Use of this document is subject to all of the terms and conditions of the Use Agreement located at <http://www.openmobilealliance.org/UseAgreement.html>.

Unless this document is clearly designated as an approved specification, this document is a work in process, is not an approved Open Mobile Alliance™ specification, and is subject to revision or removal without notice.

You may use this document or any part of the document for internal or educational purposes only, provided you do not modify, edit or take out of context the information in this document in any manner. Information contained in this document may be used, at your sole risk, for any purposes. You may not use this document in any other manner without the prior written permission of the Open Mobile Alliance. The Open Mobile Alliance authorizes you to copy this document, provided that you retain all copyright and other proprietary notices contained in the original materials on any copies of the materials and that you comply strictly with these terms. This copyright permission does not constitute an endorsement of the products or services. The Open Mobile Alliance assumes no responsibility for errors or omissions in this document.

Each Open Mobile Alliance member has agreed to use reasonable endeavors to inform the Open Mobile Alliance in a timely manner of Essential IPR as it becomes aware that the Essential IPR is related to the prepared or published specification. However, the members do not have an obligation to conduct IPR searches. The declared Essential IPR is publicly available to members and non-members of the Open Mobile Alliance and may be found on the “OMA IPR Declarations” list at <http://www.openmobilealliance.org/ipr.html>. The Open Mobile Alliance has not conducted an independent IPR review of this document and the information contained herein, and makes no representations or warranties regarding third party IPR, including without limitation patents, copyrights or trade secret rights. This document may contain inventions for which you must obtain licenses from third parties before making, using or selling the inventions. Defined terms above are set forth in the schedule to the Open Mobile Alliance Application Form.

NO REPRESENTATIONS OR WARRANTIES (WHETHER EXPRESS OR IMPLIED) ARE MADE BY THE OPEN MOBILE ALLIANCE OR ANY OPEN MOBILE ALLIANCE MEMBER OR ITS AFFILIATES REGARDING ANY OF THE IPR'S REPRESENTED ON THE “OMA IPR DECLARATIONS” LIST, INCLUDING, BUT NOT LIMITED TO THE ACCURACY, COMPLETENESS, VALIDITY OR RELEVANCE OF THE INFORMATION OR WHETHER OR NOT SUCH RIGHTS ARE ESSENTIAL OR NON-ESSENTIAL.

THE OPEN MOBILE ALLIANCE IS NOT LIABLE FOR AND HEREBY DISCLAIMS ANY DIRECT, INDIRECT, PUNITIVE, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES ARISING OUT OF OR IN CONNECTION WITH THE USE OF DOCUMENTS AND THE INFORMATION CONTAINED IN THE DOCUMENTS.

3. Terminology and Conventions

3.1 Conventions

The key words “MUST”, “MUST NOT”, “REQUIRED”, “SHALL”, “SHALL NOT”, “SHOULD”, “SHOULD NOT”, “RECOMMENDED”, “MAY”, and “OPTIONAL” in this document are to be interpreted as described in [RFC2119].

All sections and appendixes, except “Scope” and “Introduction”, are normative, unless they are explicitly indicated to be informative.

The formal notation convention used in sections 8 and 9 to formally express the structure and internal dependencies between specifications in the Enabler Release specification baseline is detailed in [IOPPROC].

3.2 Definitions

Enabler Release Collection of specifications that combined together form an enabler for a service area, e.g. a download enabler, a browsing enabler, a messaging enabler, a location enabler, etc. The specifications that are forming an enabler should combined fulfil a number of related market requirements.

Minimum Functionality Description Description of the guaranteed features and functionality that will be enabled by implementing the minimum mandatory part of the Enabler Release.

3.3 Abbreviations

ECMA	European Computer Manufacturer Association
ERDEF	Enabler Requirement Definition
ERELD	Enabler Release Definition
GKA	Generate Key Assurance
ICC	Integrated Circuit Card
KEYGEN	Key Generation
OBKG	On Board Key Generation
OMA	Open Mobile Alliance
RKE	Remote Key Enrolment
ME	Mobile Equipment
PKI	Public Key Infrastructure
SE	Security Element
WAP	Wireless Application Protocol
WIM	Wireless Identity Module

4. Introduction

This document outlines the Enabler Release Definition for "On-Board Key Generation and Remote Key Enrolment" and the respective conformance requirements for clients, smartcards, and servers claiming compliance to it as defined by Open Mobile Alliance across the specification baseline.

This enabler aims to introduce on-board key generation and remote key enrolment functionality by defining additional ECMA Scripts and functions in the WIM. It will enable, first, a remote invocation of on-board key generation in the WIM and, second, remote key enrolment for getting (new) user certificates. Both functions are implemented as ECMA scripts that are embedded in an xHTML page.

These features answer a requirement for on-board key generation mainly due to the sensitivity of the non-repudiation key pairs. In some legal contexts this requirement is also considered mandatory. Key enrolment functionality is important in order to enable an over the air enrolment of existing, or newly generated keys, and getting new certificates for these keys.

The definition of the ECMA Script crypto functions and the WIM functions allow for the implementation of a mobile PKI model that is more closely aligned with the model currently in wide spread use in wired clients. The use of well known and broadly supported Internet standards allows one to build a Wireless PKI based on existing Public Key Infrastructure.

4.1 Architecture

The architecture is the one defined in [WPKI], with no addition of entity or interface.

The following picture summarizes the three entities and their roles in the on-board key generation and registration process.

The PKI is responsible for issuing certificates and can initiate key generation and certificate enrollment requests. Key generation may occur only once, while a key may be enrolled into multiple PKI

In this model the mobile entity, or device, is responsible for interpreting and acting upon the commands it will receive from a PKI. Mainly this involves the proper generation, signing and formatting of the response that may be required. It also interacts with the SE for cryptographic operations.

The SE will perform, in addition to standard cryptographic functionality operations, the secure generation of new keys inside the SE (KEY GEN) and the signature generation (GKA) providing Proof of Possession and thereby assurance that the was generated by a genuine SE.

4.2 Example Use Case

4.2.1 Use case 1 : Deploying Public Key product

The user owns a WIM-enabled mobile phone with a SIM/WIM (SE), issued by its Operator. At that time all SIM/WIM are alike, ie. not yet initialised with user's PKI credentials; Assuming the user wants to use its Operator's m-commerce services s/he asks its Operator to activate the service. The operator will then provide the user with the necessary information to remotely complete this activation with the OBKG services.

Benefits of OBKG for the Operator : facilitated smartcard management as cards are blank until the users configure them ; no need to pre-configure or pre-generate credentials.

4.2.2 Use case 2 : Third party usage of PK product

The user owns a WIM enabled mobile phone with a SIM/WIM (SE), issued by its operator. The operator collaborates with a financial institute to provide m-banking services to the user. For this purpose the operator delegates some administrative rights to the financial institute. The financial institute can then apply its own registration policies to generate its own user credentials. The financial institute will provide the user with the necessary information to remotely enroll to the m-banking services.

Benefits of OBKG for the Operator and Third parties : Operators have means to share the PKI features of their cards and, while keeping control of their cards, can provide third parties with control on users' credentials.

5. Enabler Release Specification Baseline

This section is normative.

The following specifications comprise the OMA OBKG enabler release:

“On-board Key Generation and Key Enrollment Requirements, version 1.0”	[OBKG RD]
“ECMA Script Crypto Library, Version 1_1”	[ESMPCrypto]
“Wireless Identity Module, Part: Security, Version 1_2”	[WIM]
“Wireless Application Protocol Public Key Infrastructure Definition, Version 1_1”	[WPKI]

6. Minimum Functionality Description for OBKG

This section is informative.

Key enrolment might be implemented alone (when keys are generated before the WIM is issued). On board key generation requires the implementation of key enrolment.

6.1 Minimal Functionality Description for Key Enrolment

- PKI portals : support of the enroll function, as specified in [WPKI]
- ME : implementation of the ECMA script 'enroll', as specified in [ESMPCrypto]
- ME : support of the WIM 'gka' function; [WIM]
- WIM: implementation of the 'gka' function; [WIM]

6.2 Minimal Functionality Description for On-Board Key Generation

- PKI portals : support of keyGen an enroll function, as specified in [WPKI]
- ME : implementation of the ECMA script 'keygen', as specified in [ESMPCrypto]
- ME : support of the WIM 'keygen' function; [WIM]
- WIM : implementation of the 'keygen' function. [WIM]
- ME : implementation of the ECMA script 'enrol', as specified in [ESMPCrypto]
- ME : support of the WIM 'gka' function; [WIM]
- WIM: implementation of the 'gka' function; [WIM]

7. Conformance Requirements Notation Details

This section is informative

The tables in following chapters use the following notation:

- Item:** Entry in this column MUST be a valid ScrItem according to [IOPPROC].
- Feature/Application:** Entry in this column SHOULD be a short descriptive label to the **Item** in question.
- Status:** Entry in this column MUST accurately reflect the architectural status of the **Item** in question.
- M means the **Item** is mandatory for the class
 - O means the **Item** is optional for the class
 - NA means the **Item** is not applicable for the class
- Requirement:** Expression in the column MUST be a valid TerminalExpression according to [IOPPROC] and it MUST accurately reflect the architectural requirement of the **Item** in question.

8. ERDEF for OBKG - Client Requirements

This section is normative.

These tables summarize the ERDEF listed in the specifications, and introduced by the OBKG features. In case of discrepancy, the specifications take precedence.

Item	Feature / Application	Status	Requirement
OMA-ERDEF-OBKG-C-001	ECMA GenEnroll	M	[ESMPCrypto]
OMA-ERDEF-OBKG-C-002	ECMA KeyGen	M	[ESMPCrypto]
OMA-ERDEF-OBKG-C-003	WPKI	M	[WPKI]

Table 1 ERDEF for OBKG Client-side Requirements

9. ERDEF for OBKG - Server Requirements

This section is normative.

Item	Feature / Application	Status	Requirement
OMA-ERDEF-OBKG-S-001	ECMA GenEnroll	M	[ESMPCrypto]
OMA-ERDEF-OBKG-S-002	ECMA KeyGen	M	[ESMPCrypto]
OMA-ERDEF-OBKG-S-003	WPKI	M	[WPKI]

Table 2 ERDEF for OBKG Server-side Requirements

10. ERDEF for OBKG - ICC Requirements

This section is normative.

Item	Feature / Application	Status	Requirement
OMA-ERDEF-OBKG-ICC-001	WIM GenerateKeyAssurance	O	[WIM]
OMA-ERDEF-OBKG-ICC-002	WIM Generate Asymmetric Key Pair	O	[WIM]

Table 3 ERDEF for OBKG ICC Requirements

Appendix A. Change History

(Informative)

A.1 Approved Version History

Reference	Date	Description

A.2 Draft/Candidate Version V1.0 History

Document Identifier	Date	Sections	Description
Candidate version OMA-ERELD-OBKG-V1_0	22-3-2005		Candidate approval as TP ref OMA-TP-2005-0091-OBKG-V1_0-for-Candidate-approval
Draft version OMA-ERELD-OBKG-V1_0	2-2-2005		ETR reference made informative, reference to OBKG RD included, ICC defined, WPKI version changed to 1.1, many editorial changes, (following consistency review comments)
Draft version OMA-ERELD-OBKG-V1_0	10-11-2004		References to ETR added
Draft version OMA-ERELD-OBKG-V1_0	01-04-2004		Doc references update, sec 5 CR follow up table removed, sec 8 WPKI req,
Draft version OMA-ERELD-OBKG-V1_0	03-02-2004		New doc references, new ERDEF, ECMA def, Usecase, Architecture
Draft version OMA-ERELD-OBKG-V1_0	09-09-2003		New doc references, new ERDEF
Draft version OMA-ERELD-OBKG-V1_0	24-07-2003		The initial version of this document.
