

# Enabler Release Definition for **Smartcard-Web-Server**

Approved Version 1.2 – 05 Mar 2013

---

**Open Mobile Alliance**

OMA-ERELD-Smartcard\_Web\_Server-V1\_2-20130305-A

Use of this document is subject to all of the terms and conditions of the Use Agreement located at <http://www.openmobilealliance.org/UseAgreement.html>.

Unless this document is clearly designated as an approved specification, this document is a work in process, is not an approved Open Mobile Alliance™ specification, and is subject to revision or removal without notice.

You may use this document or any part of the document for internal or educational purposes only, provided you do not modify, edit or take out of context the information in this document in any manner. Information contained in this document may be used, at your sole risk, for any purposes. You may not use this document in any other manner without the prior written permission of the Open Mobile Alliance. The Open Mobile Alliance authorizes you to copy this document, provided that you retain all copyright and other proprietary notices contained in the original materials on any copies of the materials and that you comply strictly with these terms. This copyright permission does not constitute an endorsement of the products or services. The Open Mobile Alliance assumes no responsibility for errors or omissions in this document.

Each Open Mobile Alliance member has agreed to use reasonable endeavors to inform the Open Mobile Alliance in a timely manner of Essential IPR as it becomes aware that the Essential IPR is related to the prepared or published specification. However, the members do not have an obligation to conduct IPR searches. The declared Essential IPR is publicly available to members and non-members of the Open Mobile Alliance and may be found on the “OMA IPR Declarations” list at <http://www.openmobilealliance.org/ipr.html>. The Open Mobile Alliance has not conducted an independent IPR review of this document and the information contained herein, and makes no representations or warranties regarding third party IPR, including without limitation patents, copyrights or trade secret rights. This document may contain inventions for which you must obtain licenses from third parties before making, using or selling the inventions. Defined terms above are set forth in the schedule to the Open Mobile Alliance Application Form.

NO REPRESENTATIONS OR WARRANTIES (WHETHER EXPRESS OR IMPLIED) ARE MADE BY THE OPEN MOBILE ALLIANCE OR ANY OPEN MOBILE ALLIANCE MEMBER OR ITS AFFILIATES REGARDING ANY OF THE IPR'S REPRESENTED ON THE “OMA IPR DECLARATIONS” LIST, INCLUDING, BUT NOT LIMITED TO THE ACCURACY, COMPLETENESS, VALIDITY OR RELEVANCE OF THE INFORMATION OR WHETHER OR NOT SUCH RIGHTS ARE ESSENTIAL OR NON-ESSENTIAL.

THE OPEN MOBILE ALLIANCE IS NOT LIABLE FOR AND HEREBY DISCLAIMS ANY DIRECT, INDIRECT, PUNITIVE, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES ARISING OUT OF OR IN CONNECTION WITH THE USE OF DOCUMENTS AND THE INFORMATION CONTAINED IN THE DOCUMENTS.

© 2013 Open Mobile Alliance Ltd. All Rights Reserved.

Used with the permission of the Open Mobile Alliance Ltd. under the terms set forth above.

## 3. Terminology and Conventions

### 3.1 Conventions

The key words “MUST”, “MUST NOT”, “REQUIRED”, “SHALL”, “SHALL NOT”, “SHOULD”, “SHOULD NOT”, “RECOMMENDED”, “MAY”, and “OPTIONAL” in this document are to be interpreted as described in [RFC2119].

All sections and appendixes, except “Scope”, “Release Version Overview” and “Conformance Requirements Notation Details”, are normative, unless they are explicitly indicated to be informative.

The formal notation convention used in sections 7 and 8 to formally express the structure and internal dependencies between specifications in the Enabler Release specification baseline is detailed in [SCR RULES].

### 3.2 Definitions

<b>Application</b>	The implementation of a well-defined and related set of functions that perform useful work on behalf of the user. It may consist of software and or hardware elements and associated user interfaces.
<b>BIP</b>	Bearer Independent Protocol as defined in [ETSI TS 102 223].
<b>Browser</b>	A program used to view (x) HTML or other media type documents.
<b>Content Provider</b>	An entity that provides data that forms the basis of a service.
<b>Device</b>	In this context, a Device is a voice and/or data terminal that uses a Wireless Bearer for data transfer. Device types may include (but are not limited to): mobile phones (GSM, CDMA, 3GSM, etc.), data-only terminals, PDAs, laptop computers, PCMCIA cards for data communication and unattended data-only Devices (e.g., vending machines). Smart Cards are not considered as part of the device within the context of the Smart Card Web Server.
<b>Enabler Release</b>	Collection of specifications that combined together form an enabler for a service area, e.g. a download enabler, a browsing enabler, a messaging enabler, a location enabler, etc. The specifications that are forming an enabler should combined fulfil a number of related market requirements.
<b>Minimum Functionality Description</b>	Description of the guaranteed features and functionality that will be enabled by implementing the minimum mandatory part of the Enabler Release.
<b>Network Operator</b>	An entity that is licensed and allocated frequency to operate a public mobile wireless telecommunications network for the purpose of providing publicly available commercial services.
<b>Smart Card</b>	A portable tamper resistant device with an embedded microprocessor chip. A Smart Card is used for storing data (e.g. access codes, user subscription information, secret keys etc.) and performing typically security related operations like encryption and authentication. A Smart Card may contain one or more network authentication applications like the SIM (Subscriber Identification Module), USIM, R-UIM (Removable – User Identification Module). In addition, the Smart Card refers to the smart card definition of [ETSI TR 102 216].
<b>Smart Card application</b>	An application that executes in the Smart Card.
<b>Smart Card issuer</b>	The entity that gives/sales the Smart Card to the user (e.g. network operator for a SIM card).
<b>UICC</b>	UICC is the Smart Card defined for the ETSI standard [ETSI TS 102 221]. It is a platform to resident applications (e.g. USIM, CSIM or ISIM).
<b>URI</b>	Uniform Resource Identifiers (URI, see [RFC1630]) provides a simple and extensible means for identifying a resource. URI syntax all widely used to address Internet resources over the web but is also adapted to local resources over a wide variety of protocols and interfaces.
<b>URL</b>	The specification is derived from concepts introduced by the World-Wide Web global information initiative, whose use of such objects dates from 1990 and is described in "Universal Resource Identifiers in WWW", [RFC1630]. The specification of URLs (see [RFC1738]) is designed to meet the requirements laid out in "Functional Requirements for Internet Resource Locators".
<b>User</b>	Person who interacts with a user agent to view, hear or otherwise use a resource.
<b>Web Page</b>	A document viewable by anyone connected to the page server who has a web browser.

**Web server** A server process running on a processor, which sends out web pages in response to HTTP requests from browsers.

### 3.3 Abbreviations

<b>APDU</b>	Application Protocol Data Units
<b>ERDEF</b>	Enabler Requirement Definition
<b>ERELD</b>	Enabler Release Definition
<b>OMA</b>	Open Mobile Alliance
<b>OMNA</b>	Open Mobile Naming Authority
<b>R-UIM</b>	Removable User Identity Module
<b>SCWS</b>	Smart Card Web Server
<b>TCP</b>	Transmission Control Protocol
<b>(U)SIM</b>	(Universal) Subscriber Identity Module

## 4. Release Version Overview

The Smart Card Web Server enabler defines the interfaces to an HTTP server in a smart card (i.e. Smart Card Web Server) that is embedded in a mobile device (e.g. SIM, (U)SIM, UICC, R-UIM, CSIM).

The main interfaces cover the following aspects:

- The URL to access the Smart Card Web Server (SCWS)
- The transport protocol that is used to enable the communication between HTTP applications in the device and the Smart Card Web Server
- The HTTP profile that the Smart Card Web Server needs to implement
- A secure remote administration protocol for the Smart Card Web Server
- User, or principal, authentication with the Smart Card Web Server and related security protocols

It is important to note that the Smart Card Web Server can be administrated only by the smart card issuer (e.g. Mobile Network Operator) or a delegated authorized entity. This clearly sets the scope of ownership and roles for the remote administration and services that are deployed via the Smart Card Web Server.

### 4.1 Version 1.0 Functionality

The Smart Card Web Server v1.0 enabler defines all the main requirements of an HTTP server implemented in a smart card, allowing an HTTP client running in the terminal (e.g. the browser) to access resources stored in the smart card. The content delivered by the SCWS can be static resources but also be generated by a smart card application. The SCWS 1.0 also defines the remote administration of the Smart Card Web Server by an authorized entity.

### 4.2 Version 1.1 Functionality

The Smart Card Web Server 1.1 enabler is a set of optimisations of the Smart Card Web Server 1.0 enabler and therefore does not introduce any new requirement or any change into the architecture. This enabler therefore refers to the requirements and architecture documents of the Smart Card Web Server 1.0 enabler.

The Smart Card Web Server v1.1 enabler improves the Smart Card Web Server v1.0 enabler mainly to optimise the remote management of the SCWS from different trusted entities. Each authorized entity is able to control what content and which smart card applications can be accessed under a given URI.

The Smart Card Web Server v1.1 also clarifies the cache management to improve the efficiency of the exchanges with the HTTP application in the terminal.

The Smart Card Web Server v1.1 has been updated to manage any type of resources allowing a SCWS implementation to be future proof using the `Content-Type`, `Content-Encoding` and `Content-Language` headers defined by the administration server.

The following other optimizations have been included:

- Deletion of a whole directory
- Management of multiple audit commands in the same administration request
- Addition of a cipher suite for PSK-TLS requesting only a signature
- Management of a default page when “abs\_path” is “/”

The following clarifications have been added:

- Behaviour when the card memory is full

- Behaviour when the SCWS doesn't support persistent connections

Finally the Smart Card Web Server v1.1 enabler clarifies the expected behaviour of the SCWS and of the Remote Administration server to ensure compatibility with former versions of the SCWS enabler.

### 4.2.1 Version 1.1.1 Functionality

The Smart Card Web Server 1.1.1 enabler provides corrections and clarifications on the Smart Card Web Server 1.1.

## 4.3 Version 1.2 Functionality

The Smart Card Web Server 1.2 enabler introduces the references to latest versions of TLS (i.e. [TLS 1.1] and [TLS 1.2]) and a new requirement confirming that another removable web server operating in the same terminal can be accessed.

The Smart Card Web Server 1.2 enabler also provides clarification on the implementation of the Smart Card Web Server when using TCP/IP transport Protocol.

The Smart Card Web Server 1.2 enabler introduces the notion of Granted Memory associated to a card administration agent. It allows restricting the amount of content associated to an authorized entity administrating the SCWS content.

To trigger a remote administration session, the Smart Card Web Server already defines the use of a secure SMS sent to a card administration agent. With the Smart Card Web Server 1.2 it is now possible to send this triggering message thanks to the OMA SIP Push Enabler.

With the increase of opened device operating systems, the Smart Card Web Server 1.2 sets the implementation of the Access Control Policy (ACP) mechanism as mandatory for the device.

## 5. Document Listing for SCWS

This section is normative.

Doc Ref	Permanent Document Reference	Description
<b>Requirement Document</b>		
[SCWS_RD]	OMA-RD-Smartcard_Web_Server-V1_2-20130305-A	Requirement Document for SCWS v1.2 Enabler
<b>Architecture Document</b>		
[SCWS_AD]	OMA-AD-Smartcard_Web_Server-V1_2-20130305-A	Architecture Document for SCWS v1.2 Enabler
<b>Technical Specifications</b>		
[SCWS_TS]	OMA-TS-Smartcard_Web_Server-V1_2-20130305-A	Specification that defines the protocols for the SCWS that provide control interface between the SCWS Client and SCWS Server and also between the SCWS server and a remote administration server.
<b>Supporting Files</b>		
(none)		

**Table 1: Listing of Documents in SCWS Enabler**

## 6. OMNA Considerations

The Smart Card Web Server 1.2 enabler includes the following OMNA item:

- PUSH Application Id:
  - a. Number: to be assigned after OMNA registration
  - b. URN: x-oma-application:push.scws
  - c. Description: Identifier of the SCWS Push Gateway to receive OMA SIP Push messages to trigger a SCWS remote administration session.

## 7. Conformance Requirements Notation Details

This section is informative

The tables in following chapters use the following notation:

- Item:** Entry in this column **MUST** be a valid ScrItem according to [SCRRULES].
- Feature/Application:** Entry in this column **SHOULD** be a short descriptive label to the **Item** in question.
- Requirement:** Expression in the column **MUST** be a valid TerminalExpression according to [SCRRULES] and it **MUST** accurately reflect the architectural requirement of the **Item** in question.

## 8. ERDEF for SCWS - Client Requirements

This section is normative.

The Client is an application running in the Device that connects to the SCWS (Smart Card Web Server).

Item	Feature / Application	Requirement
OMA-ERDEF-SCWS-C-001-M	SCWS Client	[SCWS-TS]: MCF

**Table 2: ERDEF for SCWS Client-side Requirements**

## 9. ERDEF for SCWS - Server Requirements

This section is normative.

Item	Feature / Application	Requirement
OMA-ERDEF-SCWS-S-001-M	SCWS Server	[SCWS-TS]: MSF

**Table 3: ERDEF for SCWS Server-side Requirements**

## 10.ERDEF for SCWS – Admin Client Requirements

This section is normative.

The Admin Client is an application running in the smart card that connects to a remote administration server in order to receive administration commands that are addressed to the SCWS.

Item	Feature / Application	Requirement
OMA-ERDEF-SCWS-admin-C-001-M	SCWS Admin Client	[SCWS-TS]: MCF (admin)

**Table 4: ERDEF for SCWS Admin Client-side Requirements**

## 11.ERDEF for SCWS – Remote Admin Server Requirements

This section is normative.

The Admin Server is a remote administration server that sends administration commands to the SCWS via the Admin Client in the smart card.

Item	Feature / Application	Requirement
OMA-ERDEF-SCWS-admin-S-001-M	SCWS Remote Admin Server	[SCWS-TS]: MSF (admin)

**Table 5: ERDEF for SCWS Remote Admin Server-side Requirements**

## 12.ERDEF for SCWS – Device Requirements

This section is normative.

The Device in which the SCWS Client (application that connects to the SCWS) is running.

Item	Feature / Application	Requirement
OMA-ERDEF-SCWS-Device-001-M	Device	[SCWS-TS]: MDF (D-stands for Device)

**Table 6: ERDEF for SCWS ME Requirements**

## Appendix A. Change History (Informative)

### A.1 Approved Version History

Reference	Date	Description
OMA-ERELED-Smartcard_Web_Server-V1_2-20130305-A	05 Mar 2013	Status changed to Approved by TP TP Ref # OMA-TP-2013-0078-INP_SCWS_V1.2_ERP_for_Final_Approval
