# 1. Scope

The Wireless Village Instant Messaging and Presence Service (IMPS) includes four primary features:

- Presence
- Instant Messaging
- Groups
- Shared Content

Presence is the key enabling technology for IMPS. It includes client device availability (my phone is on/off, in a call), user status (available, unavailable, in a meeting), location, client device capabilities (voice, text, GPRS, multimedia) and searchable personal statuses such as mood (happy, angry) and hobbies (football, fishing, computing, dancing). Since presence information is personal, it is only made available according to the user's wishes - access control features put the control of the user presence information in the users' hands.

Instant Messaging (IM) is a familiar concept in both the mobile and desktop worlds. Desktop IM clients, two-way SMS and two-way paging are all forms of Instant Messaging. Wireless Village IM will enable interoperable mobile IM in concert with other innovative features to provide an enhanced user experience.

Groups or chat are a fun and familiar concept on the Internet. Both operators and end-users are able to create and manage groups. Users can invite their friends and family to chat in group discussions. Operators can build common interest groups where end-users can meet each other online.

Shared Content allows users and operators to setup their own storage area where they can post pictures, music and other multimedia content while enabling the sharing with other individuals and groups in an IM or chat session.

These features, taken in part or as a whole, provide the basis for innovative new services that build upon a common interoperable framework.

## 3. Terminology and Conventions

### 3.1 Conventions

The key words “MUST”, “MUST NOT”, “REQUIRED”, “SHALL”, “SHALL NOT”, “SHOULD”, “SHOULD NOT”, “RECOMMENDED”, “MAY”, and “OPTIONAL” in this document are to be interpreted as described in [RFC2119].

All sections and appendixes, except “Scope” and “Introduction”, are normative, unless they are explicitly indicated to be informative.

### 3.2 Definitions

None

### 3.3 Abbreviations

None

## 4. Introduction

This document defines the valid XML documents representing a valid Wireless Village SSP protocol message using Document Type Definition mechanism. The base syntactical checking can be done by a validating XML parser. Further syntactical constraints are given in the data types assignment section.

## 5. Document Type Definition

## 6. Data Type Assignments for SSP XML ELEMENTS

This section provides the mapping of the informational elements in SSP primitives to XML element constructions or attributes. If the mapped value is an element construction, then the specified element construction inside the transaction element represents the SSP information element. If the mapped value is an attribute, then the information element is represented by the specified attribute of the container element (the transaction element).

Information Element	XML Element	XML Attribute
Accepted-Content-Length		acceptedContentLength
Add-User-ID-List	AddUsers	
Agreed-Service-List	ServiceTree	
Agreed-Sub-Protocol		subProtocol
Agreed-Time-To-Live		timeToLive
Attribute-Association-List	AttributeAssociation+	
Authorization-Result		granted (of SubscriberResult)
Authorizing-User-ID	Authorizer	
Block-List-Status		blockListStatus
Block-Entity-List	BlockList	
Canceled-Content-ID-List	ContentIDList	
Canceled-User-ID-List	UserID+	
Canceled-User	Canceled	
Canceling-User	Canceling	
Cancel-Reason	CancelNote	
Client-ID		clientID
Client-Originated		clientOriginated
Completed		completed
Contact-List-ID		contactListID
Contact-List-ID-List	ContactListID+	
Contact-List-ID-List of GetPresenceRequest	VerContactListID+	
Contact-List-Props	ContactListProperties	
Contact-List-Version	Version	
Content	ContentData	

Default-Association-List	DefaultAttributeList	
Default-C-List-ID		defaultContactListID
Default-List		defaultList
Delivery-Result	DeliveryReport	
Delivery-Report-Request		deliveryReport
Delivery-Time	DeliveryTime	
Desired-Service-List	ServiceTree	
Desired-Sub-Protocol		subProtocol
Export-List		exportList
Grant-List-Status		grantListStatus
Grant-Entity-List	GrantList	
Group-ID		groupID
Group-Prop-List	GroupProperties	
Invite-Acceptance		acceptance
Invite-Content-ID-List	ContentIDList	
Invite-Group-ID	GroupID	
Invite-ID		inviteID
Invite-Presence-Attribute-List	AttributeList	
Invite-Reason	InviteNote	
Invite-Response	ResponseNote	
Invite-Type		inviteType
Invited-User	Invited	
Inviting-User	Inviting	
Join-Group		joinGroup
Joined-Request		joinedListRequest
Joined-User-Screen-Name-List	JoinedUser+	
Joined-User-Screen-Name-List of GroupChangeNotice	Joined	
Left-User-Screen-Name-List	Left	
List-of-Subscribing-User-ID-and-Presence-Attribute-List	AuthRequestTuple/Subscribers and AuthRequestTuple/AttributeList	

Message-Count		messageCount
Message-Delivery-Method		deliveryMethod
Message-ID		messageID
Message-ID-List		messageID of MessageSpec+
Message-Info	MessageInfo	
Message-URI		messageURI
Message-URI-List		messageID of MessageSpec+
Meta-Information	MetaInfo	
Own-Prop-List	OwnProperties	
Password-Digest	PasswordDigest	
Presence-Attribute-List	AttributeList	
Presence-Value-List	PresenceValue+	
Presence-Value-Version	Version	
Presence-Value-Version-List of GetPresenceRequest	Version of (VerUserID and VerContactListID)	
Presence-Value-Version-List	Version of (PresenceValue+)	
Protocol		protocol
Protocol-Version		protocolVersion
Reason-Text	ReasonText	
Recipients	Recipient+	
Recipient-UserID-List	RecipientIDs	
Reject-User-ID-List	RejectList	
Remove-User-ID-List	RemoveUsers	
Responding-User	Responding	
Screen-Name	ScreenName	
Search-Criteria	SearchCriteria	
Search-Findings		searchFindings
Search-ID		searchID
Search-Index		searchIndex
Search-Limit		searchLimit

Search-Pair-List	SearchTerm+	
Search-Results	SearchResult	
Search-Type		searchType
SecretToken	SecretToken	
Service-ID		serviceID
Service-List	ServiceTree	
Session-ID		sessionID
Status code		code
Status description		statusDescription
Status-Info	Status	
Subscribe-Notif		subscribeNotif
Subscribing-User-ID-List	Subscribers	
Subscribing-User-ID-List in AuthorizationResponse	SubscriberResult+	
Subscription-Status		subscribed
Time -To-Live		timeToLive
Transaction-ID		transactionID
Unblock-Entity-List	UnblockList	
Ungrant-Entity-List	UngrantList	
Updated-User-Profile-List	UserProfileValue+	
User-ID		userID
User-ID-List	UserID+	
User-ID-List of GetPresenceRequest	VerUserID+	
User-ID-List of (GetGroupMemberResponse or MemberAccessRequest)	OrdinaryUsers	
User-ID-List-Adm	Admins	
User-ID-List-Mod	Moderators	
User-List	ContactUser+	
User-List in RemoveListMemberRequest	ContactUserSpec+	
User-Profile-List	UserProfileValue+	
Validity		validity

Verify-User-ID-List	VerifyUserID+	
Welcome -Text	WelcomeNote	

## 7. Data Types for XML Elements and attributes

### 7.1 Redefined and new data types

#### 7.1.1 Boolean

A boolean value indicates either true or false.

It is encoded to XML as an enumerated type with possible values of:

- "Yes" : means the specified value is true.
- "No" : means the specified value is false.

These values are case sensitive. Other values are invalid.

#### 7.1.2 MSISDN

MSISDN is a string containing a valid MSISDN number.

#### 7.1.3 URL

The value of the type is a string of a Uniform Resource Locator. See rfc2396.

### 7.2 Data types for XML Attributes

The XML attributes of the elements used are defined in this section. Description of the basic types can be found in [WV-DataTypes].

XML Attribute	acceptance
Data type	Boolean
Description	Specifies if the invited party accepted the invitation.

XML Attribute	acceptedContentLength
Data type	Integer
Description	Maximum size of message that can be pushed to the user. See [WV-SSP] Section 12.2.8.

XML Attribute	authID
Data type	String
Description	Gives an identifier for an authentication request tuple. It is specified by the requestor server. Unique for a session. Case sensitive.

XML Attribute	blockListStatus
Data type	Enum
Range	"Active"   "Inactive"
Description	Indicates if the block list is in use ("Active") or not ("Inactive"). See [WV-SSP] Section 12.2.14.

XML Attribute	clientOriginated
Data type	Boolean
Description	Attribute of the Transaction method. It specifies whether the transaction is originated from a client (Yes) or from a Wireless Village server (No).

XML Attribute	code
Data type	Integer
Description	Defined only in the Status element. It specifies the status code. Possible status codes are defined in Section 9. of the [WV-CSP].

XML Attribute	completed
Data type	Boolean
Description	Indicates the completion of the search on the server. 'No' if still searching and new results may come, 'Yes' if server has finished searching, and new results will not come anymore.

XML Attribute	contactListID
Data type	String
Description	Corresponds to the Contact-List-ID defined in [WV-SSP] Section 3.3.3. Case insensitive.

XML Attribute	contentType
Data type	String
Description	Specifies the content type of an instant message. Must be in MIME type format.

XML Attribute	defaultList
Data type	Boolean
Description	Specifies if the container attribute list operation element is for the default list of the user ("Yes") or for an ordinary list ("No").

XML Attribute	deliveryMethod
Data type	Enum
Range	"NotifyGet"   "Push"
Description	Specifies the method used for message delivery. See [WV-SSP] and [WV-CSP] Section 7.1.2.1.

XML Attribute	deliveryReport
Data type	Boolean
Description	Specifies if a delivery report is requested for the send instant message.

XML Attribute	encoding
Data type	String
Description	Defines the used encoding method for the content of the element. Encoding scheme is base64 by default (i.e. when this attribute is not specified).

XML Attribute	exportList
Data type	Boolean
Description	See [WV-SSP].

XML Attribute	format
Data type	String
Description	Defines the format of the container element. In this version this value is only specified for Version, for what the default format is DateTime. This format means a value in DateTime format specified in [WV-DataTypes].

XML Attribute	granted
Data type	Boolean
Description	Specifies for a user if his authentication request was allowed ("Yes") or not ("No").

XML Attribute	grantListStatus
Data type	Enum
Range	"Active"   "Inactive"
Description	Indicates if the grant list is in use ("Active") or not ("Inactive"). See [WV-SSP] Section 12.2.14.

XML Attribute	groupID
Data type	String
Description	Corresponds to the Group-ID defined in [WV-SSP] Section 3.3.4. Case insensitive.

XML Attribute	inviteID
Data type	String
Description	See in [WV-SSP]. Case sensitive.

XML Attribute	inviteType
Data type	Enum
Range	"GR"   "IM"   "PR"   "SC"
Description	Defines the type of the invitation. In case of value "GR", the invitation is for a group, in case of value "IM", the invitation is for instant messaging, in case of "PR", the invitation is for a presence attribute, in case of "SC" the invitation is for a shared content.

XML Attribute	joinGroup
Data type	Boolean
Description	Indicates that the newly created group is joined (or not) at creation time.

XML Attribute	joinedListRequest
Data type	Boolean
Description	See in [WV-SSP] Section 13.1.3.

XML Attribute	messageCount
Data type	Integer
Description	The maximum number of message-info structures to be returned.

XML Attribute	messageID
Data type	String
Description	Defines a message identifier that uniquely identifies the message. The generator of the message must guarantee that the message identifier is globally unique. Must be in format msg-id of rfc2822. For the right-hand side of the msg-id, the domain name of the server should be used. Case sensitive.

XML Attribute	messageURI
Data type	URI
Description	Specifies a message by a Uniform Resource Locator.

XML Attribute	mode
Data type	Integer
Range	"Request"   "Response"
Description	Attribute of the Transaction method. It specifies whether the transaction is a request of a response without parsing of the content of the transaction.

XML Attribute	MSISDN
Data type	MSISDN
Description	Specifies a valid phone number, by which for example a client can be identified.

XML Attribute	nick
Data type	String
Description	Defines a nickname for a user on the contact list.

XML Attribute	prop
Data type	String
Description	Defines a property name.

XML Attribute	protocol
Data type	String
Range	"WV-SSP"
Description	Defines the protocol used. Must be "WV-SSP".

XML Attribute	protocolVersion
Data type	String
Range	"1.1"
Description	Defines the version of the protocol used. Must be "1.1".

XML Attribute	searchFindings
Data type	Integer
Description	See in [WV-SSP].

XML Attribute	searchID
Data type	String
Description	See in [WV-SSP]. Case sensitive.

XML Attribute	searchIndex
Data type	Integer
Description	See in [WV-SSP].

XML Attribute	searchLimit
Data type	Integer
Description	See in [WV-SSP].

XML Attribute	searchType
Data type	Enum
Range	"G"   "U"
Description	Defines the type of the search. In case of value "G", the search is for a group, in case of value "U", the search is for users.

XML Attribute	serviceID
Data type	String
Format	Defined in [WV-SSP] Section 3.3.7.
Description	See [WV-SSP] Section 3.3.7. Case sensitive.

XML Attribute	sessionID
Data type	String
Description	Specifies the used session identifier. Case sensitive.

XML Attribute	subscribed
Data type	Boolean
Description	Used in a subscription status response. Specifies if the asked entity is subscribed ("Yes") to the group or not ("No").

XML Attribute	subscribeNotif
Data type	Boolean
Description	A flag indicating that the user wants to activate the group change notifications while joining the group.

XML Attribute	subProtocol
Data type	String
Description	During session negotiation it specifies the subprotocol name and version for proprietary extensions.

XML Attribute	timeToLive
Data type	Integer
Description	Defines the time in second how long the containing action is valid.

XML Attribute	url
Data type	URL
Description	Identifies a content or a client by a Uniform Resource Locator.

XML Attribute	userID
Data type	String
Description	Corresponds to the User-ID defined in [WV-SSP] Section 3.3.2. Case insensitive.

XML Attribute	validity
Data type	Integer
Description	Specifies the time in seconds how long the specified entity is regarded valid.

XML Attribute	value
Data type	String
Description	Specifies the value for the attribute and the operand of the search to be executed.

XML Attribute	transactionID
Data type	String
Description	Identifies a SSP transaction. The initiating party assigns this ID. Case sensitive.

XML Attribute	xmlns
Data type	URL
Description	Specifies the namespace the message is using.

XML Attribute	Data Types for XML Elements and attributes
Data type	Boolean
Description	A flag indicating that the user wants to activate the group change notifications while joining the group.

### 7.3 Data types for XML Terminal Elements

This section will define the SSP specific or redefined XML elements. Description of the basic types and description of terminal elements common with CSP can be found in [WV-DataTypes]. If an XML terminal element definition is found in both this document and in [WV-DataTypes] then the given XML terminal elements is redefined by this document and the definition below must be used. Empty terminal elements representing protocol primitives are not listed here.

For description of the XML terminal elements inside the ServiceTree element see the Section 7.1 of the [WV-SSP] document.

XML ELEMENT	Authorizer
Data type	EMPTY
Format	
Description	Defines an authorizer user using userid.
Range	

**Table 1. Authorizer**

XML ELEMENT	CancelNote
Data type	String
Format	
Description	Short descriptive text for canceling of invitation.
Range	

**Table 2. CancelNote**

XML ELEMENT	ClientID
Data type	EMPTY
Format	
Description	Container element for possible client identification methods (url, msisdn etc..)
Range	

**Table 3. ClientID**

XML ELEMENT	ContactListID
Data type	EMPTY
Format	
Description	Container element for contactListID attribute.
Range	

**Table 4. ContactListID**

XML ELEMENT	ContactUser
Data type	EMPTY
Format	
Description	Defines a user in a contact list by user id and nickname.
Range	

**Table 5. ContactUser**

XML ELEMENT	ContactUserSpec
Data type	EMPTY
Format	
Description	Uniquely identifies a user in the contact list either by user id or nickname.
Range	

**Table 6. ContactUserSpec**

XML PCDATA	ContentID
Data type	EMPTY
Format	Defined in [WV-CSP].
Description	Identifies a shared content by url attribute.
Range	

**Table 7. ContentID**

XML PCDATA	DateTime
Data type	Date and Time
Format	Specified in the forat attribute.
Description	Date and time.
Range	

**Table 8. DateTime**

XML ELEMENT	DeliveryTime
Data type	DateTime
Format	Specified in the format attribute
Description	Date and time of message delivery.
Range	

**Table 9. DeliveryTime**

XML ELEMENT	GroupID
Data type	EMPTY
Format	
Description	Container element for groupID attribute.
Range	

Table 10. GroupID

XML ELEMENT	JoinedUser
Data type	String
Format	
Description	Specifies a joined user of a group with screen name and UserID. The element contains the actual screen name of the user in the specified group, the userID attribute contains the UserID.
Range	

Table 11. JoinedUser

XML ELEMENT	MessageSpec
Data type	EMPTY
Format	
Description	Uniquely identifies a message by message id or url.
Range	

Table 12. MessageSpec

XML ELEMENT	PasswordDigest
Data type	Binary
Format	Defined in encoding attribute. BASE64 by default.
Description	The password digest used in login phase. See [WV-SSP]
Range	

Table 13. PasswordDigest

XML ELEMENT	PresenceSubList
Data type	String
Format	As defined in the referred namespace.
Description	Presence attribute list with or without values. This element is used to give reference to the namespace (DTD) to be used under this specific tag.
Range	The namespace attribute points to a valid Wireless Village presence namespace.

Table 14. PresenceSublist

XML ELEMENT	Property
Data type	String
Format	
Description	Text containing a property information identified by the prop attribute and its value is contained in the element value.
Range	

**Table 15. Property**

XML ELEMENT	ReasonText
Data type	String
Format	
Description	Text describing a reason of an operation.
Range	

**Table 16. ReasonText**

XML ELEMENT	SearchTerm
Data type	EMPTY
Format	
Description	Container element for search terms. Contains an attribute type (attr) and a value which the search operation must be carried out.
Range	

**Table 17. SearchTerm**

XML ELEMENT	ScreenName
Data type	String
Format	
Description	Defines the screen name of a user in a group. Group is specified in the groupID attribute. Element content is case insensitive.
Range	

**Table 18. ScreenName**

XML ELEMENT	SecretToken
Data type	Binary
Format	Defined in encoding attribute. By default BASE64 encoded
Description	Secret token used in login phase.
Range	

**Table 19. SecretToken**

XML ELEMENT	StatusDescription
Data type	String
Format	
Description	Text containing a status description in response of a request.
Range	

**Table 20. StatusDescription**

XML ELEMENT	UPInfo
Data type	String
Format	
Description	Text containing a user profile information indentified by the attr attribute and its value is contained in the element value.
Range	

**Table 21. UPInfo**

XML ELEMENT	UserID
Data type	EMPTY
Format	
Description	Container element for userID attribute.
Range	

**Table 22. UserID**

XML ELEMENT	Version
Data type	EMPTY
Format	
Description	Specifies a version in the element vale. Format specified in the format attribute. By default format is DateTime defined in [WV-CSP].
Range	

**Table 23. Version**

XML ELEMENT	WelcomeNote
Data type	String
Format	
Description	Welcome text of a group.
Range	

**Table 24. WelcomeNote**

## 7.4 Description of composed XML Elements

In this section will provide the descriptions of the composed XML elements that are neither assigned to an informational element nor are terminal elements.

XML Element	AuthRequestTuple
Description	<p>This element contains the Authorizer (Authorizing-User-ID informational element), the Subscribers (List-of-Subscribing-User-ID informational element) and the AttributeList (Presence-Attribute-List informational element). It means who (Subscribers) want what information (AttributeList) about which user (Authorizer).</p> <p>One AuthorizationRequest primitive can contain more AuthRequestTuples. Different AuthRequestTuples represent different authorization requests.</p>

XML Element	AuthResponseTuple
Description	<p>This element contains the Authorizer (Authorizing-User-ID informational element) and the SubscriberResults (Subscribing-User-ID-List and Authorization-Result informational elements together). It means who responds to the request (Authorizer) and who he allows or not (SubscriberResult).</p> <p>One AuthorizationResponse primitive can contain more AuthRequestTuples. Different AuthResponseTuples represent different authorization responses.</p>

XML Element	PresenceValue
Description	<p>Contains a list of presence attributes along with its values (Presence-Value-List informational element) and an optional version information (Presence-Value-Version informational element)</p>

XML Element	Recipient
Description	<p>Defines the recipient of an instant message. The instant message must be delivered to the address defined in this field. Can contain an optional RecipientDisplay element describing what destination should be displayed to the recipient user (e.g. the group name where the message was originally sent).</p>

XML Element	Requestor
Description	<p>Represents the requestor of a request primitive.</p>

XML Element	Sender
Description	<p>Describes the sender of an instant message. Can contain the optional SenderDisplay element describing what source should be displayed to the recipient user.</p>

XML Element	Session
Description	Session element represents transactions sended in the same sessions. Its sessionID attribute dentifies the session between the requestor and the provider server.

XML Element	SetupTransaction
Description	Contains a transaction outside of n existing session. Possible child elements are the transactions for session setup.

XML Element	SubscriberResult
Description	Defines the result of one authorization request. Contains the UserID who is allowed/forbidden to access the defined attribute and the granted attribute that defines if the access was allowed or not.

XML Element	Transaction
Description	Contains an SSP transaction primitive.

XML Element	User
Description	Represents a specific user using a specific terminal.

XML Element	VerUserID
Description	Represents a versioned user identifier (User-ID-List informational element). See description of Presence-Value-Version-List in [WV-SSP].

---

XML Element	VerContactListID
Description	Represents a versioned contact list identifier (Contact-List-ID-List informational element). See description of Presence-Value-Version-List in [WV-SSP].

XML Element	WV-SSP-Message
Description	Represents the SSP protocol message

## 8. XML Binding Examples

Examples of selected SSP transactions are presented in this section.

### 8.1 Login Transaction

```
<!-- Message from ServerA to ServerB -->
<WV-SSP-Message xmlns="http://www.wireless-village.org/SSP1.1">
  <SetupTransaction mode="Request" transactionID="0">
    <SendSecretToken serviceID="wv@operator.hu" protocol="WV-SSP"
      protocolVersion="1.1">
      <SecretToken encoding="base64">
