1. Scope

This specification provides the OneAPI profile of the RESTful bindings of Parlay X Web Services [REST_ERP].

The OneAPI profile of ParlayREST specifies a subset of the existing RESTful bindings of Parlay X SOAP Web Services. This specification contains tables with information on what interfaces are mandated in the profile that must be implemented in order to claim that the instance complies with the profile.

The GSMA OneAPI project is addressing deployment and operational considerations for 3rd party applications, and is re-using a subset of the Parlay X and ParlayREST Web Services APIs for this. It aims to reduce the effort and time needed to create applications and content that is portable across mobile operators.

4. Introduction

The OneAPI profile of ParlayREST defines a subset of the resources and HTTP methods in ParlayREST that must be supported by any entity conforming to the profile, plus the corresponding Parlay X interfaces and operations where appropriate. For example, for the SMS API the profile mandates support for resources and HTTP methods corresponding to the sendSms operation of the SendSms interface, but the profile does not mandate support for sendSmsLogo or sendSmsRingtone. The profile does not change the operations themselves in any way, e.g. parameters, whether optional or mandatory, behaviour, etc.

4.1 Version 1.0

The first version of the profile contains tables for SMS, MMS, Terminal location and Payment as specified in the following chapter.

4.2 Version 2.0

This version adds support for Device Capabilities, Terminal Status and Call Control.
