3. Terminology and Conventions

3.1 Conventions

The key words “MUST”, “MUST NOT”, “REQUIRED”, “SHALL”, “SHALL NOT”, “SHOULD”, “SHOULD NOT”, “RECOMMENDED”, “MAY”, and “OPTIONAL” in this document are to be interpreted as described in [RFC2119].

All sections and appendixes, except “Scope” and “Introduction”, are normative, unless they are explicitly indicated to be informative.

The formal notation convention used in sections 9 and 10 to formally express the structure and internal dependencies between specifications in the Enabler Release specification baseline is detailed in [SCRRULES].

3.2 Definitions

Enabler Release Collection of specifications that combined together form an enabler for a service area, e.g. a download enabler, a browsing enabler, a messaging enabler, a location enabler, etc. The specifications that are forming an enabler should combined fulfil a number of related market requirements.

Minimum Functionality Description Description of the guaranteed features and functionality that will be enabled by implementing the minimum mandatory part of the Enabler Release.

3.3 Abbreviations

ERDEF	Enabler Requirement Definition
ERELD	Enabler Release Definition
IETF	Internet Engineering Task Force
IM	Instant Messaging
MSRP	Message Session Relay Protocol
OMA	Open Mobile Alliance
SIP	Session Initiation Protocol
XDM	XML Document Management

4. Introduction

This document outlines the Enabler Release Definition for SIMPLE IM version 1.0 and the respective conformance requirements for SIMPLE IM clients and servers implementations claiming compliance to it as defined by Open Mobile Alliance across the specification baseline.

Instant Messaging (IM) is a set of capabilities allowing exchange of Instant Messaging messages between users in near real-time, whether using mobile networks or fixed Internet connections. The SIMPLE IM enabler uses the IETF SIP protocol [RFC3261] with SIMPLE extensions. SIMPLE IM features are described in terms of actions taken by IM Clients and Servers. The SIMPLE IM enabler relies on common OMA enablers such as Presence [OMA_Pres], XDM [OMA_X1, OMA_X2], Device Management Services [OMA_DM] to provide complementary features and capabilities.

The SIMPLE IM enabler includes the following capabilities:

- Session based IM capabilities:
 - Requires a SIP session to be established before exchanging instant messages. Uses SIP to setup a session and MSRP to exchange instant messages between clients.
- Pager mode messaging:
 - Independent Instant messages can be sent and received without requiring a session between the users. Uses SIP MESSAGE to exchange instant messages.
- Large message mode: Allows the exchange of arbitrarily large and independent instant messages. Uses MSRP and SIP to setup the MSRP session. Once the (large) instant message has been transferred from the sender to the receiver, the session is closed. Large message mode is a form of pager mode but makes use of a session oriented protocol.
- Various content types, including:
 - Text
 - Audio clips/files
 - Video clips/files
- One-to-one and group conversations
- Group conversation includes both:
 - Predefined group: Created either by a service provider or a user
 - Ad hoc group:
 - Does not require prior creation of the group before sending messages
 - Group created dynamically just prior to sending a message
- File transfer to transfer files during an IM session
- Deferred messaging to allow a user to retrieve his/her messages received when he/she was not online
- Conversation history: To record a conversation on the server
- Charging
- Interaction with XML Document Management (XDM) for accessing:
 - User's profile to create communities
 - Group repository
 - Contact lists, black and white lists
- Interaction with the presence server for:
 - Retrieving and update user/client online status
- Other functionalities include:
 - Operator-specific system messages
 - Lawful Interception

5. Description of Differences from Previous Version

This version is the initial version of the enabler release.

7. Minimum Functionality Description for SIMPLE IM

This section is informative.

The minimum mandatory functionalities for IM client are:

1. Session mode:
 - a. Establishing one-to-one session
 - b. Establishing an ad hoc group
 - c. Establishing a pre-defined group
 - d. Leaving a session
 - e. Sending and receiving instant messages
2. Large message mode:
 - a. Sending an receiving large messages
 - b. Sending large messages to an ad-hoc group
 - c. Sending large messages to a pre-defined group
3. Pager mode
 - a. Sending an receiving messages
 - b. Sending messages to an ad-hoc group
 - c. Sending messages to a pre-defined group
4. Deferred messaging
 - a. Receiving notifications of deferred messages
 - b. Retrieving deferred messages
 - c. Deleting deferred messages
5. File transfer
6. Creation and management of contact lists
7. Supporting of content types as per 3GPP TS 26.141 [3GPP_TS26141]

The minimum mandatory functionalities for IM server are

1. Session mode
2. Large message mode
3. Pager mode
4. Support deferred messaging
5. Supporting of content types [3GPP_TS26141]

External mandatory enabler dependencies:

1. XDM v1.0 and v 2.0 [OMA_X1, OMA_X2]
2. Device management [OMA_DM]

8. Conformance Requirements Notation Details

This section is informative

The tables in following chapters use the following notation:

- Item:** Entry in this column MUST be a valid ScrItem according to [SCRRULES].
- Feature/Application:** Entry in this column SHOULD be a short descriptive label to the **Item** in question.
- Status:** Entry in this column MUST accurately reflect the architectural status of the **Item** in question.
- M means the **Item** is mandatory for the class
 - O means the **Item** is optional for the class
 - NA means the **Item** is not applicable for the class
- Requirement:** Expression in the column MUST be a valid TerminalExpression according to [SCRRULES] and it MUST accurately reflect the architectural requirement of the **Item** in question.
