# 1. Scope

This specification provides the OneAPI profile V4.0 of RESTful Network APIs.

The OneAPI profile of RESTful Network APIs specifies a subset of the existing OMA RESTful Network APIs. This specification contains tables with information on what interfaces are mandated in the profile that **MUST** be implemented in order to claim conformance with the profile.

The GSMA OneAPI project is addressing deployment and operational considerations for 3rd party applications, and is re-using a subset of the Parlay X [PSA] and OMA RESTful Network APIs for this. It aims to reduce the effort and time needed to create applications and content that is portable across mobile operators.

## 4. Introduction

The OneAPI profile of RESTful Network APIs defines a subset of the resources and HTTP methods in in these APIs that must be supported by any entity conforming to the profile, plus the corresponding Parlay X [PSA] interfaces and operations where appropriate. For example, for the Short Messaging API the profile mandates support for resources and HTTP methods corresponding to the sendSms operation of the SendSms interface, but the profile does not mandate support for sendSmsLogo or sendSmsRingtone. The profile does not change the operations themselves in any way, e.g. parameters, whether optional or mandatory, behaviour, etc.

### 4.1 Version 3.0

The OneAPI Profile of RESTful Network APIs V3.0 is a republication of the OneAPI Profile of ParlayREST V2.0 [ParlayREST\_OneAPI] as part of the suite of OMA RESTful Network APIs. Mainly structural changes to fit that suite, but also a few functional changes have been applied.

Version 3.0 of the OneAPI Profile of RESTful Network APIs defines subsets of the following APIs:

- RESTful Network API for Short Messaging V 1.0
- RESTful Network API for Messaging V 1.0
- RESTful Network API for Terminal Location V 1.0
- RESTful Network API for Payment V 1.0
- RESTful Network API for Device Capabilities V 1.0
- RESTful Network API for Terminal Status V 1.0
- RESTful Network API for Third Party Call V 1.0, Call Notification V 1.0 and Audio Call V 1.0 (jointly referred to as Call Control APIs)

as specified in this document.

The RESTful Network APIs for Messaging and Payment have undergone changes which make them different in details from their ParlayREST V2.0 counterparts. Further details can be found in the actual specifications.

### 4.2 Version 4.0

Version 4.0 of the OneAPI Profile of RESTful Network APIs adds subsets of the following APIs:

- RESTful Network API for Customer Profile V 1.0
- RESTful Network API for Anonymous Customer Reference Management V 1.0

as specified in this document.
