Yes</td>
<td>A correlator that the client can use to tag this particular resource representation during a request to create a resource on the server.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>This field SHOULDN'T be present. Note: this allows the client to recover from communication failures during resource creation and therefore avoids re-sending the message in such situations.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>In case the field is present, the server SHALL not alter its value, and SHALL provide it as part of the representation of this resource. In case the field is not present, the server SHALL NOT generate it.</td>
</tr>
<tr>
<td>applicationTag</td>
<td>xsd:string</td>
<td>Yes</td>
<td>A tag that the client MAY use to tag this particular resource on the server. In case the field is present, the server SHALL not alter its value, and SHALL provide it as part of the representation of this resource. In case the field is not present, the server SHALL NOT generate it.</td>
</tr>
<tr>
<td>resourceURL</td>
<td>xsd:anyURI</td>
<td>Yes</td>
<td>Self referring URL.</td>
</tr>
</tbody>
</table>

A single element from the choice of elements describing the type of External Request (importNonCAB, importProfile, exportProfile, subscribeProfile) SHALL be conveyed in elements of type ExternalRequest.

A root element named externalRequest of type ExternalRequest is allowed in request and/or response bodies.

### 5.2.3 Enumerations

The subsections of this section define the enumerations used in this RESTful CAB API.

#### 5.2.3.1 Enumeration: ListType

Enumeration of types of lists.

This enumeration is defined in [Addressbook TS 1.0] sect. 5.2.3.1 and it is reused and extended by CAB APIs with the following new enumeration value:

<table>
<thead>
<tr>
<th>Enumeration</th>
<th>Description</th>
<th>Defined in</th>
<th>Reuse or extended use description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CABSubscriptionList</td>
<td>Indicates that this list is used for CAB subscription-list, needed for ContactSubscription.</td>
<td>CAB APIs TS 1.0</td>
<td>Extension defined by CAB APIs.</td>
</tr>
</tbody>
</table>
5.2.3.2  Enumeration: ResourceStatus

Enumeration of possible status of a subscription

This enumeration is defined in [Addressbook TS 1.0] sect. 5.2.3.2 and it is reused by CAB APIs.

5.2.4  Values of the Link “rel” attribute

The “rel” attribute of the Link element is a free string set by the server implementation, to indicate a relationship between the current resource and an external resource. The following are possible strings specific for CAB API on top of the ones defined in [Addressbook TS 1.0] (list is non-exhaustive, and can be extended):

- Profile
- ProfileCollection

These values indicate the kind of resource that the link points to.

5.3  Sequence Diagrams

The following subsections describe the resources, methods and steps involved in typical scenarios.

5.3.1  Managing contacts in a flat list

Refer to the flow described in [Addressbook TS 1.0] sect. 5.3.1.

5.3.2  Accessing the lists and members

Refer to the flow described in [Addressbook TS 1.0] sect. 5.3.2

5.3.3  Subscribing to address book changes and receiving notifications

Refer to the flow described in [Addressbook TS 1.0] sect. 5.3.3.

5.3.4  Managing authorization rules

Refer to the flow described in [Addressbook TS 1.0] sect. 5.3.5.
6. Detailed specification of the resources

The following applies to all resources defined in this specification regardless of the representation format (i.e. XML, JSON, application/x-www-form-urlencoded):

- Reserved characters in URL variables (parts of a URL denoted below by a name in curly brackets) MUST be percent-encoded according to [RFC3986]. Note that this always applies, no matter whether the URL is used as a Request URL or inside the representation of a resource (such as in “resourceURL” and “link” elements).

- If a user identifier (e.g. address, userId, etc) of type anyURI is in the form of an MSISDN, it MUST be defined as a global number according to [RFC3966] (e.g. tel:+19585550100). The use of characters other than digits and the leading “+” sign SHOULD be avoided in order to ensure uniqueness of the resource URL. This applies regardless of whether the user identifier appears in a URL variable or in a parameter in the body of an HTTP message.

- If a user identifier (e.g. address, userId, etc) of type anyURI is in the form of an Anonymous Customer Reference (ACR), it MUST be defined according to [IETF_ACR_draft], i.e. it MUST include the protocol prefix ‘acr:’ followed by the ACR.
  - The ACR ‘auth’ is a supported reserved keyword, and MUST NOT be assigned as an ACR to any particular end user. See [Addressbook TS 1.0] Appendix G.1.2 for details regarding the use of this reserved keyword.

- For requests and responses that have a body, the following applies: in the requests received, the server SHALL support JSON and XML encoding of the parameters in the body, and MAY support application/x-www-form-urlencoded parameters in the body. The Server SHALL return either JSON or XML encoded parameters in the response body, according to the result of the content type negotiation as specified in [REST_NetAPI_Common]. In notifications to the Client, the server SHALL use either XML or JSON encoding, depending on which format the client has specified in the related subscription. The generation and handling of the JSON representations SHALL follow the rules for JSON encoding in HTTP Requests/Responses as specified in [REST_NetAPI_Common].

6.1 Resource: Collection of contacts

The resource used is:

http://{serverRoot}/addressbook/{apiVersion}/{userId}/contacts

and it is specified within [Addressbook TS 1.0] sect.6.1.

6.2 Resource: Individual contact

The resource used is:

http://{serverRoot}/addressbook/{apiVersion}/{userId}/contacts/{contactId}

and it is specified within [Addressbook TS 1.0] sect.6.2.

6.3 Resource: Attributes for a contact

The resource used is:

http://{serverRoot}/addressbook/{apiVersion}/{userId}/contacts/{contactId}/attributes

and it is specified within [Addressbook TS 1.0] sect.6.3.
6.4 Resource: Individual attribute for a contact

The resource used is:

http://{serverRoot}/addressbook/{apiVersion}/{userId}/contacts/{contactId}/attributes/{ResourceRelPath}

and it is specified within [Addressbook TS 1.0] sect.6.4.

6.5 Resource: Lists

The resource used is:

http://{serverRoot}/addressbook/{apiVersion}/{userId}/lists

This resource is used to retrieve all lists belonging to a user and it is specified within [Addressbook TS 1.0] sect.6.5.

6.6 Resource: Individual list

The resource used is:

http://{serverRoot}/addressbook/{apiVersion}/{userId}/lists/{listId}

and it is specified within [Addressbook TS 1.0] sect.6.6. This is used in CAB APIs for the CAB subscription-list.

6.7 Resource: Members in a list

The resource used is:

http://{serverRoot}/addressbook/{apiVersion}/{userId}/lists/{listId}/members

and it is specified within [Addressbook TS 1.0] sect.6.9. This is used in CAB APIs for the retrieval of entries in a CAB User’s subscription-list.

6.8 Resource: Individual member in a list

The resource used is:

http://{serverRoot}/addressbook/{apiVersion}/{userId}/lists/{listId}/members/{memberId}

and it is specified within [Addressbook TS 1.0] sect.6.10. This is used in CAB APIs for the management of entries in the CAB User’s subscription-list.

6.9 Resource: Attributes for a member in a list

The resource used is:

http://{serverRoot}/addressbook/{apiVersion}/{userId}/lists/{listId}/members/{memberId}/attributes

and it is specified within [Addressbook TS 1.0] sect.6.11. This is used in CAB APIs to retrieve all attributes of entries in the CAB User’s subscription-list (e.g. all filter-set).

6.10 Resource: Individual attribute for a member in a list

The resource used is:

http://{serverRoot}/addressbook/{apiVersion}/{userId}/lists/{listId}/members/{memberId}/attributes/{ResourceRelPath}
and it is specified within [Addressbook TS 1.0] sect.6.12. This is used in CAB APIs to manage the attributes of entries in the CAB User’s subscription-list (e.g. the filter-set).

### 6.11 Resource: List references

The resource used is:

```
http://{serverRoot}/addressbook/{apiVersion}/{userId}/lists/{listId}/listReferences
```

and it is specified within [Addressbook TS 1.0] sect.6.13.

### 6.12 Resource: Individual list reference

The resource used is:

```
http://{serverRoot}/addressbook/{apiVersion}/{userId}/lists/{listId}/listReferences/{ResourceRelPath}
```

and it is specified within [Addressbook TS 1.0] sect.6.14.

### 6.13 Resource: Address Book changes subscriptions

The resource used is:

```
http://{serverRoot}/addressbook/{apiVersion}/{userId}/subscriptions/abChanges
```

and it is specified within [Addressbook TS 1.0] sect.6.15, with additional CAB APIs extensions specified in sect. 5.2.2.1. This resource is used to retrieve and to create new subscriptions to any one of the following:

- a user’s “profile” data changes,
- a CAB User’s subscription-list changes, and
- a user’s Address Book (AB) changes.

### 6.14 Resource: Individual list changes subscription

The resource used is:

```
http://{serverRoot}/addressbook/{apiVersion}/{userId}/subscriptions/abChanges/{subscriptionId}
```

and it is specified within [Addressbook TS 1.0] sect.6.16, with additional CAB APIs extensions specified in sect. 5.2.2.1. This resource is used to retrieve or remove subscriptions to any one of the following:

- a user’s “profile” data changes,
- a CAB User’s subscription-list changes, and
- a user’s Address Book (AB) changes.

### 6.15 Resource: Client resource for list changes notifications

The resource is specified within [Addressbook TS 1.0] sect.6.17 and it is a callback URL provided by the client for notification about outbound message delivery status.
A notification SHALL be generated by the system exposing the CAB APIs for all events specified in [Addressbook TS 1.0] table in sect. 6.17, with the following additions and clarifications:

<table>
<thead>
<tr>
<th>Type of notification</th>
<th>Value of ResourceStatus</th>
<th>Generated in the following occasions:</th>
<th>Defined in</th>
<th>Reuse or extended use description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Update profile</td>
<td>Active</td>
<td>A profile or attributes of a profile were added, profile attribute(s) value updated or profile attribute value removed.</td>
<td>CAB APIs 1.0</td>
<td>Added in CAB APIs TS 1.0</td>
</tr>
<tr>
<td>Remove profile</td>
<td>Active</td>
<td>A profile was removed.</td>
<td>CAB APIs 1.0</td>
<td>Added in CAB APIs TS 1.0</td>
</tr>
<tr>
<td>Update contact collection or list attributes</td>
<td>Active</td>
<td>A contact collection's attributes are updated (attribute added, changed or removed).</td>
<td>[Addressbook TS 1.0] The list attributes are not supported for CAB APIs.</td>
<td></td>
</tr>
</tbody>
</table>

### 6.16 Resource: Collection of Profiles

The resource used is:

http://{serverRoot}/addressbook/{apiVersion}/{userId}/profile

This resource is used to retrieve a flat list of all profiles, and/or sub-structures of a profile owned by a given user.

#### 6.16.1 Request URL variables

The following request URL variables are common for all HTTP methods:

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>serverRoot</td>
<td>Server base url: hostname+port+base path. Port and base path are OPTIONAL. Example: <a href="http://example.com/exampleAPI">http://example.com/exampleAPI</a></td>
</tr>
<tr>
<td>apiVersion</td>
<td>Version of the API clients want to use. The value of this variable is defined in section 5.1.</td>
</tr>
<tr>
<td>userId</td>
<td>User identifier. Examples: tel:+19585550100, acr:pseudonym123</td>
</tr>
</tbody>
</table>

See section 6 for a statement on the escaping of reserved characters in URL variables.

#### 6.16.2 Response Codes and Exceptions

For HTTP response codes, see [REST_NetAPI_Common].

For Policy Exception and Service Exception fault codes applicable to Restful CAB APIs, see section 7.

#### 6.16.3 GET

This resource is used to retrieve a list of profiles and/or sub-structures of a profile owned by a given user.

### 6.16.3.1 Example 1: Retrieve all profiles (Informative)

#### 6.16.3.1.1 Request

GET /exampleAPI/addressbook/v1/sip%3Amaria%40example.com/profile?resFormat=XML&indivFilter=Profile HTTP/1.1
Accept: application/xml
Host: example.com

6.16.3.1.2 Response

HTTP/1.1 200 OK
Date: Fri, 03 Feb 2012 12:51:59 GMT
Content-Type: application/xml
Content-Length: nnnn

<?xml version="1.0" encoding="UTF-8"?>

<attribute>
6.16.4 PUT

Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: GET’ field in the response as per section 14.7 of [RFC 2616].

6.16.5 POST

Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: GET’ field in the response as per section 14.7 of [RFC 2616].

6.16.6 DELETE

Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: GET’ field in the response as per section 14.7 of [RFC 2616].

6.17 Resource: Individual profile

The resource used is:

http://{serverRoot}/addressbook/{apiVersion}/{userId}/profile/{profileId}

This resource is used to retrieve, create, update or delete individual profile from the collection of profiles of a given user.

6.17.1 Request URL variables

The following request URL variables are common for all HTTP methods:

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>serverRoot</td>
<td>Server base url: hostname+port+base path. Port and base path are OPTIONAL. Example: example.com/exampleAPI</td>
</tr>
<tr>
<td>apiVersion</td>
<td>Version of the API client wants to use. The value of this variable is defined in section 5.1.</td>
</tr>
<tr>
<td>Name</td>
<td>Type/Values</td>
</tr>
<tr>
<td>---------</td>
<td>-------------</td>
</tr>
<tr>
<td>indivFilter</td>
<td>xsd:string</td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>

### 6.17.3 GET

This resource is used to retrieve individual profile data from a list of profiles available for a given user. The data is retrieved as an opaque XML object.

Supported parameters in the query string of the Request URL are:

GET /org.openmobilealliance.cab-pcc/users/sip%3Amaria%40example.com/pcc/mariaPCC?indivFilter=XMLObj HTTP/1.1
Accept: application/xml
Host: example.com

### 6.17.2 Response Codes and Exceptions

For HTTP response codes, see [REST_NetAPI_Common].

For Policy Exception and Service Exception fault codes applicable to the RESTful CAB API, see section 7.
6.17.4 PUT

This operation is used to create or update a profile.

6.17.4.1 Example: Update an existing profile as an XML object (Informative)

The PUT example shows how a node in the profile is updated, the entire XML object is handled as a blob.

6.17.4.1.1 Request

PUT /org.openmobilealliance.cab-pcc/users/sip%3Amaria%40example.com/profile/mariaPCC/attributes/pcc%5B@pcc-type=%22indivi

dual%22/~/pcc/person-details%5B@index=%22gt4fd890bu8%22%5D/address/address-entry%5B@index=%22dasfdhas%22%5D%5B@addr-type=%22Work%22%5D/location/timezone/tz-url

HTTP/1.1
Accept: application/xml
Host: example.com
Content-Type: application/xml
Content-Length: nnnn

<?xml version="1.0" encoding="UTF-8"?>
xsi:schemaLocation="urn:oma:xml:rest:netapi:cab:1 http://www.openmobilealliance.org/tech/profiles/rest_netapi_convergedaddressbook-v1_0.xsd"

  </resourceURL>
</cab:profile>

6.17.4.1.2 Response

HTTP/1.1 200 OK
Date: Fri, 10 Dec 2010 12:51:59 GMT
Location: http://example.com/org.openmobilealliance.cab-pcc/users/sip%3Amaria%40example.com/profile/mariaPCC/attributes/pcc%5B@pcc-
    type=%22individual%22/~/pcc/person-details%5B@index=%22gt4fd890bu8%22%5D/address/address-entry%5B@index=%22dasfdhas%22%5D%5B@addr-type=%22Work%22%5D/location/timezone/tz-url

Content-Type: application/xml
6.17.4.2 Example: Update attributes of an existing profile using “Profile” (Informative)

The PUT example shows how a node in the profile is updated, using the “Profile” option and a value containing the XML data compliant with CAB PCC [CAB XDMS].

6.17.4.2.1 Request

```
PUT /exampleAPI/addressbook/v1/sip%3Amaria%40example.com/profile/mariaPCC HTTP/1.1
Accept: application/xml

            </pcc>
        </attribute>
    </attributeList>
</cab:profile>
6.17.5 POST

Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: 'GET, PUT, DELETE’ field in the response as per section 14.7 of [RFC 2616].

6.17.6 DELETE

This operation deletes a profile.

6.17.6.1 Example: Delete a profile

6.17.6.1.1 Request

DELETE /org.openmobilealliance.cab-pcc/users/sip%3Amaria%40example.com/profile/mariaPCC HTTP/1.1
Accept: application/xml
Host: example.com

6.17.6.1.2 Response

HTTP/1.1 204 No Content
Date: Fri, 10 Dec 2010 12:53:23 GMT
6.18 Resource: Attributes of a profile

The resource used is:

http://{serverRoot}/addressbook/{apiVersion}/{userId}/profile/{profileId}/attributes

This resource is used to retrieve all attributes for a profile.

6.18.1 Request URL variables

The following request URL variables are common for all HTTP methods:

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>serverRoot</td>
<td>Server base url: hostname+port+base path. Port and base path are OPTIONAL. Example: example.com/exampleAPI</td>
</tr>
<tr>
<td>apiVersion</td>
<td>Version of the API client wants to use. The value of this variable is defined in section 5.1.</td>
</tr>
<tr>
<td>userId</td>
<td>User identifier. Examples: sip:<a href="mailto:maria@example.com">maria@example.com</a></td>
</tr>
<tr>
<td>profileId</td>
<td>Profile identifier. Example: mariaPCC</td>
</tr>
</tbody>
</table>

See section 6 for a statement on the escaping of reserved characters in URL variables.

6.18.2 Response Codes and Exceptions

For HTTP response codes, see [REST_NetAPI_Common].

For Policy Exception and Service Exception fault codes applicable to the RESTful CAB API, see section 7.

6.18.3 GET

This operation is used for retrieval of all attributes of a profile for a given user identity.

6.18.3.1 Example: Retrieve all attributes of a profile (Informative)

Retrieve all attributes of a profile belonging to a user, and return result in XML format, using resFormat parameter in URL. The attributes of a profile are Person-Details, Org-Details and Group-Details, This example contains a profile that only has one Person-Details and 0 Org-Details and 0 Group-Details.

6.18.3.1.1 Request

GET /exampleAPI/addressbook/v1/sip%3Amaria%40example.com/profile/mariaPCC/attributes?resFormat=XML HTTP/1.1
Accept: application/xml
Host: example.com

6.18.3.1.2 Response

HTTP/1.1 200 OK
Date: Fri, 10 Dec 2010 12:51:59 GMT
Content-Type: application/xml
Content-Length: nnnn

  </person-details>
</pcc>
6.18.4 PUT

Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: GET’ field in the response as per section 14.7 of [RFC 2616].

6.18.5 POST

Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: GET’ field in the response as per section 14.7 of [RFC 2616].

6.18.6 DELETE

Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: GET’ field in the response as per section 14.7 of [RFC 2616].

6.19 Resource: Individual attribute for a profile

The resource used is:

http://{serverRoot}/addressbook/{apiVersion}/{userId}/profile/{profileId}/attributes/[ResourceRelPath]

This Light-weight Resource is used to manage attributes for a profile, which include creation, retrieval, update and delete operations.

6.19.1 Request URL variables

The following request URL variables are common for all HTTP methods:

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>serverRoot</td>
<td>Server base url: hostname+port+base path. Port and base path are OPTIONAL. Example: example.com/exampleAPI</td>
</tr>
<tr>
<td>apiVersion</td>
<td>Version of the API client wants to use. The value of this variable is defined in section 5.1.</td>
</tr>
<tr>
<td>userId</td>
<td>User identifier. Examples: sip: <a href="mailto:maria@example.com">maria@example.com</a></td>
</tr>
<tr>
<td>profileId</td>
<td>Contact identifier. Example: mariaPCC</td>
</tr>
<tr>
<td>[ResourceRelPath]</td>
<td>Light-weight relative resource path. The allowed string for this Light-weight Resource is {name}, as defined in the [ResourceRelPath] column in table 5.2.2.6. {name} indicates the name of the attribute. Example: xcapNodeSelector of the attribute tz-url of the CAB PCC.</td>
</tr>
</tbody>
</table>

See section 6 for a statement on the escaping of reserved characters in URL variables.
6.19.2 Response Codes and Exceptions

For HTTP response codes, see [REST_NetAPI_Common].

For Policy Exception and Service Exception fault codes applicable to the RESTful CAB API, see section 7.

6.19.3 GET

This operation is used for retrieval of a specific attribute value of a profile of a user, in this example the tz-url value.

6.19.3.1 Example: Retrieve a profile’s attribute (Informative)

6.19.3.1.1 Request

GET /exampleAPI/addressbook/v1/sip%3Amaria%40example.com/profile/mariaPCC/attributes/~~/pcc/person-details %5B@index=%22gt4fd890bu8%22%5D/address/address-entry%5B@index=%22dasfdhasl%22%5D%5B@addr-type=%22Work%22%5D/location/timezone/tz-url HTTP/1.1
Accept: application/xml
Host: example.com

6.19.3.1.2 Response

HTTP/1.1 200 OK
Date: Fri, 10 Dec 2010 12:51:59 GMT
Content-Type: application/xml
Content-Length: nnnn

<?xml version="1.0" encoding="UTF-8"?>
xsi:schemaLocation="urn:oma:xml:rest:netapi:addressbook:1 http://www.openmobilealliance.org/tech/profiles/rest_netapi_addressbook-v1_0.xsd">
  <name>Profile</name>
  <pcc pcc-type="individual" xmlns="urn:oma:xml:cab:pcc" xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance">
    <person-details index="gt4fd890bu8"/>
    <address>
      <address-entry index="dasfdhasl" addr-type="Work">
        <location>
          <time-zone>
            <tz-url>maps.com/1234</tz-url>
          </time-zone>
        </location>
      </address-entry>
    </address>
  </pcc>
</ab:attribute>
6.19.4 PUT

This operation is used for creation or update of an attribute of a profile. If successful, this SHALL also create or update the attribute for a user’s profile.

6.19.4.1 Example: Update an existing profile with new attribute (Informative)

The PUT example shows how a node in the profile is updated with the new value “maps.com” for the tz-url, using the “Profile” option and a value containing the XML data compliant with CAB PCC [CAB XDMS].

6.19.4.1.1 Request

```
PUT /exampleAPI/addressbook/v1/sip%3Amaria%40example.com/profile/mariaPCC/attributes/~~pcc%5D%5B@pcc-type=%22individual%22%5D%5B@index=%22gt4fd890bu8%22%5D/address/address-entry%5B@index=%22dasfdhasl%22%5D%5B@addr-type=%22Work%22%5D/location/timezone/tz-url
HTTP/1.1
Accept: application/xml
Host: example.com
Content-Type: application/xml
Content-Length: nnnn

<?xml version="1.0" encoding="UTF-8"?>
xsi:schemaLocation="urn:oma:xml:rest:netapi:addressbook:1 http://www.openmobilealliance.org/tech/profiles/rest_netapi_addressbook-v1_0.xsd">
  <name>Profile</name>
  <pcc pcc-type="individual" xmlns="urn:oma:xml:cab:pcc" xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance">
    <person-details index="gt4fd890bu8">
      <address>
        <address-entry index="dasfdhasl" addr-type="Work">
          <location>
            <time-zone>
              <tz-url>maps.com/1234</tz-url>
            </time-zone>
          </location>
        </address-entry>
      </address>
    </person-details>
  </pcc>
</ab:attribute>
```

6.19.4.1.2 Response

```
HTTP/1.1 200 OK
Date: Fri, 10 Dec 2010 12:51:59 GMT
Location:http://exampleAPI/addressbook/v1/sip%3Amaria%40example.com/profile/mariaPCC/attributes/~~pcc%5D%5B@pcc-type=%22individual%22%5D%5B@index=%22gt4fd890bu8%22%5D/address/address-entry%5B@index=%22dasfdhasl%22%5D%5B@addr-type=%22Work%22%5D/location/timezone/tz-url
```
6.19.5 POST

Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: ‘GET, PUT, DELETE’ field in the response as per section 14.7 of [RFC 2616].

6.19.6 DELETE

This operation deletes an attribute of a profile, the pcc:tz-url. If successful, this SHALL delete the attribute from the specific user’s profile.

6.19.6.1 Request

DELETEx/exampleAPI/addressbook/v1/sip%3Amaria%40example.com/profile/mariaPCC/attributes/%5B-pcc%5D%5B@pcc-
type=%22individual%22%5D%5B@index=%22gt4fd890bu8%22%5D/address/address-
entry%5B@index=%22dasfdhasl%22%5D%5B@addr-type=%22Work%22%5D/location/timezone/tz-url   HTTP/1.1

Accept: application/xml
Host: example.com

6.19.6.2 Response

HTTP/1.1 204 No Content
Date: Fri, 10 Dec 2010 12:53:23 GMT

6.20 Resource: Authorization rules

The resource used is:

http://{serverRoot}/addressbook/{apiVersion}/{userId}/authorizationRules

and it is specified within [Addressbook TS 1.0] sect.6.23.

This resource is used to retrieve rules for access to profile and contacts, as well as for the creation of new authorization rules.

6.21 Resource: Individual authorization rule

The resource used is:

http://{serverRoot}/addressbook/{apiVersion}/{userId}/authorizationRules/{ruleId}

and it is specified within [Addressbook TS 1.0] sect.6.24.

This resource is used to retrieve an individual authorization rule for access to profile or contacts.
6.22 Resource: Individual authorization rule data

The resource used is:

http://{serverRoot}/addressbook/{apiVersion}/{userId}/authorizationRules/{ruleId}/[ResourceRelPath]

and it is specified within [Addressbook TS 1.0] sect.6.25.

This resource is used to retrieve an individual authorization rule for access to profile or contacts.

This Light-weight Resource is used to manage authorized identities in an existing authorization rule, which include creation, update, retrieval, and delete operations.

6.23 Resource: Collection of External Requests

The resource used is:

http://{serverRoot}/addressbook/{apiVersion}/{userId}/externalRequest

This resource is used to retrieve the list of all active External Requests associated to a given user and to create new External Requests.

6.23.1 Request URL variables

The following request URL variables are common for all HTTP methods:

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>serverRoot</td>
<td>Server base url: hostname+port+base path. Port and base path are OPTIONAL.</td>
</tr>
<tr>
<td></td>
<td>Example: <a href="http://example.com/exampleAPI">http://example.com/exampleAPI</a></td>
</tr>
<tr>
<td>apiVersion</td>
<td>Version of the API clients want to use. The value of this variable is defined</td>
</tr>
<tr>
<td></td>
<td>in section 5.1.</td>
</tr>
<tr>
<td>userId</td>
<td>User identifier. Examples: tel:+19585550100, acr:pseudonym123</td>
</tr>
</tbody>
</table>

See section 6 of [Addressbook TS 1.0] for a statement on the escaping of reserved characters in URL variables.

6.23.2 Response Codes and Exceptions

For HTTP response codes, see [REST_NetAPI_Common].

For Policy Exception and Service Exception fault codes applicable to Restful CAB APIs, see section 7.

6.23.3 GET

This resource is used to retrieve the list of all active External Requests associated to a given user.

6.23.3.1 Example 1: Retrieve all External Requests (Informative)

6.23.3.1.1 Request

GET /exampleAPI/addressbook/v1/sip%3Amaria%40example.com/externalReq HTTP/1.1
Accept: application/xml
Host: example.com

6.23.3.1.2 Response

HTTP/1.1 200 OK
Date: Fri, 10 Feb 2012 12:51:59 GMT
Content-Type: application/xml
Content-Length: nnnn

<?xml version="1.0" encoding="UTF-8"?>
xsi:schemaLocation="urn:oma:xml:rest:netapi:cab:1 http://www.openmobilealliance.org/tech/profiles/rest_netapi_convergedaddressbook-v1_0.xsd">

</cab:externalRequest>

6.23.6 DELETE

Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: GET, POST’ field in the response as per section 14.7 of [RFC 2616].

6.24 Resource: Individual External Request

The resource used is:

http://{serverRoot}/addressbook/{apiVersion}/{userId}/externalRequest/{reqId}

This resource is used to retrieve, update or delete individual External Requests from the collection of External Requests of a given user.

6.24.1 Request URL variables

The following request URL variables are common for all HTTP methods:

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>serverRoot</td>
<td>Server base url: hostname+port+base path. Port and base path are OPTIONAL. Example: <a href="http://example.com/exampleAPI">http://example.com/exampleAPI</a></td>
</tr>
<tr>
<td>apiVersion</td>
<td>Version of the API clients want to use. The value of this variable is defined in section 5.1.</td>
</tr>
</tbody>
</table>
userld | User identifier. Examples: tel:+19585550100, acr:pseudonym123
reqId | External Request identifier. Example: externalReq12356

See section 6 of [Addressbook TS 1.0] for a statement on the escaping of reserved characters in URL variables.

### 6.24.2 Response Codes and Exceptions

For HTTP response codes, see [REST_NetAPI_Common].

For Policy Exception and Service Exception fault codes applicable to Restful CAB APIs, see section 7.

### 6.24.3 GET

This resource is used to retrieve an individual External Request.

#### 6.24.3.1 Example 1: Retrieve an individual External Request (Informative)

#### 6.24.3.1.1 Request

```
GET /exampleAPI/addressbook/v1/sip%3Amaria%40example.com/externalRequest/externalReq1234 HTTP/1.1
Accept: application/xml
Host: example.com
```

#### 6.24.3.1.2 Response

```
HTTP/1.1 200 OK
Date: Fri, 10 Feb 2012 12:51:59 GMT
Content-Type: application/xml
Content-Length: nnnn

<?xml version="1.0" encoding="UTF-8"?>
xsi:schemaLocation="urn:oma:xml:rest:netapi:cab:1 http://www.openmobilealliance.org/tech/profiles/rest_netapi_convergedaddressbook-v1_0.xsd">

  <resourceURL>http://example.com/exampleAPI/addressbook/v1/sip%3Amaria%40example.com/externalRequest/externalReq1234</resourceURL>
</cab:externalRequest>

6.24.5 POST

Method not allowed by the resource. The returned HTTP error status is 405. The server should also include the ‘Allow: GET, PUT, DELETE’ field in the response as per section 14.7 of [RFC 2616].

6.24.6 DELETE

This resource is used to delete an individual External Request.

6.24.6.1 Example 1: Delete an individual External Request (Informative)

6.24.6.1.1 Request

DELETE /exampleAPI/addressbook/v1/sip%3Amaria%40example.com/externalRequest/externalReq1234 HTTP/1.1
Accept: application/xml
Host: example.com
6.24.6.1.2 Response

HTTP/1.1 204 No Content
Date: Fri, 10 Feb 2012 12:53:23 GMT
7. **Fault definitions**

7.1 **Service Exceptions**

For common Service Exceptions refer to [REST_NetAPI_Common].

In addition, all Service Exception codes specified in [Addressbook TS 1.0] sect. 7 SHALL apply herein.

<td>This operation deletes an individual External Request - DELETE</td>
<td>6.24.6</td>
<td></td>
</tr>
</tbody>
</table>
Appendix C. Application/x-www-form-urlencoded Request Format for Selected REST Operations

This section defines a format for the CAB REST API requests where the body of the request is encoded using the application/x-www-form-urlencoded MIME type.

Note: only the request body is encoded as application/x-www-form-urlencoded, the response is still encoded as XML or JSON depending on the preference of the client and the capabilities of the server.

The encoding is defined below for all CAB REST operations which are based on POST requests. In addition to the encodings defined in the [Addressbook TS 1.0] Appendix C, the following apply to CAB APIs:

- Create a new external request

C.1 Create a new External Request

This operation is used for creating a new External Request, see section 6.19.5.

The request parameters are as follows:

<table>
<thead>
<tr>
<th>Name</th>
<th>Type/Values</th>
<th>Optional</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>importNonCAB</td>
<td>xsd:boolean</td>
<td>Choice</td>
<td>Indicates the request is an import of a non-CAB Address Book contacts</td>
</tr>
<tr>
<td>importProfile</td>
<td>xsd:boolean</td>
<td>Choice</td>
<td>Indicates the request is an import of Profile data from 3rd Party.</td>
</tr>
<tr>
<td>exportProfile</td>
<td>xsd:boolean</td>
<td>Choice</td>
<td>Indicates the request is an export of PCC data to a 3rd Party profile.</td>
</tr>
<tr>
<td>subscribeProfile</td>
<td>xsd:boolean</td>
<td>Choice</td>
<td>Indicates the request is subscription to CAB User’s personal profile information in 3rd party system</td>
</tr>
<tr>
<td>nonCABSource</td>
<td>xsd:string</td>
<td>No</td>
<td>element indicating the source (e.g. domain name) of the external system</td>
</tr>
<tr>
<td>scheduledInterval</td>
<td>xsd:int</td>
<td>No</td>
<td>Number of hours between the successive exchanges with external system. It shall be set to ‘0’ in case of subscription to CAB User’s personal profile information in 3rd party system, or in case of a single request not intended for periodic repetition</td>
</tr>
<tr>
<td>username</td>
<td>xsd:string</td>
<td>Yes</td>
<td>User name that is used to access the external system. The use of username and password is one of the alternatives to access the external system.</td>
</tr>
<tr>
<td>password</td>
<td>xsd:string</td>
<td>Yes</td>
<td>Password that is used to access the external system. The use of username and password is one of the alternatives to access the external system.</td>
</tr>
<tr>
<td>token</td>
<td>xsd:string</td>
<td>Yes</td>
<td>A token that is used to access the external system. The use of a token is one of the alternatives to access the external system.</td>
</tr>
<tr>
<td>filterSet</td>
<td>xsd:string</td>
<td>Yes</td>
<td>Filter to be applied to the imported/exported/subscribed Profile data. This element may be present in import-Profile, export-Profile and subscribe-Profile operations.</td>
</tr>
<tr>
<td>clientCorrelator</td>
<td>xsd:string</td>
<td>Yes</td>
<td>A correlator that the client can use to tag this particular resource representation during a request to create a resource on the server. This field SHOULD be present. Note: this allows the client to recover from communication failures during resource creation and therefore avoids re-sending the message in such situations. In case the field is present, the server SHALL not alter its value, and SHALL provide it as part of the representation of this resource. In case the field is not present, the server SHALL NOT generate it.</td>
</tr>
<tr>
<td>------------------</td>
<td>------------</td>
<td>-----</td>
<td>------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>applicationTag</td>
<td>xsd:string</td>
<td>Yes</td>
<td>A tag that the client MAY use to tag this particular resource on the server. In case the field is present, the server SHALL not alter its value, and SHALL provide it as part of the representation of this resource. In case the field is not present, the server SHALL NOT generate it.</td>
</tr>
</tbody>
</table>

</cab:externalRequest>
Appendix D. JSON examples (Informative)

JSON (JavaScript Object Notation) is a light-weight, text-based, language-independent data interchange format. It provides a simple means to represent basic name-value pairs, arrays and objects. JSON is relatively trivial to parse and evaluate using standard JavaScript libraries, and hence is suited for REST invocations from browsers or other processors with JavaScript engines. Further information on JSON can be found at [RFC 4627].

The following examples show the request and response for various operations using the JSON data format. The examples follow the XML to JSON serialization rules in [REST_NetAPI_Common]. A JSON response can be obtained by using the content type negotiation mechanism specified in [REST_NetAPI_Common].

For full details on the operations themselves please refer to the section number indicated.
Appendix E. Operations mapping to a pre-existing baseline specification (Informative)

As this specification does not have a baseline specification, this appendix is empty.
Appendix F. Light-weight Resources for CAB APIs (Informative)

The following table lists all CAB data structure elements that can be accessed individually as Light-weight Resources.

For each Light-weight Resource, the following information is provided: corresponding root element name, root element type and [ResourceRelPath] string.

All the Light-weight Resources specified in the [Addressbook TS 1.0] Appendix F apply.

Note: When appending [ResourceRelPath] string to its Heavy-weight Resource URL, all variables within curly brackets “{}” such as: serviceId, version, deviceId, watcherUserId, contactListId, and domainName have to be replaced by their real values.

In addition to the Light-weight Resources defined by the [Addressbook TS 1.0] Appendix F, the following new Light-weight Resources are specified by CAB APIs:

<table>
<thead>
<tr>
<th>Type of Light-weight Resources (and references to data structures)</th>
<th>Element/attribute that can be accessed as Light-weight Resource</th>
<th>Root element name for the Light-weight Resource</th>
<th>Root element type for the Light-weight Resource</th>
<th>[ResourceRelPath] string that needs to be appended to the corresponding Heavy-weight Resource URL</th>
</tr>
</thead>
<tbody>
<tr>
<td>Profile(5.2.2.15) xcapNodeSelector</td>
<td>xcapNodeSelector</td>
<td>profile</td>
<td>xsd:anyURI</td>
<td>profile/{xcapNodeSelector}</td>
</tr>
</tbody>
</table>

Table 8 Light-weight Resources for CAB APIs
Appendix G. Authorization aspects (Normative)

This appendix specifies how to use the RESTful Converged Address Book API in combination with some authorization frameworks.

G.1 Use with OMA Authorization Framework for Network APIs

The RESTful Converged Address Book API MAY support the authorization framework defined in [Autho4API_10], as specified in [Addressbook TS 1.0] Appendix G, with the clarifications and extensions added herein.

G.1.1 Scope values

G.1.1.1 Definitions

- The following clarifications and additions apply in addition to the [Addressbook TS 1.0] Appendix G.1.1:

<table>
<thead>
<tr>
<th>Scope value</th>
<th>Description</th>
<th>For one-time access token</th>
</tr>
</thead>
<tbody>
<tr>
<td>oma_rest_addressbook.profile</td>
<td>Provide access to all defined operations on profile.</td>
<td>No</td>
</tr>
<tr>
<td>oma_rest_addressbook.externalRequest</td>
<td>Provide access to all defined operations on lists.</td>
<td>No</td>
</tr>
</tbody>
</table>

Table 9 Scope values for RESTful Converged Address Book API

G.1.1.2 Downscoping

In the case where the client requests authorization for “oma_rest_addressbook.all_{apiVersion}” scope, the authorization server and/or resource owner MAY restrict the granted scope to some of the following scope values:

- “oma_rest_addressbook.contact”
- “oma_rest_addressbook.list”
- “oma_rest_addressbook.subscr”
- “oma_rest_addressbook.profile”
- “oma_rest_addressbook.externalRequest”

G.1.1.3 Mapping with resources and methods

The mapping of the scope values defined for the RESTful Converged Address Book API to the REST resources and methods of this API is based on the [Addressbook TS 1.0] Appendix G.1.1.3, with the following extensions and clarifications:

Note: In these tables, the root “oma_rest_addressbook.” of scope values is omitted for readability reasons.

G.1.2 Use of ‘acr:auth’
The use of ‘acr:auth’ is defined in the [Addressbook TS 1.0], Appendix G.1.2.
Appendix H. Exposure by 3rd Party Systems

A requestor (e.g. CAB User, an application) is able to request either by CAB native request or with help of the CAB APIs (i.e. POST on /{userId}/externalRequest) the following interactions with 3rd Party Systems:

- Import CAB User’s personal profile information from 3rd party systems
- Export CAB User’s PCC information to 3rd party systems
- Subscription to CAB User’s personal profile information in 3rd party systems

The CAB Enabler needs to interact with the 3rd party system in order to fulfil these requests. This can be done by either:

- using any proprietary interface exposed by the 3rd party system.
- using CAB APIs provided they are exposed by the 3rd party system.

This section specifies the CAB APIs resources that can allow the fulfilment of these interactions with a 3rd party system in a standard way.

H.1 Import CAB User’s Personal Profile Information from 3rd Party Systems

In order to implement this feature relying on CAB APIs, the 3rd party system SHALL support the following resources:

- Retrieval of the collection of profiles, as specified in section 6.16.3, i.e. GET /{userId}/profile
- Retrieval of a specific profile, as specified in section 6.17.3, i.e. GET /{userId}/profile/{profileId}

The procedure is as follows:

1. The CAB enabler retrieves the collection of profiles associated to a CAB User in a 3rd party system making use of the corresponding CAB API resource exposed by the 3rd party system.
2. The CAB enabler retrieves the desired profile(s) associated to a CAB User in a 3rd party system making use of the corresponding CAB API resource exposed by the 3rd party system. This step can be repeated periodically if requested by the CAB User.

H.2 Export CAB User’s PCC Information to 3rd Party Systems

In order to implement this feature relying on CAB APIs, the 3rd party system SHALL support the following resources:

- Creation/update of a specific profile, as specified in section 6.17.4, with ‘profileId’ variable set to a value previously agreed with the 3rd party system, i.e. PUT /{userId}/profile/{profileId}

The procedure is as follows:

1. The CAB enabler creates/updates the profile making use of the corresponding CAB API resource exposed by the 3rd party system. This step can be repeated periodically if requested by the CAB User.

H.3 Subscription to CAB User’s Personal Profile Information in 3rd Party Systems

In order to implement this feature relying on CAB APIs, the 3rd party system SHALL support the following resources:

- “Address Book changes subscriptions” specified in section 6.13. Just the subscription to profile information needs to be supported (i.e. AbChangesSubscription type containing the ‘profile’ element).
- “Individual list changes subscription” specified in section 6.14. Just the subscription to profile information needs to be supported (i.e. AbChangesSubscription type containing the ‘profile’ element).
- “Client resource for list changes notifications” specified in section 6.15 Just the notifications associated to a subscription to profile information need to be supported.

The procedure is as follows

1. The CAB enabler issues a subscription request to the personal profile information in a 3rd party system making use of the corresponding CAB API resource exposed by the 3rd party system.

2. The CAB Enabler acting as a client of CAB APIs will receive notification of any update in the personal profile information in a 3rd party system.

3. The CAB enabler may update/delete the subscription as needed making use of the corresponding CAB API resource exposed by the 3rd party system.
