APPENDIX A.	STATIC CONFORMANCE REQUIREMENTS (NORMATIVE)	47
APPENDIX B.	CHANGE HISTORY (INFORMATIVE)	48

1. Scope

The Wireless Village Instant Messaging and Presence Service (IMPS) includes four primary features:

- Presence
- Instant Messaging
- Groups
- Shared Content

Presence is the key enabling technology for IMPS. It includes client device availability (my phone is on/off, in a call), user status (available, unavailable, in a meeting), location, client device capabilities (voice, text, GPRS, multimedia) and searchable personal statuses such as mood (happy, angry) and hobbies (football, fishing, computing, dancing). Since presence information is personal, it is only made available according to the user's wishes - access control features put the control of the user presence information in the users' hands.

Instant Messaging (IM) is a familiar concept in both the mobile and desktop worlds. Desktop IM clients, two-way SMS and two-way paging are all forms of Instant Messaging. Wireless Village IM will enable interoperable mobile IM in concert with other innovative features to provide an enhanced user experience.

Groups or chat are a fun and familiar concept on the Internet. Both operators and end-users are able to create and manage groups. Users can invite their friends and family to chat in group discussions. Operators can build common interest groups where end-users can meet each other online.

Shared Content allows users and operators to setup their own storage area where they can post pictures, music and other multimedia content while enabling the sharing with other individuals and groups in an IM or chat session.

These features, taken in part or as a whole, provide the basis for innovative new services that build upon a common interoperable framework.

3. Terminology and Conventions

3.1 Conventions

The key words “MUST”, “MUST NOT”, “REQUIRED”, “SHALL”, “SHALL NOT”, “SHOULD”, “SHOULD NOT”, “RECOMMENDED”, “MAY”, and “OPTIONAL” in this document are to be interpreted as described in [RFC2119].

All sections and appendixes, except “Scope” and “Introduction”, are normative, unless they are explicitly indicated to be informative.

3.2 Definitions

None

3.3 Abbreviations

None

4. Introduction

This document describes how the SMS can be utilized to provide WV functionality.

The message flows are defined in [WV-CSP].

The enumerated values are as specified in [WVCSP].

5. SMS binding

5.1 Syntax

General SMS message format consists of preamble and parameters as follows:

WVaaBBcccDD <parameters> [&] where:

- **WV** indicates that this is a Wireless Village message. It is case sensitive.
- **aa** is the version number of the IM specification. Major version and minor version numbers without the dot in the middle, both are single digits from 0 to 9. This specification uses version number 1.1 (11 in messages).
- **BB** is the message type, identified by each message table. It is not case sensitive.
- The **ccc** is the Transaction-ID in range 0-999 without preceding zero.
- The **DD** identifies multiple short messages within single transaction; it is a two-letter identifier within the range of a-z. The first letter indicates the number (position) of the message; the second letter indicates the last part. (This gives the possibility to split a message into 26 SMSes, which limits the size of the message to $26 \times 160 = 4160$ characters. Note that it includes every additional information elements such as tags, commas and so on, so not the whole capacity is available to the user.) It is not case sensitive.
- The ampersand (&) character separates multiple WV messages in one short message. The separating ampersand does not follow the last WV message in the short message.

The general format of parameters shall be:

<name>=<value>

After the *aaBBcccDD* preamble, there is one space character. Each parameter is separated from other parameters by single space character.

If value contains spaces (), quotes (""), commas (,), parentheses (()), equal (=) or ampersand (&) characters, it shall be wrapped with quotes ("").

If value contains quotes (""), all quote characters shall be doubled.

For example if the value is:

John "Johnnie" Smith

then it shall be encoded as:

"John ""Johnnie"" Smith"

If the value is only one single quote, the encoding would be four quotes: "'''"

A parameter may also contain a list of values. In this case, the syntax shall be (example with three values):

<name>=(<value1>,<value2>,<value3>)

A parameter may also contain a group of values. These groups may be also nested. Examples:

one value having three values:

<name>=(<value1>,(<value2>,<value3>,<value4>))

nested values:

<name>=(<value1>,(<value2>,(<value3>,<value4>)))

Definitions shall be case-sensitive.

5.2 Encoding of Short Messages

The encoding of SMS messages has two alternatives: 7-bit encoding using the SMS default character set [TS 23.038] and 8-bit encoding using UTF-8 character encoding. With 8-bit encoding, the minimum supported set of characters is ISO-8859-1 (Latin 1).

Each WV short message may be either textual or contain a User Data Header (UDH) with the TP-UDHI value set to 1. In case of UDH, the detection of the WV-primitives is based on a registered WV application port identified in the headers. In case of textual short message, the detection of WV-primitives is based on detection of the message preamble. The User Data Header contains a 16-bit application port number identifying the source port and destination port. The structure of the short message with UDH is defined as follows [TS 23.040]:

The destination port number is assigned in the CSP transport-binding document [WV-CSP-TRANS]. When the session is started with a login primitive containing the UDH, the WV server and client must continue the session using the messages encoded with UDH throughout the session. Similarly, when the session is started with a login primitive without UDH, the WV server and client must continue the session without UDH.

UDL	UDHL	IEI	IEIDL	IED	UD
-----	------	-----	-------	-----	----

UDL Length of the message

UDHL Length of User Data Header (7 for WV message)

IEID Information Element Identifier (05_{hex} = 16-bit application port)

IEIDL Length of IED (4 = four octets for ports)

IED Port numbers (octet 1,2 = destination port, octet 3,4=originator port)

UD User Data (WV primitive)

The source and destination port have same port numbers, assigned in the CSP transport-binding document [WV-CSP-TRANS].

5.3 Handling of Multiple Short Messages within Transaction

A transaction over short message bearer may be split to more than one short message when parameters exceed 160 characters. To accomplish this, there are two basic techniques available:

1. Use of concatenated short messages (SM-TP level concatenation).
2. Use concatenation identifier (**DD**) identifier in a short message text.

Alternative 1) is based on SMS technology, which is optionally supported in the SMSC and terminal product. It does not require support in text level.

Alternative 2) needs to be used when SMS concatenation is not available. The rules are:

- If the short message does not need text-level concatenation (single SMS or SM-TP level concatenation), the **DD** identifier is not present.
- If the short message needs text-level concatenation, the **DD** identifier is present (starting from 'a') and the first letter identifies the current SMS within concatenation sequence and the second letter identifies the last SMS within the sequence.
- While transferring the multiple short messages concatenated in a text level, the transaction identifier will be the same in all of the short messages.
- The request or response is incomplete until all short messages within the same transaction are received.

The text -level concatenation identifier does not require that the messages will be received in order. An example of concatenation could be the terminal sending a message:

```
WV11NM23ac MC="This is a very  
WV11NM23cc very long textual content..."  
WV11NM23bc very long message, and it has very
```

And the server responding:

```
WV11ST23 ST=200
```

A single short message may also contain messages from multiple transactions as defined according to the [WV-TRANS] document. In such cases, messages are separated by an ampersand (&) according to the syntax. The preamble of each WV message must fit as a whole within the SMS message.

6. Availability of transactions

The SMS protocol itself provides some features and lacks others, which simplifies or disables certain transactions.

All instant messages that contain plain text message content and fit into the limits specified in 5.1 Syntax without truncation should be pushed to the terminal.

The following table describes the availability of each primitive defined in [WV-CSP]:

Transaction	Support	Code
AddGroupMembersRequest	Full	AM

7.2 Service tree elements

To shorten messages, the elements of the service tree have been encoded in shorter codes. The tree itself is the same as is specified in [WV-CSP]. There is one difference: the elements marked unsupported in the table below are not part of the SMS-specific service tree.

Name	Support	Code
ADDGM	Yes	AG
AttListFunc	Yes	AF
BLENT	Yes	BL
CAAUT	Yes	CA
CAINV	Yes	CI
CALI	Yes	CL
CCLI	Yes	CC
ContListFunc	Yes	FC
CREAG	Yes	CG

STSRC	Yes	ST
SUBGCN	Yes	SU
UPDPR	Yes	UP
WVCSPFeat	Yes	WV

The codes are not case sensitive.

7.3 Presence attributes

Extension attributes are not supported, only presence attributes described in the [WV-PA].

Only plain text -based presence attributes are supported.

The qualifier is not present.

To shorten messages, the presence attributes have been encoded in shorter codes.

Name	Support	Code

NOT_AVAILABLE	NA
OPEN	OP
OTHER	OT
PDA	PD
SAD	SA
SLEEPY	SL

SMS	SM
VIDEO_CALL	VC
VIDEO_STREAM	VS

The codes are not case sensitive.

7.5 Group properties

To shorten messages, the group properties have been encoded in shorter codes.

Name	Code
AccessType	AT
ActiveUsers	AU
IsMember	IM
MaxActiveUsers	MU
Name	NM
PrivateMessaging	PM
PrivilegeLevel	PL
Searchable	SE
Topic	TO
Type	TY
WelcomeNote	WN
AutoJoin	AJ

The codes are not case sensitive.

7.6 Contact list properties

To shorten messages, the contact list properties have been encoded in shorter codes.

Name	Code
DisplayName	DN
Default	DE

The codes are not case sensitive.

7.7 Search elements

To shorten messages, the enumerated search elements have been encoded in shorter codes.

Name	Code
GROUP_ID	GI
GROUP_NAME	GN
GROUP_TOPIC	GT
GROUP_USER_ID_JOINED	GJ
USER_ALIAS	UA
USER_EMAIL_ADDRESS	UE
USER_FIRST_NAME	UF
USER_ID	UI
USER_LAST_NAME	UL
USER_MOBILE_NUMBER	UM
USER_ONLINE_STATUS	UO
GROUP_USER_ID_OWNER	GO

The codes are not case sensitive.

8. SMS Binding Examples

8.1 Status primitive

With a single status code:

ST=<StatusCode>

WV11ST761 SI=im.user.com#48815@server.com ST=200

With a status code and description:

ST=(<StatusCode>,<Description>)

WV11ST761 SI=im.user.com#48815@server.com ST=(200 , "Successfully completed.")

With multiple status codes and descriptions:

ST=(<StatusCode>,<Description>)

DG=(<StatusCode>,<Description>,<GroupID n>)

DS=(<StatusCode>,<Description>,(<ScreenName n>,<GroupID n>))

DU=(<StatusCode>,<Description>,<UserID n>)

WV11ST761 SI=im.user.com#48815@server.com ST=(201 , "Partially completed.")

DU=(531 , "Unknown user." ,wv:bad_user1@im.com,wv:bad_user1@im.com)

DU=(532 , "Blocked." ,wv:bad_user3@im.com,wv:bad_user4@im.com)

8.2 Login transaction

This transaction is simplified, because there is no need to encrypt the password, since the bearer already provides the encryption.

8.2.1 LoginRequest primitive

Only the User-ID, the Client-ID, the password, the Session-Cookie, and the Time-To-Live elements are present in the primitive.

WV11LR761 UI=wv:john@smith.com CI=+1234567890 PW=this1is2my3pass
SC=im.user.com#20011224#328746293 TL=600

8.2.2 LoginResponse primitive

Only the Result, the Session-ID and the KeepAliveTime are present in the primitive. All other information elements are omitted.

WV11RL761 ST=(200 , "Successfully completed.")
SI=im.user.com#48815@server.com
KA=300

8.3 Logout transaction

8.3.1 LogoutRequest primitive

WV11OR761 SI=im.user.com#48815@server.com

8.3.2 Disconnect primitive

WV11DI761 SI=im.user.com#48815@server.com ST=200

8.4 Server initiated logout transaction

8.4.1 Disconnect primitive

WV11DI761 SI=im.user.com#48815@server.com ST=(601,"Updating server software.
All services offline for 3 hours.")

8.5 Keep Alive transaction

8.5.1 KeepAliveRequest primitive

WV11KA761 SI=im.user.com#48815@server.com TL=600

8.5.2 KeepAliveResponse primitive

WV11AK761 SI=im.user.com#48815@server.com ST=(200,"Successfully completed.")KA=600

8.6 Get service provider info transaction

8.6.1 GetSPIInfoRequest primitive

WV11GS761 SI=im.user.com#48815@server.com

8.6.2 GetSPIInfoResponse primitive

MMS messages are not allowed, thus the Logo element is not present in the primitive.

WV11SG761 SI=im.user.com#48815@server.com NA="Wireless Village"
TX="This is Wireless Village's IMPS test service"
UR="http://www.wireless-village.org"

8.7 Service request transaction

The following example illustrates service negotiation with the following parameters:

Client requests:

- All Fundamental Features,
- All IM Features,
- All Presence Features,
- None of the Group Features.

Server does not agree to provide:

- Fundamental features,
- GetWatcherList transaction,
- IM Authorization Functions.

8.7.1 ServiceRequest primitive

Client requests all functionality.

```
WV11SQ761 SI=im.user.com#48815@server.com CI=+1234567890
RF=(WV,(FF,IF,PF)) AR=F
```

8.7.2 ServiceResponse primitive

```
WV11QS761 SI=im.user.com#48815@server.com CI=+1234567890
NF=(WV,(FF,(PF,(PA,GW)),(IF,IA)))
```

8.8 Search transaction

The search pair-list is currently under discussion in [WV-CSP]; a full example cannot be provided.

8.8.1 SearchRequest primitive (1st)

```
WV11SR761 SI=im.user.com#48815@server.com SP=(UL,Smith) SL=5
```

8.8.2 SearchResponse primitive (1st)

ight@dark.com))
```

8.18 Modify properties of contact list transaction

8.18.1 ListManageRequest primitive

```
WV11LM761 SI=im.user.com#48815@server.com CL=wv:john/friends  
CP=((DN,"My enemies"),(DE,T))
```

8.18.2 ListManageResponse primitive

```
WV11ML761 SI=im.user.com#48815@server.com ST=200 CP=((DN,"My  
enemies"),(DE,T))
```

8.19 Create attribute list transaction

8.19.1 CreateAttributeListRequest primitive

```
WV11CA761 SI=im.user.com#48815@server.com PS=(OS,LT,FT)  
UI=(wv:matthias@salamander.com,wv:francisco) DL=T
```

8.19.2 Status primitive

```
WV11ST761 SI=im.user.com#48815@server.com ST=( 200 , "Successfully  
completed." )
```

8.20 Delete attribute list transaction

8.20.1 DeleteAttributeListRequest primitive

```
WV11DA761 SI=im.user.com#48815@server.com CL=wv:john/friends DL=F
```

8.20.2 Status primitive

```
WV11ST761 SI=im.user.com#48815@server.com ST=200
```

8.21 Get attribute list(s) transaction

8.21.1 GetAttributeListRequest primitive

```
WV11GA761 SI=im.user.com#48815@server.com DL=T
```

8.21.2 GetAttributeListResponse primitive

In order to be able to distinguish between User-IDs, Contact-List-IDs and the default attribute list, the parameters are separated into AG, AL, DA.

For clarification the basic syntax of Attribute-Association-List is:

<owner(s)>,<attribute(s)> ,where

<owner(s)>¹ is the contact-list-ID(s) or the user-ID(s) to whom the attributes are assigned.

<attribute(s)> is the name of the presence attribute(s) that are associated.

```
WV11AG761 SI=im.user.com#48815@server.com ST=200
  AG=((wv:john/colleagues,OS),(wv:john/family,(OS,FT)))
  AL=((((wv:matthias@salamander.com,wv:francisco@don.com),(OS,FT)),(wv
  :mary@site.com,FT)) DA=OS
```

8.22 Subscribe/unsubscribe presence transaction

8.22.1 SubscribePresenceRequest primitive

```
WV11SB761 SI=im.user.com#48815@server.com
  UI=(wv:matthias@salamander.com,wv:francisco) CL=wv:john/family
  PS=OS
```

8.22.2 Status primitive

```
WV11ST761 SI=im.user.com#48815@server.com ST=(200,"Successfully
completed.")
```

¹ The default attribute list is presented as "DEFAULT".

8.22.3 PresenceNotificationRequest primitive

For clarification the basic syntax is:

(<owner(s)>,(<attribute 1>,<value 1>),(<attribute n>,<value n>)) ,where

<owner(s)> is the user-ID(s) to whom the presence attributes and values belong.

<attribute> is the name of the presence attribute to which the value belongs.

<value> is the value of a presence attribute.

```
WV11PN761 SI=im.user.com#48815@server.com
PR=((wv:matthias@salamander.com,((OS,T),(FT,"In the
office"))),(wv:francisco,(OS,T)))
```

UI=(wv:matthias@salamander.com,wv:francisco)
```

8.22.6 Status primitive

```
WV11ST761 SI=im.user.com#48815@server.com ST=(200,"Successfully
completed.")
```

8.23 Get watcher list transaction

8.23.1 GetWatcherListRequest primitive

```
WV11GW761 SI=im.user.com#48815@server.com
```

8.23.2 GetWatcherListResponse primitive

```
WV11WG761 SI=im.user.com#48815@server.com
UI=(wv:matthias@salamander.com,wv:francisco)
```

8.24 Get presence transaction

8.24.1 GetPresenceRequest primitive

```
WV11GP761 SI=im.user.com#48815@server.com
UI=(wv:matthias,wv:francisco@don.com) PS=OS
```

8.24.2 GetPresenceResponse primitive

For clarification the basic syntax is:

(<owner(s)>,(<attribute 1>,<value 1>),(<attribute n>,<value n>)) ,where

<owner(s)> is the user-ID(s) to whom the presence attributes and values belong.

<attribute> is the name of the presence attribute to which the value belongs.

<value> is the value of a presence attribute.

```
WV11PG761 SI=im.user.com#48815@server.com ST=200
PR=( (wv:matthias@salamander.com, (OS,T)), (wv:francisco, (OS,T)) )
```

```
WV11ST761 SI=im.user.com#48815@server.com ST=(200,"Successfully  
completed.")
```

8.46 Example for multiple transactions

In the following example the client encapsulates 3 transactions into two SMSes. The client:

- Responds to a request (Transaction-ID 700),
- Requests to join a group (Transaction-ID 701).
- Responds to another request (Transaction-ID 702),

1st SMS:

```
WV11ST700 SI=im.user.com#48815@server.com ST=(200,"Successfully  
completed.") & WV11JG701ab SI=im.user.com#48815@server.com  
GI=wv:/chatgroup@there.com SN=( "-=
```

2nd SMS:

```
WV11JG701bb Bart Simpson="--",wv:/chatgroup@there.com)) JR=T & WV11ST702  
SI=im.user.com#48815@server.com ST=200
```

9. Static Conformance Requirement for CSP SMS Binding:

Req#	Description	C-Req	S-Req	Reference
CSPSMS-1	Support for SMS encoded with UDH	O	O	
CSPSMS-2	When session is started with UDH and the server supports it (CSPSMS-1), all primitives are encoded with UDH during the session	M	M	
CSPSMS-3	Support for SMS encoded without UDH (textual)	O	O	
CSPSMS-4	When session is started without UDH and the server supports it (CSPSMS-3), all primitives are encoded without UDH during the session	M	M	
CSPSMS-5	Support for one SMS message to contain multiple WV messages	O	O	

Appendix A. Static Conformance Requirements (Normative)

The static conformance requirements for this specification is specified in [CSP SCR] and [SSP SCR].

Appendix B. Change History

(Informative)

Type of Change	Date	Section	Description
Class 0	2002-10-25		The initial version of this document.
